DEPT. OF EDUCATIONAL RESEARCH
UNIVERSITY OF TORONTO

OTTAWA
J. O. PATENAUDE, I.S.O.,
KING'S PRINTER
1935

*Copies may be obtained from the King's Printer at $1.50 each.

PREFACE.

The Canada Year Book had its beginning in the first year of the Dominion, when the "Year Book and Almanac of British North America"—being (to quote its sub-title) "an Annual Register of political, vital and trade statistics, customs tariffs, excise and stamp duties, and all public events of interest in Upper and Lower Canada, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, and West Indies"—was founded. Subsequently the title was changed to "The Year Book and Almanac of Canada,—an annual statistical abstract of the Dominion and a register of legislation and of public men in British North America". It was published annually from 1867 to 1879.

In 1886, after the passing of a general Statistics Act, the "Statistical Abstract and Record of Canada" was instituted as an official book of reference respecting the institutions, population, finance, trade and general conditions of the Dominion, "with comparative data for the United Kingdom, British Possessions and foreign countries". The work was prepared in the General Statistical Office of the Department of Agriculture, and was continued annually until 1904, under the direction of Dr. George Johnson, F.S.S. In 1905 the General Statistical Office was amalgamated with the Census Office (which was at the same time made a permanent organization), and the Year Book was remodelled by Dr. Archibald Blue, Chief Officer, and continued under the title "The Canada Year Book, Second Series".

In the reorganization and centralization of statistics which followed the report of the Royal Commission on Statistics of 1912, and the establishment of the Dominion Bureau of Statistics in 1918, the improvement of the Year Book, both in content and method of presentation, was made a primary object, and this progress has been continued down to the present time.

A prominent feature in past editions of the Year Book has been the inclusion from time to time of special articles dealing with some important phase of Canadian social, economic, intellectual or artistic life in considerable detail, but the pressure on the space of the present volume owing to the necessity of covering two years has prevented the inclusion of any special articles in this edition, although a list of special articles appearing in past editions is given on page vi of this Introduction immediately preceding the map.

Attention may be called to certain novel features of the present volume. There is included in Chapter I a brief description of Standard Time and Time Zones in Canada, which is of special interest to those who travel either in the flesh or by radio. There will also be found in Chapter III a discussion of the Representation Act of 1933 and a special table at page 82 showing the population of each of the new electoral districts which will return representatives to Parliament at the approaching general election. Probably the most extended presentation of the results of the Census of 1931 that will appear in the Year Book is to be found in Chapter IV, where Religions (Section 6) are cross-analysed by racial origin for the first time, and several new classifications are added to Section 7 dealing with Birthplaces; the chapter closes with statistics of the areas and populations of countries of the British Empire for the years 1911, 1921 and 1931 and of the countries of the world for 1931. The Mines and Minerals Chapter, together with the discussion of the new discoveries in economic geology in Chapter I, will be of interest to those who are concerned with this rapidly-growing branch of our economic life. Again, attention may be directed to the improvement of the introduction to the External

Trade Chapter as well as to the final statistics of the Census of Distribution and Services of 1930, to which has been added a more summary treatment of retail trade based upon a 65 to 70 p.c. sample of all retail trade and covering the years 1931 to 1933. In the Labour and Wages Chapter may be noted the inclusion of tables showing both the occupational and the industrial distribution of the gainfully occupied population of the Dominion as in 1931. In the Public Finance Chapter appears, for the first time, a comparative analysis of provincial revenues, expenditures, assets and liabilities on the basis agreed upon at the Dominion-Provincial Conference of 1933; additional material regarding national income is also included in this chapter. The Currency and Banking Chapter includes a description of the new Bank of Canada and a classification of bank loans by industries and of deposits by amounts. Lastly, in the Miscellaneous Administration Chapter there appears a study of liquor control, liquor sales and revenues arising therefrom.

Throughout the volume tables and text alike have been revised so as to include the latest possible information appearing to the date of going to press. The Appendices include information on Immigration and Trade in the fiscal year 1934-35. All parts of the volume have been subjected to careful revision by the most competent authorities in each branch of our national activities.

The present volume has been edited by S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., assisted by A. E. Millward, B.A., B. Com., W. H. Lanceley, and R. F. Clarke, M.C., D.L.S., of the editorial staff of the General Statistics Branch of the Bureau. Grateful acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments who have assisted in the collection of information. An effort has been made to apportion due credit to the various individuals and services concerned by means of footnotes to those chapters and sections which have been contributed, or in the compilation of which co-operation has been received.

While the greatest care has been taken in the preparation of the volume, there are doubtless imperfections and, with a view to the improvement of future editions, the Editor will be glad to hear of any errors which may have escaped his notice, and to receive any suggestions with regard to omissions or to method of treatment.

DOMINION BUREAU OF STATISTICS,
OTTAWA, June 4, 1935.

R. H. COATS,
Dominion Statistician.

SYNOPSIS.

CHAPTER I.—PHYSIOGRAPHY.

	Page.
Part I.—Geographical Features	1–18
1. Land and Fresh-Water Area of Canada, by Provinces and Territories, as in 1934.	7
Section 1. *Orography*	7–12
2. Mountain Peaks over 11,000 feet in Elevation, with Latitude and Longitude	11–12
Section 2. *Rivers and Lakes*	12–17
3. Drainage Basins of Canada	13
4. Lengths of Principal Rivers and Tributaries in Canada	14
5. Areas, Elevations and Depths of the Great Lakes	15
6. Areas of Principal Canadian Lakes, by Provinces	15–17
Section 3 *Islands*	17–18
Part II.—Geology	18–38
Section 1. *Geology of Canada*	18–28
Subsection 1. Topography	18–23
Subsection 2. Geology	23–28
Section 2. *Economic Geology of Canada, 1932 and 1933*	29–38
Part III.—Seismology in Canada	38
Part IV.—The Flora of Canada	38
Part V.—Faunas of Canada	38
Part VI.—The Natural Resources of Canada	38–48
7. Area of Occupied and Estimated Potential Agricultural Lands in the Nine Provinces and in all Canada, 1931, with Estimated Land Area, 1935	39
8. Classification of Forest Land in Canada, 1933	41
9. Details Regarding Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1935	47–48
Part VII.—Climate and Meteorology	49–53
Section 1. *The Climate of Canada*	49
Section 2. *The Factors which Control Canadian Weather*	49
Section 3. *The Distribution of Precipitation in Canada*	49
Section 4. *The Temperature and Precipitation of Northern Canada*	49
Section 5. *The Meteorological Service of Canada*	49
Section 6. *Meteorological Tables*	49
Section 7. *Droughts in Western Canada*	49
Section 8. *Standard Time and Time Zones in Canada*	50–53

CHAPTER II.—HISTORY AND CHRONOLOGY.

Part I.—History	54
Part II.—Chronology, 1497 to 1934	54–63

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

Part I.—Constitution and General Government	65
Part II.—Provincial and Local Government	65
Part III.—Legislative and Executive Authorities	65–91
Section 1. *Dominion Parliament and Ministry*	65–85
Subsection 1. The Governor General of Canada	66
1. Governors General of Canada, 1867–1935	66
Subsection 2. The Ministry	66–70
2. Ministries since Confederation and Members of the Fifteenth Ministry	67
3. Members of the King's Privy Council for the Dominion of Canada, according to Seniority Therein, as at Mar. 1, 1935	68
4. Duration and Sessions of Dominion Parliaments, 1867–1935	69–70
Subsection 3. The Senate	70–73
5. Growth of Representation in the Senate, 1867–1934	72
6. Representation in the Senate of Canada, by Provinces, as at Mar. 1, 1935	72–73
Subsection 4. The House of Commons	73–84
7. Representation in the House of Commons as at Dominion General Elections 1867–1930	75
8. Representation of the Provinces and Territories of Canada in the House of Commons, as determined by the Censuses of 1931, 1921 and 1911	76
9. Populations of Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Seventeenth General Election	78–82
10. Populations of Electoral Districts according to the Representation Act of 1933	82–84
Subsection 5. The Dominion Franchise	84–85
11. Number of Voters and Votes Polled in the General Elections of 1921, 1925, 1926 and 1930	85

CHAPTER III.—CONSTITUTION AND GOVERNMENT—concluded.

PAGE.

Part III.—Legislative and Executive Authorities—concluded.
Section 2. *Provincial Governments* ... 86–91
12. Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation and Legislative Process by which Admission was Effected ... 86
13. Lieutenant-Governors of Provinces, 1867–1934, and Present Ministries ... 87–91

Part IV.—Representatives in Other Countries ... 91–95
Section 1. *Representatives within the Empire* ... 91–94
Section 2. *Representatives outside the Empire* ... 94–95

Part V.—Canada and The League of Nations ... 95–97

CHAPTER IV.—POPULATION.

Section 1. *Census Statistics of General Population* ... 98–111
1. Population of Canada, by Provinces and Territories, in the Census Years 1871 to 1931 ... 99
2. Percentage Distribution of Canadian Population, by Provinces and Territories, 1871 to 1931 ... 99
3. Population of Canada, by Provinces and Territories, in 1871 and 1931, Numerical Increase in each Decade from 1871 to 1931 and Total Increase ... 99
4. Population of Canada, by Provinces and Territories, in 1871, and Increase Per Cent, by Decades, from 1871 to 1931 ... 100
5. Population of Canada, by Provinces and Counties, or Census Divisions, 1871–1931 ... 103–106
6. Area and Density of Population of Canada, by Provinces, 1901–31 ... 108
7. Area and Density of Population, by Counties or Census Divisions, 1931 ... 109–110
8. Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration for the Inter-Censal Periods 1901–11, 1911–21 and 1921–31 ... 111
Section 2. *Sex Distribution* ... 111–113
9. Sex Distribution of the People of Canada, by Provinces, 1871–1931 ... 112
10. Proportion of Sexes per 1,000 of Population in Canada, by Provinces, 1871–1931 ... 113
11. Masculinity of the Populations of Various Countries in Recent Years ... 113
Section 3. *Conjugal Condition* ... 114–116
12. Conjugal Condition of the Population, by Numbers and Percentages, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921 and 1931 ... 114
13. Conjugal Condition of the People of Canada Classified as Single, Married, Widowed, Divorced, and Not Given, by Provinces and Sex, 1931 ... 115
14. Conjugal Condition of the People, 15 Years of Age and Over, 1931 ... 115–116
Section 4. *Age Distribution* ... 117–120
15. Proportion per 1,000 of the Population by Age Periods, 1871, 1881, 1891, 1901, 1911, 1921 and 1931 ... 117
16. Proportion per 1,000 of the Population by Age Periods, by Provinces, 1931, with Totals for 1921 ... 117
17. Male and Female Population of Canada, by Age Periods, 1881, 1891, 1901, 1911, 1921 and 1931 ... 118
18. Quartile and Decile Ages of the Populations of Canada at each of the Decennial Censuses, by Sex, 1881–1931 ... 120
Section 5. *Racial Origins* ... 120–124
19. Origins of the People According to the Censuses of 1871, 1881, 1901, 1911, 1921 and 1931 ... 122
20. Percentage which the People of Each Origin Formed of the Total Population, According to the Censuses of 1871, 1881, 1901, 1911, 1921 and 1931 ... 123
21. Racial Origins of the Population, by Provinces and Territories, Census of 1931 ... 124–125
Section 6. *Religions* ... 124–131
22. Religions of the People at each Decennial Census, 1871–1931 ... 126
23. Percentages of Specified Religions at each Decennial Census, 1871–1931 ... 127
24. Religions of the People, by Provinces, Census of 1931 ... 128–129
25. Religions of the People Classified by Racial Origin, 1931 ... 130–131
Section 7. *Birthplaces* ... 131–140
26. Birthplaces of the Population of Canada, According to the Censuses of 1871–1931 ... 132
27. Population Classified by Sex and Nativity, by Provinces and Territories, 1931, with Totals for 1911 and 1921 ... 132
28. Birthplaces and Percentage Distributions of the Populations of Canada, Censuses 1911–31, together with Percentage Increase in each Decade, 1901–31 ... 133–134
29. Numbers and Percentages of the Canadian-Born Population Classified by Province of Residence, by Province of Birth, 1931 ... 135
30. Population Classified by Nativity of Parents, by Provinces, 1931 ... 136
31. Canadian-Born Population Classified According to Nativity of Parents, by Racial Origin, 1931 ... 138–139
32. Population other than Canadian Born, Classified by Provinces, According to Year of Arrival in Canada, Rural and Urban, 1931 ... 140
Section 8. *Citizenship and Naturalization* ... 141–144
33. Citizenship of Native-Born, British-Born, and Foreign-Born Residents in Canada in 1931, by Sex, According to Country of Allegiance ... 142–143
34. Numbers and Percentages of Naturalized and Alien Persons among the Foreign-Born Residents of Canada, by Countries of Birth, 1901, 1911, 1921 and 1931 ... 144
Section 9. *Language Spoken and Mother Tongue* ... 145–146
35. Population of Canada Speaking One, Both or Neither of the Official Languages of Canada, Classified by Racial Origin, 1931 ... 145
36. Mother Tongues of the Total Population of Canada, by Provinces, 1931 ... 146

CHAPTER IV.—POPULATION—concluded.

PAGE.

Section 10. *Rural and Urban Population* 146–157
37. Rural and Urban Populations, by Sex and by Provinces, 1921 and 1931 147
38. Rural and Urban Populations, by Provinces and Territories, Decennial Censuses 1891–1931 and Numerical Increases 1921–1931 149
39. Percentage Distribution of Rural and Urban Populations, by Provinces and Territories, 1891, 1901, 1911, 1921 and 1931 150
40. Urban Populations of Canada, Divided by Size of Municipality Groups, 1911, 1921 and 1931 150
41. Populations of Cities and Towns having over 5,000 Inhabitants in 1931, Compared with 1871–81–91–1901–11–21 151–153
42. Populations of Towns and Villages having between 1,000 and 5,000 Inhabitants in 1931, Compared with 1901, 1911 and 1921 153–156
43. Rural and Urban Farms, Farm Populations and Average Numbers of Persons per Farm, by Provinces, 1931 156

Section 11. *Literacy* 157–160
44. Ability to Read and Write of the Population 5 Years of Age and Over, by Provinces, for each Census Year 1901–31 157–158
45. Literacy of the Population of 10 Years of Age and Over, by Sexes and Provinces, 1931 159
46. Literacy of the Populations of 10 Years of Age and Over in Cities and Towns of 30,000 and Over, by Numbers and Percentages, 1931 160

Section 12. *School Attendance* 161–163
47. Numerical and Percentage Distributions of School Attendance of the Population 5–19 Years of Age Inclusive, by Sexes, for all Canada, 1911, 1921 and 1931 161–162
48. Total Rural and Urban Populations of All Ages Attending School, by Sex, 1931.. 162
49. Numerical and Percentage Distributions of the School Attendance of the Population of Canada, 7–14 Years of Age, by Nativity and Sex, 1931 163

Section 13. *Annual Estimates of Population* 163–164
50. Estimates of the Populations of Canada for Inter-Censal Years, by Provinces, 1867–1934 164

Section 14. *Area and Population of the British Empire* 165–167
51. Area and Population of the British Empire, by Continents and Countries, 1911, 1921 and 1931 165–167

Section 15. *Area and Population of the World* 168–169
52. Area and Population of the World, by Continents and Countries, 1931 168–169

CHAPTER V.—VITAL STATISTICS.

Section 1. *Natural Increase* 172–176
1. Summary of Births, Marriages, Deaths and Natural Increase, by Provinces, for the calendar years 1931–33, with Averages 1921–25 and 1926–30 174
2. Summary of Births, Marriages, Deaths and Natural Increase, in Cities and Towns of 10,000 Population and Over, 1931–32 175–176
3. Births, Deaths and Natural Increase in Canada, by Provinces and for each Sex, with Totals, 1931–33 and Average 1926–30 176

Section 2. *Births* 177–186
4. Numbers of Live Births and Birth Rates, by Provinces, 1931–33, with Averages, 1921–25 and 1926–30 177
5. Live Births in Cities and Towns of 10,000 Population and Over, 1929–33 178
6. Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1931–32 179
7. Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, for Canada and by Provinces, 1931–33, with Averages for 1921–25 and 1926–30 .. 180
8. Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1926, 1930–32 181
9. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1931 182
9A. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1932 182
10. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1931 183
10A. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1932 184
11. Numbers of Illegitimate Births, Classified by Age of Mother, with the Percentages to Total Live Births, by Provinces, 1931 and 1932, with Totals for 1931–33 184–185
12. Stillbirths by Age of Mother and Legitimacy of Child in 1931 and 1932, with Totals for 1931–33 185
13. Crude Birth Rates of Various Countries in Recent Years 186

Section 3. *Marriages and Divorces* 186–191
Subsection 1. Marriages 186–190
14. Numbers of Marriages and Marriage Rates, by Provinces, 1931–33 with Averages for 1921–25 and 1926–30 187
15. Differences in Ages of Bridegrooms and Brides, 1931 and 1932 187
16. Average Ages of Parties Contracting Marriages, by Provinces, 1931 and 1932.... 188
17. Nativity of Persons Married in Canada, by Provinces, 1931 and 1932 with Averages for 1921–25 and 1926–30 189
18. Crude Marriage Rates of Various Countries in Recent Years 190
Subsection 2. Divorces 190–191
19. Statistics of Divorces Granted in Canada, 1911–33 191

CHAPTER V.—VITAL STATISTICS—concluded.

PAGE.

Section 4. *Deaths*..... 191–210
Subsection 1. General Mortality..... 192–201
20. Deaths and Death Rates, by Provinces, 1931–33, with Averages 1921–25 and 1926–30..... 192
21. Distribution of Deaths in Canada by Sex and Certain Age Groups, Numbers and Percentages, 1931–32..... 193
22. Quartile and Decile Ages of Decedents, by Sex, 1926, 1931 and 1932..... 194
23. Crude and Adjusted Death Rates in Canada, by Provinces, 1921–32..... 195–196
24. Deaths in Canada, by Principal Causes, 1928–33..... 197
25. Death Rates per 100,000 Population in Canada, by Principal Causes, 1928–33..... 197–199
26. Total Deaths (Exclusive of Stillbirths) in Cities and Towns of 10,000 Population and Over, 1929–33..... 199–200
27. Crude Death Rates of Various Countries in Recent Years..... 201
Subsection 2. Infantile and Maternal Mortality..... 201–210
28. Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931–33 with Averages for 1921–25 and 1926–30..... 202
29. Infantile Mortality in Canada by Principal Causes of Death, 1926, 1931–33..... 202–203
30. Proportion per 1,000 Deaths of Infants under 1 Year of Age Occurring at each Age Period, 1931–32..... 204
31. Deaths and Death Rates of Children Under One Year of Age (Exclusive of Stillbirths) in Cities and Towns of 10,000 and Over, 1930–33..... 205
32. Infantile Mortality per 1,000 Live Births in Various Countries of the World and Provinces of Canada in Recent Years..... 206
33. Infantile Mortality per 1,000 Live Births in Great Cities of the World in 1932 or the Most Recent Year..... 207
34. Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1926–32..... 208
35. Maternal Deaths in each Province, by Age Groups, 1932 and 1933, with Totals and Rates per 1,000 Live Births for 1931–33 and Five-Year Averages for 1921–25 and 1926–30..... 208–209
36. Maternal Deaths in each Province, by Causes of Death, 1932..... 209
36A. Maternal Deaths in each Province, by Causes of Death, 1933..... 210

CHAPTER VI.—IMMIGRATION AND COLONIZATION.

Section 1. *Statistics of Immigration*..... 211–228
1. Number of Immigrants Settling in Canada in each of the calendar years 1867–80 212
2. Number of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar or fiscal years ended 1881–1934..... 213
3. Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, fiscal years ended Mar. 31, 1933 and 1934..... 213–214
4. Sex Distribution of Immigrants as Adult Males, Adult Females and Children, fiscal years ended Mar. 31, 1911–34..... 214
5. Racial Origins of Immigrants into Canada, fiscal years ended Mar. 31, 1928–34 215
6. Languages of Immigrants Ten Years of Age and Over, fiscal years ended Mar. 31, 1928–34..... 216
7. Nationalities of Immigrants, fiscal years ended Mar. 31, 1929–34..... 217
8. Countries of Birth of Immigrants, fiscal years ended Mar. 31, 1929–34..... 218
9. Immigrants Arriving in Canada, by Chief Ports of Arrival, fiscal years ended Mar. 31, 1928–34..... 219
10. Destinations of Immigrants into Canada, by Provinces, fiscal years ended June 30, 1901–06, and Mar. 31, 1907–34..... 219–220
11. Occupations and Destinations of Immigrants Arriving in Canada, fiscal years ended Mar. 31, 1933 and 1934..... 220–221
12. Rejections of Immigrants upon Arrival at Ocean Ports, by Principal Causes and Nationalities, fiscal years ended 1923–34, with Totals 1903–22 and 1903–34.... 222
13. Deportations of Immigrants after Admission, by Principal Causes and by Nationalities, fiscal years ended 1923–34, with Totals 1903–22 and 1903–34... 223
14. British Juvenile Immigrants, fiscal years ended 1901–34..... 223
15. Record of Oriental Immigrants, fiscal years ended 1901–34..... 224
16. Record of Chinese Immigrants, fiscal years ended Mar. 31, 1912–34, with Totals 1886–1900 and 1901–11..... 225
17. Expenditures on Immigration in the fiscal years ended June 30, 1868–1906 and Mar. 31, 1907–34..... 226
18. Canadians Returned from the United States, fiscal years ended Mar. 31, 1925–34 227
19. Returning Canadians and Other Non-Immigrants entering Canada *via* Ocean Ports, by Class of Travel, fiscal years ended Mar. 31, 1933 and 1934, with Totals for fiscal years 1926–32..... 228
Section 2. *Colonization Activities*..... 228–229

CHAPTER VII.—SURVEY OF PRODUCTION.

Section 1. *The Leading Branches of Production in 1933*..... 232–234
1. Gross and Net Values of Production in Canada, by Industries, 1928–32..... 233
2. Detailed Itemized Statement of the Net Values of Production in Canada during 1930, 1931 and 1932..... 234
Section 2. *The Provincial Distribution of Production*..... 235–236
3. Gross and Net Values of Production in Canada, by Provinces, 1928–32..... 236
Section 3. *Leading Branches of Production in each Province, 1932*..... 236–241
4. Gross and Net Values of Production in Canada, by Industries and Provinces, 1932 238–239

CHAPTER VII.—SURVEY OF PRODUCTION—concluded.

PAGE.

4A. Gross and Net Values of Production in Canada, by Industries and Provinces, 1931 239-240
5. Percentage of the Value of the Net Production in each Industry to the Total Net Production of each Province, 1932 240-241
5A. Percentage of the Value of the Net Production in each Industry to the Total Net Production of each Province, 1931 241

CHAPTER VIII.—AGRICULTURE.

Section 1. *The Government in Relation to Agriculture* 242-252
Subsection 1. The Dominion Department of Agriculture 242-244
Subsection 2. Provincial Departments of Agriculture 244-246
Subsection 3. Dominion and Provincial Agricultural Experimental Stations 246-252
(A) Dominion Experimental Farms and Stations 247-252
(B) Provincial Agricultural Colleges and Experimental Stations 252
Section 2. *Statistics of Agriculture* 253-310
Subsection 1. Agricultural Revenue and Wealth 254-257
1. Estimated Gross Annual Agricultural Revenue of Canada, Itemized by Provinces, 1929-33 254-256
2. Estimated Gross Agricultural Wealth of Canada, by Provinces, 1933 256
Subsection 2. Acreages, Yields and Values of Field Crops 257-270
3. Acreages, Yields and Values of Principal Crops Grown in Canada, 1925-34 257-259
4. Total Acreages and Values of Field Crops in Canada, by Provinces, 1929-34 259
5. Field Crops of Canada, Compared as to Quantity and Value, 1933 and 1934 260
6. Acreages, Yields and Values of Principal Field Crops of Canada, Itemized by Provinces, 1933 and 1934 260-266
7. Estimated Acreages under Pasture in Canada, 1928-34 266
8. Annual Average Yields per Acre of Field Crops for Canada, 1927-34, with Long-Time Averages 267
9. Areas and Yields of Wheat, Oats, Barley, Rye and Flaxseed in the Prairie Provinces, 1932-34 268
10. Stocks of Grain in Farmers' Hands on July 31, 1934, as Compared with July 31, 1933 and 1932, with Totals of Production of the Previous Crops 268
11. Detailed Stocks of Grain in Canada on July 31, 1932, 1933 and 1934 269
12. Distribution of the Canadian Wheat Crops, by crop years, 1932-33 and 1933-34 269
13. Distribution of the Canadian Oat Crops, by crop years, 1932-33 and 1933-34 270
Subsection 3. Farm Live Stock and Poultry 270-274
14. Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931 270
15. Estimated Numbers and Values of Farm Live Stock in Canada, by Provinces, 1931-34 271-272
16. Average Values per Head of Farm Live Stock in Canada, as Estimated by Crop Correspondents, 1925-34 272-273
17. Estimated Numbers and Values of Farm Poultry in Canada, 1933 and 1934 273-274
18. Estimated Quantities and Values of Canadian Wool Clip, 1915-34 274
Subsection 4. Dairying Statistics—See Appendix II, pp. 1210-1212
Subsection 5. Fur Farming 275-278
19. Numbers of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1925-33 276
20. Values of Fur-Bearing Animals on Fur Farms in Canada, at Dec. 31, 1925-33 276
21. Values of Fur-Bearing Animals Sold from Fur Farms in Canada, 1925-33 277
22. Values of Pelts Sold from Fur Farms in Canada, 1925-33 277
23. Numbers of Fur Farms, Values of Land and Buildings and Values of Fur-Bearing Animals, by Provinces, 1931-33 278
Subsection 6. Horticulture 278-282
24. Fruit Trees, of Bearing Age and not of Bearing Age, and Acreages of Fruit in Canada, 1911, 1921 and 1931 279
25. Numbers of Farms in Canada Reporting Orchards, According to Size of Farm and Number of Trees Reported, 1931 279
26. Quantities and Values of the Production of Tree Fruits and Small Fruits in Canada, 1910, 1920 and 1930 280
27. Areas, Quantities and Values of Vegetables Produced for Sale on Farms in Canada, 1920 and 1930 281
28. Estimated Quantities and Values of Commercial Fruit Production in Canada, 1932-33 281
29. Numbers and Values of Fruit Trees, Bushes and Plants, Sold by Nurserymen in Canada, years ended May 31, 1930-33 282
30. Quantities and Values of Floricultural and Decorative Plants Grown in Canada and Sold during the year ended May 31, 1933 282
Subsection 7. Special Agricultural Crops 282-285
31. Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1932-34 283
32. Acreages, Yields and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1924-33 283
33. Acreages and Yields of Tobacco in Canada, by Provinces, 1900, 1910, 1911 and 1920-33 284
34. Acreages, Yields and Values of Flax Fibre, etc., in Canada, 1915-34 284
35. Numbers of Hives of Bees and Quantities and Values of Honey Produced in Canada, as Recorded at the Censuses of 1921 and 1931 285
Subsection 8. Farm Labour and Wages 286-287
36. Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930 and 1932-34 286-287

CHAPTER VIII.—AGRICULTURE—concluded.

PAGE.

Subsection 9. Prices of Agricultural Produce 287–295
37. Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flax and Rye—basis, in store at Fort William and Port Arthur—1933–34, and Yearly Average Prices for crop years ended July 31, 1926–34 288
38. Yearly Average Prices of Home-Grown Wheat, Barley and Oats in England and Wales, 1902–34 288
39. Monthly Average Prices of Flour, Bran and Shorts at Principal Markets, 1933 and 1934 289
40. Yearly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1932 and 1933 290
41. Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1933 291
41A. Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1934 292
42. Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1913–34 294
Subsection 10. Agricultural Statistics of the Census 295–301
43. Tenure of Farms by Numbers and Areas, Farm Values, Mortgages and Indebtedness and Farm Expenditures, by Provinces, Census of 1931 296–297
44. Farm Population, Workers, Weeks of Hired Labour and Cost of Labour, by Provinces, Census of 1931 299
45. Farm Machinery, Facilities, Kinds of Road and Distances to Market Town and Railway Station, by Provinces, 1931 301
Subsection 11. Miscellaneous Agricultural Statistics 302–303
46. Major Irrigation Projects in Southern Alberta, 1932 and 1933 302
47. Average Values per Acre of Occupied Farm Lands in Canada, as Estimated by Crop Correspondents, 1910 and 1917–34 303
Subsection 12. International Agricultural Statistics 303–310
48. Acreages and Yields of Cereals and Potatoes in Countries of the World, 1933 and 1934, with Five-Year Average for 1928–32 304–308
49. Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1933 and 1934 309
50. Numbers of Live Stock in Principal Countries, *circa* 1932 309–310

CHAPTER IX.—FORESTRY.

Section 1. *Physiography, Geology and Climate as Affecting the Forests* 311–313
Section 2. *Main Types of Forest Growth* 314–316
Section 3. *Important Tree Species* 316
Section 4. *Forest Resources* 317–319
1. Estimate of Total Accessible Stand of Timber in Canada, by Regions and Classes, with Estimate of Grand Total Stand, 1933 319
Section 5. *Forest Administration* 319–325
Subsection 1. Administration of Dominion and Provincial Timber Lands 319–321
Subsection 2. Forest Fire Protection 321–323
Subsection 3. Scientific Forestry 323–325
Section 6. *Forest Utilization* 325–342
Subsection 1. Woods operations 326–328
2. Values of Woods Operations, by Products, 1928–32 327
3. Quantities of Wood Cut in Woods Operations in Canada, Equivalents in Standing Timber and Total Values, by Chief Products, 1931 and 1932 327–328
4. Equivalent Volumes of Standing Timber Cut in Canada and Values of Products of Woods Operations, by Provinces, 1931 and 1932 328
Subsection 2. The Pulp and Paper Industry 328–337
5. Production, Consumption, Exports and Imports of Pulpwood, calendar years 1920–33 329
6. Pulp Production, Mechanical and Chemical, calendar years 1920–33 330
7. Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1928–33 332
8. Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1932 and 1933 332
9. Summary of Paper Production in Canada, calendar years 1917–33 334
10. Production of Paper in Canada, by Provinces, 1933 335
11. Estimated Quantities of Newsprint Produced in Leading Countries, 1932 and 1933, and the Five-Year Averages, 1929–33 335
12. Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1931, 1932 and 1933 336
Subsection 3. The Lumber Industry 337–339
13. Quantities and Values of Lumber, Lath, and Shingles Produced in Canada, calendar years 1920–33 338
14. Quantities and Values of Lumber and Values of Other and All Sawmill Products made in Canada, by Provinces, 1932 and 1933 338
15. Exports of Planks, Boards and Square Timber, by Importing Countries, calendar years 1931–34 339
Subsection 4. Summary of Primary Forest Production 340
Subsection 5. Other Forest Industries 340
Subsection 6. Manufactures of Wood and Paper 340–341
Subsection 7. Forest Depletion and Increment 341–342

CHAPTER X.—THE FUR TRADE.

PAGE.

1. Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1920–33 ... 346
2. Numbers and Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1932 and 1933 ... 346
3. Kinds, Numbers, Total Values and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1932 and 1933 ... 347

CHAPTER XI.—THE FISHERIES.

Section 1. *The Early Fisheries* ... 348
Section 2. *The Canadian Fishing Grounds* ... 348–350
Section 3. *The Government and the Fisheries* ... 350–354
1. Government Bounties Paid to Fishermen for the calendar years 1930–33 ... 353
Section 4. *The Modern Fishing Industry* ... 354–366
2. Total Values of Products of the Fisheries of Canada, 1870–1933 ... 355
3. Total Values of the Products of the Fisheries, by Provinces, calendar years 1928–33 ... 355
4. Quantities and Values of the Chief Commercial Fishes, calendar years 1929–33 ... 356
5. Yields of the Fisheries of Canada, Compared as to Quantity and Value, for 1931 and 1932 ... 357
5A. Yields of the Fisheries of Canada, Compared as to Quantity and Value, for 1932 and 1933 ... 358
6. Quantities and Values of Sea Fish and Products Marketed, calendar years 1932 and 1933 ... 359–360
7. Quantities and Values of Inland Fish Marketed, calendar years 1932 and 1933 ... 361
8. Numbers of Fish-Canning and -Curing Establishments, by Provinces, 1932 and 1933 ... 361
9. Values of Materials Used and of Products of Fish-Canning and -Curing Establishments, 1929–33 ... 362
10. Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1932 and 1933 ... 362–363
11. Numbers of Persons Employed in the Fisheries of Canada and in Processing Establishments Connected Therewith, 1931–33 ... 363
12. Employees and Salaries and Wages in Fish-Canning and -Curing Establishments, 1920–33 ... 364
13. Values of Exports and Imports of Fish and Fish Products, fiscal years 1902–34 ... 364
14. Exports of the Fisheries, the Produce of Canada, by Principal Countries, calendar years 1932 and 1933 ... 365
15. Exports of the Fisheries of Canada, by Quantities and Values, calendar years 1931–33 ... 365–366

CHAPTER XII.—MINES AND MINERALS.

Section 1. *Mineral Lands Administration and Mining Laws* ... 369–374
Subsection 1. Dominion Mining Laws and Regulations ... 369–370
Subsection 2. Provincial Mining Laws and Regulations ... 370–374
Section 2. *Summary of General Production* ... 374–388
Subsection 1. General Statistics of Mineral Production ... 375–381
1. Value of Mineral Production in Canada, calendar years 1886–1934 ... 375
2. Mineral Production of Canada, calendar years 1932 and 1933 ... 376–377
2A. Mineral Production of Canada, calendar year 1934 ... 378
3. Mineral Production of Canada, Compared as to Quantity and Value, calendar years 1932 and 1933 ... 380–381
Subsection 2. Provincial Distribution of Mineral Production ... 381–388
4. Mineral Production of Canada, by Provinces, calendar years 1911–34 ... 382
5. Mineral Production of Canada, by Provinces, calendar year 1932 ... 382–385
5A. Mineral Production of Canada, by Provinces, calendar year 1933 ... 385–388
Section 3. *Industrial Statistics of Mines and Minerals—Capital, Labour, Wages, etc., in Principal Industries* ... 388–394
6. Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1921–33, and by Provinces, 1932 and 1933 ... 391–392
7. Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1932 and 1933 ... 393–394
Section 4. *Production of Metallic Minerals* ... 395–412
Subsection 1. Gold ... 395–400
8. Quantities of Gold Produced in Canada, by Provinces, calendar years 1911–34 ... 397
9. Values of Gold Produced in Canada, by Provinces, calendar years 1911–34 ... 398
10. Quantities and Values of World Production of Gold, 1891–1933 ... 399
11. Quantities and Values of the World Production of Gold and Silver, by Countries, calendar years 1932 and 1933 ... 399–400
Subsection 2. Silver ... 401–404
12. Quantities and Values of Silver Produced in Canada during the calendar years 1911–34 ... 402
13. Quantities and Values of Silver Produced in Canada, by Provinces, during the calendar years 1911–34 ... 402
14. Quantities and Values of World Production of Silver, with Annual Average Prices, 1860–1933 ... 403

CHAPTER XII.—MINES AND MINERALS—concluded.

PAGE.

Subsection 3. Copper ... 404–406
15. Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911–34 ... 406
16. Copper Production of the Leading Countries and of the World, 1913–33 ... 406
Subsection 4. Lead ... 407–408
17. Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911–34 ... 408
Subsection 5. Nickel ... 408–409
18. Quantities and Values of Nickel Produced in Canada during the calendar years 1911–34 ... 409
Subsection 6. Cobalt ... 409
Subsection 7. Zinc ... 410
19. Production of Zinc in Canada, calendar years 1911–34 ... 410
Subsection 8. Iron ... 411–412
20. Iron Ore Shipments and Production of Pig Iron and of Steel Ingots and Castings, calendar years 1909–34 ... 412
Section 5. *Production of Non-Metallic Minerals* ... 412–420
Subsection 1. Fuels ... 412–418
21. Coal Resources of Canada, by Provinces and Classes of Coal ... 413
22. Production of Coal in Canada, by Provinces, calendar years 1911–34 ... 414
23. Imports into Canada of Anthracite, Bituminous and Lignite Coal for Home Consumption, calendar years 1911–33 ... 414
24. Exports of Coal, the Produce of Canada, calendar years 1911–33 ... 415
25. Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911–33 (short tons) ... 415
26. Coal Output, Exports, Receipts from Other Countries and Coal Made Available for Consumption in Canada during 1932 and 1933 ... 416
27. Coal Produced in the Principal Countries of the World, 1913, 1921–33 ... 416–417
28. Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920–34 ... 417
29. Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911–34 ... 418
Subsection 2. Other Non-Metallic Minerals ... 418–420
30. Quantities and Values of Asbestos Produced in Canada, calendar years 1911–34 ... 419
Section 6. *Production of Clay Products and Other Structural Materials* ... 420–422
31. Production, Imports, Exports and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910–34 ... 421
32. Production of Sand, Gravel and Stone in Canada, Showing the Principal Purposes, calendar years 1931–33 ... 422

CHAPTER XIII.—WATER POWERS.

Section 1. *The Water Powers of Canada* ... 423–427
1. Available and Developed Water Power in Canada, by Provinces, Jan. 1, 1935 ... 425
2. Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900–34 ... 426
3. Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Jan. 1, 1935 ... 427
Section 2. *Central Electric Stations* ... 427–430
4. Summary Statistics of Central Electric Stations, calendar years 1917–33 ... 428
5. Main Plant Equipment of Central Electric Stations, by Provinces and Total Auxiliary Equipment, 1933 ... 429
6. Electrical Energy Generated in Central Electric Stations, by Provinces, calendar years 1928–33 ... 430
7. Electrical Energy Generated or Produced for Export under Authority of the Electricity and Fluid Exportation Act, fiscal years ended Mar. 31, 1931–34 ... 430
Section 3. *Public Ownership of Hydro-Electric Power* ... 431–440
Subsection 1. The Hydro-Electric Power Commission of Ontario ... 431–437
8. Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, 1910–33 ... 432
9. Distribution of Power to Systems of the Ontario Hydro-Electric Power Commission, 1929–33 ... 433
10. Capital Investments in Ontario's Hydro Undertakings, 1929–33 ... 433
11. Accumulated Reserves of the Ontario Hydro-Electric Power Commission and of the Local Electric Utilities of the Co-operating Municipalities, 1929–33 ... 434
12. Consolidated Statement of Assets, Liabilities, Reserves and Surpluses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1929–33 ... 435
13. Statement of Earnings and Expenses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1929–33 ... 436
14. Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1929–33 ... 437
Subsection 2. Hydro-Electric and Power Commissions in Other Provinces ... 437–440

CHAPTER XIV.—MANUFACTURES.

Section 1. *The Evolution of Canadian Manufacturing Industries* ... 441–454
Subsection 1. Growth of Manufacturing in Canada since 1870 ... 442–448
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870–1933 ... 443

CHAPTER XIV.—MANUFACTURES—continued.

PAGE.

2. Summary of Statistics of Manufactures, by Provinces, for Representative Years, 1917–33 ... 444–445
3. Summary of Statistics of Manufactures, by Industrial Groups, for Representative Years, 1917–33 ... 445–448

Subsection 2. Summary Statistics of Manufacturing Production ... 448–454

4. Summary Statistics of Manufactures for Representative Years, 1917–33 ... 449
5. Indexes of the Volume of Manufacturing Production, According to Component Material and Purposes Classifications, 1924–32 ... 453
6. Consumption of Manufactured Products, by Groups, 1932, with Totals for 1922–32 ... 454

Section 2. *Production of Industrial Groups and Individual Industries* ... 455–478

Subsection 1. Manufactures Grouped by Chief Component Materials ... 455–467

7. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials and Values of Products of Canadian Manufacturing Industries, 1932 ... 462–467

Subsection 2. Manufactures Classified by the Purpose of the Products ... 468–470

8. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922–32, and in Detail for 1932 ... 468–470

Subsection 3. Manufactures Classified by Origin of the Materials ... 471–474

9. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924–32 ... 472–474

Subsection 4. The Forty Leading Manufacturing Industries ... 474–478

10. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1932 ... 475
10A. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1933 ... 476
11. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Net Value of the Products, 1932 ... 477
12. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Salaries and Wages Paid, 1932 ... 478

Section 3. *Provincial Distribution of Manufacturing Production* ... 479–486

Subsection 1. The Manufactures of the Maritime Provinces, 1932 ... 479–480

13. Statistics of the Leading Industries of each of the Maritime Provinces, 1932 ... 479–480

Subsection 2. The Manufactures of Quebec, 1932 ... 480–481

14. Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1932 ... 481

Subsection 3. The Manufactures of Ontario, 1932 ... 482–483

15. Principal Statistics of the Forty Leading Industries of the Province of Ontario, 1932 ... 483

Subsection 4. The Manufactures of the Prairie Provinces, 1932 ... 483–485

16. Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1932 ... 484–485

Subsection 5. The Manufactures of British Columbia, 1932 ... 485–486

17. Principal Statistics of the Leading Industries of British Columbia and the Yukon Territory, 1932 ... 486

ection 4. *Principal Factors in Manufacturing Production* ... 486–506

Subsection 1. Capital Employed ... 486–488

18. Percentage Distribution of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1917–32 ... 487
19. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and by Groups of Industries, 1932, and Totals for Representative Years, 1923–32 ... 488

Subsection 2. Employment in Manufactures ... 488–494

20. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917–32 ... 490
21. Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1932 ... 491
22. Total Number of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months, 1922–1932 and by Sex, 1922 and 1932 ... 492
23. Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1932, by Provinces and Groups ... 493
24. Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1932, in each of the Forty Leading Industries ... 494

Subsection 3. Wages and Salaries in Canadian Manufacturing Industries, 1932 ... 495–499

25. Employees on Salaries and Wages in Manufacturing Industries, 1932, and Average Salaries and Wages, by Provinces and Groups, 1931 and 1932 ... 496
26. Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1932, together with Comparative Figures of Average Salaries and Wages Paid in 1931, and Totals and Averages Paid in Previous Representative Years ... 497
27. Average Yearly Earnings and Index Numbers of Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917–32 ... 498
28. Percentages of Wages and Salaries Paid to Total Net Values of Manufacturing Production, 1917–32 ... 499

Subsection 4. Sizes of Manufacturing Establishments ... 499–502

29. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922 and 1932 ... 500
30. Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1932 ... 501
31. Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923 and 1932 ... 502

CHAPTER XIV.—MANUFACTURES—concluded.

PAGE.

32. Establishments and Employees in Canadian Manufactures, by Provinces, Grouped According to the Number of Employees per Establishment, 1932 502
Subsection 5. Power and Fuel 503–506
33. Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921–32, with Details by Provinces and Groups of Industries for 1932 504–505
34. Total Values of Fuels Used in the Manufacturing Industries of Canada, 1921–32, with Details by Provinces and Groups, 1932 506
Section 5. *Manufacturing Industries in Cities and Towns* 507–510
35. Cities and Towns with a Gross Manufacturing Production of over $1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1932 507
36. Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1929–33 508
37. Statistics of Manufactures of Municipalities with a Gross Production of $1,000,000 or over each, and with Three or more Establishments, 1932 508–510

CHAPTER XV.—CONSTRUCTION.

1. Summary of the Value of Construction Contracts Awarded in Canada, 1911-34, as Compiled by MacLean Building Reports, Ltd 512
2. Construction Contracts Awarded in Canada, 1929–34, by Provinces and Types of Construction, as Compiled by MacLean Building Reports, Ltd 513
3. Values of Building Permits Taken Out in 61 Cities for the calendar years 1929–34 514–515
4. Values of Building Permits Issued by 35 Cities in the calendar years 1910–34 and Index Numbers of the Construction Industries 516

CHAPTER XVI.—EXTERNAL TRADE.

Section 1. *The Development of Tariffs* 517–526
Subsection 1. Historical Sketch of External Trade and Tariffs 517–519
Subsection 2. Preferential Tariff and Trade Treaties 520–526
Section 2. *The Commercial Intelligence Service* 526–528
Canadian Tariff Arrangements with Foreign Countries 524–526
Canadian Government Trade Commissioners 527–528
Section 3. *Statistics of External Trade* 529–635
Subsection 1. Historical Statistics of Canadian Trade 530–531
Subsection 2. General Analysis of Current Import and Export Trade 531–533
I. Summary of Canada's Trade with the World 532
Subsection 3. Trade with the United Kingdom and the British Empire 533–535
II. Summary of Canada's Trade with the United Kingdom 534
III. Canada's Trade with the British Empire 535
Subsection 4. Trade with the United States and Other Foreign Countries 536–538
IV. Summary of Canada's Trade with the United States 537
V. Canada's Trade with the United States and Other Foreign Countries 538
Subsection 5. Geographical Distribution of Canadian Trade by Continents and Countries 539–541
VI. Canada's Trade by Continents, Fiscal Years 1929 to 1934 539
VII. Canada's Imports from Thirty-Five Leading Countries, 1934 540
VIII. Canada's Domestic Exports to Forty Leading Countries, 1934 541
Subsection 6. Principal Commodities Imported and Exported 542–545
IX. Canada's Leading Imports, fiscal years 1890, 1900, 1910, 1920, 1930, 1934 542–543
X. Canada's Leading Domestic Exports, fiscal years 1890, 1900, 1910, 1920, 1930, 1934 544–545
Subsection 7. Proportions of Trade in Raw and Manufactured Products 545–547
XI. Canada's Imports and Exports, by Continents and Leading Countries, According to Degree of Manufacture, year ended Mar. 31, 1934 546–547
Subsection 8. Canada's Position in International Trade in 1933 547–552
XII. Trade of Twelve Leading Commercial Countries Expressed in Canadian Currency, calendar year 1933 548
XIII. Comparison of the Trade of Twenty Principal Countries of the World, calendar years 1913 and 1933 549
XIV. Trade of Twenty Principal Trading Countries of the World, Expressed in Canadian Currency, calendar years 1923–33 550
XV. Per Capita Trade of Twenty Principal Trading Countries of the World, calendar years 1923–33 551
XVI. Trade Balances of Twenty Principal Countries of the World, calendar years 1913, 1932 and 1933 552
Subsection 9. Main Historical Tables and Tables showing Current Trends in External Trade 552–631
1. Aggregate External Trade of Canada, fiscal years 1868–1934 554
2. Ratio of Exports to Imports and Value per Capita of Exports, Imports and Total Trade, fiscal years 1868–1934 555
3. Movement of Coin and Bullion, fiscal years 1868–1934 556
4. Duties Collected on Exports, 1868–92, and on Imports for Home Consumption, 1868–1934, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868–1934 557
5. Exports to the United Kingdom, to the United States and to Other Countries, of Merchandise the Produce of Canada, fiscal years 1868–1934 558
6. Imports from the United Kingdom, from the United States and from Other Countries, of Merchandise Entered for Home Consumption, fiscal years 1868–1934 559

CHAPTER XVI.—EXTERNAL TRADE—concluded.

PAGE.

7. Percentage Proportions of Imports from the United Kingdom and the United States, respectively, to Totals of Dutiable and Free in the fiscal years 1911-34 560
8. Average *ad valorem* Rates of Duty Collected on Dutiable and Total Imports from United Kingdom, the United States and All Countries, fiscal years 1868-1934 560
9. Imports for Home Consumption of Certain Raw Materials Used in Canadian Manufactures, fiscal years 1911-34 561
10. Exports to the United Kingdom, to the United States and to All Countries, of Classes of Merchandise the Produce of Canada by Values and Percentages, fiscal years 1931-34 562
11. Imports from the United Kingdom, from the United States and from All Countries, of Classes of Merchandise Entered for Home Consumption, by Values and Percentages, fiscal years 1931-34 563
12. Principal Exports of Canadian Produce from Canada to United Kingdom, United States and All Countries, fiscal years 1931-34 564-583
13. Principal Imports into Canada for Consumption from United Kingdom, United States and All Countries, fiscal years 1931-34 584-615
14. Imports (Dutiable and Free) and Exports of Canadian and Foreign Produce, by Main Classes, and Totals of Duties Collected during the fiscal years ended Mar. 31, 1930-34 616-617
15. External Trade of Canada, by Main Groups and Degree of Manufacture, According to Origin, fiscal year ended Mar. 31, 1934 618-619
16. Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1934 620-624
17. Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at certain Ports and by Provinces, fiscal years ended Mar 31, 1933 and 1934 625-626
18. Imports of Canada, by Values Entered for Consumption from British Empire and Foreign Countries, Dutiable and Free, under the General, Preferential and Treaty Rate Tariffs, fiscal year ended Mar. 31, 1934 627
19. Values of Imports into Canada of Merchandise Entered for Consumption, from the British Empire and from Foreign Countries, fiscal years ended Mar. 31, 1930-34 627-629
20. Values of Exports of Canadian Produce, from Canada to the British Empire and to Foreign Countries, fiscal years ended Mar. 31, 1930-34 629-630
21. Values and Percentages of Canadian Imports and Exports from and to Stated Countries, passing through the United States, fiscal years ended Mar. 31, 1933 and 1934 631

Subsection 10. Comparison of the Volume of Imports and Exports 632-635

22. Comparison of the Values and Volumes of the External Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1926 and 1929-34 633-635

Section 4. *The Tourist Trade of Canada* 635-637

23. Tourist Expenditures in Canada and of Canadians Abroad, 1924-33 636

Section 5. *Balance of International Payments 1920-33* 637-639

24. Estimated Balance of International Payments, 1933 and 1934 639

CHAPTER XVII.—INTERNAL TRADE.

Section 1. *Interprovincial Trade* 640-641

1. Railway Revenue Freight Traffic Movement in Canada and the Provinces, calendar years 1932 and 1933 641

Section 2. *Grain Trade Statistics* 642-652

2. Summary of the Distribution of Canadian Grain, crop year ended July 31, 1933 642-643
2A. Summary of the Distribution of Canadian Grain, crop year ended July 31, 1934 646-647
3. Numbers and Storage Capacities of Canadian Grain Elevators, licence years 1933 and 1934 647-648
4. Quantities of Canadian Grain Inspected during the crop years ended July 31, 1931-34 648-649
5. Shipments of Grain by Vessels from Fort William and Port Arthur for the navigation seasons 1933 and 1934 649
6. Shipments of Grain by Lake and All-Rail Routes from Fort William and Port Arthur for the crop years ended July 31, 1933 and 1934 649
7. Canadian Grain Handled at Eastern Elevators, by crop years ended July 31, 1930-34 650
8. Canadian Grain Handled at Eastern Elevators, by Classes of Ports, during the crop year ended July 31, 1933 650
9. Approximate Average Handling and Freight (c.i.f.) Charges Between the Producer in Western Canada and British Ports, per Bushel of Wheat Exported *via* Montreal-Sorel-Quebec, calendar year 1934 651
10. Approximate Average Handling and Freight (c.i.f.) Charges Between the Producer in Western Canada and British Ports, per Bushel of Wheat Exported *via* Vancouver-New Westminster, calendar year 1934 651
11. Flour Mills of Canada, with Their Equipment and Capacities, 1932 and 1933 652

Section 3. *Marketing of Live Stock and Animal Products* 652-660

12. Animals in Canada and Animals Killed or Sold by Farmers in Canada, by census years, 1871-1931 653
13. Index Numbers of Animals on Farms in Canada, calendar years 1921-34 653
14. Total Receipts of Live Stock and Disposition of Slaughter and Store Stock at Principal Markets in Canada, calendar years 1932 and 1933 654

CHAPTER XVII.—INTERNAL TRADE—concluded.

PAGE.

15. Live Stock from Several Provinces of Canada, Marketed through Stockyards, Packers, etc., calendar year 1933 655
16. Grading of the Live Stock from Several Provinces of Canada, Marketed at the Stockyards, calendar year 1933 655-656
17. Principal Statistics of the Slaughtering and Meat-Packing Industry of Canada, decennially 1871-1921, annually 1928-33 657
18. Live Stock Slaughtered at Canadian Inspected Establishments, by months, 1932 and 1933 657
19. Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, calendar years 1929-33 658-659
20. Provincial Shipments of Meat Products, with Total Interprovincial and Export Shipments, calendar year 1932 659

Section 4. *Cold Storage* 660-661
21. Cold Storage Warehouses in Canada, by Provinces, 1933 and 1934 660
22. Stocks of Food on Hand in Cold Storage and in Process of Cure, by Months and Commodities, 1933 and 1934 661

Section 5. *Bounties* 662-663

Section 6. *Patents, Copyrights and Trade Marks* 663-665
23. Number of Canadian Patentees, by Province of Residence, for the fiscal years ended Mar. 31, 1923-34 664
24. Statistics of Patents Applied for, Granted, etc., fiscal years ended Mar. 31, 1929-34 664
25. Statistics of Copyrights, Trade Marks, etc., fiscal years ended Mar. 31, 1929-34 665
26. Receipts, Expenditures and Surplus on Account of Patents, Copyrights and Trade Marks, fiscal years ended Mar. 31, 1929-34 665

Section 7. *Weights and Measures* 666-667
27. Inspections by the Weights and Measures Service, fiscal years ended Mar. 31, 1933 and 1934 667

Section 8. *Electricity and Gas Inspection* 667-668
28. Numbers of Electricity Meters in Use, fiscal years ended Mar. 31, 1915-34 668
29. Numbers of Gas Meters in Use, by Kinds of Gas Consumed, fiscal years ended Mar. 31, 1916-34 668
30. Numbers of Cubic Feet of each Kind of Gas Sold in Canada, fiscal years ended Mar. 31, 1920-34 668

Section 9. *Census of Merchandising and Service Establishments* 669-690
31. Retail Merchandise Trade—Total Sales and Indexes of Sales by Groups and Provinces, 1930-33 670

Subsection 1. Wholesale and Other Bulk or Non-Retail Merchandising 670-672
32. Bulk Merchandising (Wholesale and Other Non-Retail) in Canada, by Provinces, 1930 671
33. Bulk Merchandising (Wholesale and Other Non-Retail) in Canada, by Type of Distributor, 1930 672

Subsection 2. Retail Trade 673-690
34. Value of the Known Retail Trade in Canada, by Provinces, 1930 674-675
35. Summary Statistics of Retail Merchandising and Service Establishments in Canada, by Provinces and Business Groups, 1930 674-677
36. Retail Merchandise Trade in Canada, by Provinces, 1930 676
37. Total Retail Merchandising Establishments Grouped According to Annual Net Sales, with Numbers and Proportions of Full-Time Employees, Stores and Sales in Each Class, and Average Number of Employees per Store, 1930 677
38. Retail Merchandise Trade in Canada, by Group and Kind of Business, 1930 678-681
39. Types of Operation of Stores Engaged in Retail Merchandising in Canada, 1930 682-683
40. Retail Merchandise Trade in Cities of 10,000 Population and Over, 1930 684-685
41. Estimated Retail Sales and Percentages of Total, by Commodities, 1930 685
42. Employment and Wage Facts, Retail Merchandising Establishments in Canada, by Business Groups and Provinces, 1930 686
43. Retail Services in Canada, by Provinces, 1930 687
44. Employment and Wage Facts, Retail Service Establishments in Canada, 1930 687
45. Retail Services in Canada, by Group and Kind of Business and Type of Operation, 1930 688-690

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Part I.—Government Control Over Agencies of Transportation and Communication 692-694
The Board of Railway Commissioners for Canada 693-694

Part II.—Steam Railways 694-725

Section 1. *Historical Sketch* 694-698

Section 2. *Statistics of Steam Railways* 698-714
1. Record of Steam Railway Mileage as at June 30, 1835-1919, and Dec. 31, 1919-33 699
2. Operated Steam Railway Mileage, by Provinces, Dec. 31, 1925-33 699
3. Capital Liability of Steam Railways as at June 30, 1901-19, and Dec. 31, 1919-33 700
4. Mileage, Capital Liability, Earnings and Operating Expenses of Individual Steam Railways for the calendar year 1932 700-701
4A. Mileage, Capital Liability, Earnings and Operating Expenses of Individual Steam Railways for the calendar year 1933 701-702
5. Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1928-33 703
6. Summary of Steam Railway Statistics of Freight and Passenger Traffic, and Ratio of Expenses to Earnings, years ended June 30, 1911-19, and calendar years 1919-33 704

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

PAGE.

7. Distribution of Operating Expenses of Steam Railways, calendar years 1930–33 704
8. Earnings and Operating Expenses of Steam Railways per Mile of Line and per Train Mile, for the years ended June 30, 1915–19, and the calendar years 1919–33 705
9. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the years ended June 30, 1915–19, and the calendar years 1919–33 706–707
10. Numbers of Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratios of the Latter to Gross Earnings and Operating Expenses, for years ended June 30, 1912–19, and for calendar years 1919–33 708
11. Rolling Stock of Steam Railways, calendar years 1927–33 709
12. Commodities Hauled as Freight on Steam Railways during the calendar years 1929–33 709–710
13. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments up to Dec. 31, 1933 711–712
14. Analysis of the Total Financial Aid Given to Steam Railways up to Dec. 31, 1933 712
15. Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1933 713
16. Numbers of Passengers, Employees and Others Killed and Injured on Steam Railways, calendar years 1920–33 713
17. Numbers of Persons Killed and Injured on Steam Railways in the calendar years 1931–33 714

Section 3. *Origin and Growth of Government-Owned Railways* 714–725

18. Government Investments in Railways to Mar. 31, 1934 715–716
19. Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, for the calendar years 1932 and 1933 717–718
20. Gross Revenues, Operating Expenses, Net Revenues, Interest on Funded Debt and Deficits of the Canadian National Railways, calendar years 1923–33 719
21. Long-Term Debt of Canadian National Railways (Including Appropriations for Canadian Government Railways), Showing Principal Outstanding at ends of calendar years 1922–33, and New Funds Raised, calendar years 1923–33 721
22. Capital Received by Canadian National Railways, calendar years 1923–33 722
22A. Capital Expended by Canadian National Railways, calendar years 1923–33 723
23. Adjustments Accounting for Difference in Railway Obligations as shown by Public Accounts, Mar. 31, 1934, and by Canadian National Railways Balance Sheet, Dec. 31, 1933 724
24. Assets of the Canadian National Railways System, Dec. 31, 1922 and 1933 724–725

Part III.—Electric Railways 725–730

25. Summary of Statistics of Electric Railway Operation, years ended June 30, 1911-19, and calendar years 1919–33 727
26. Mileage and Equipment of Electric Railways in the calendar years 1930–33 727
27. Capital Liability of Electric Railways, years ended June 30, 1908–19, and calendar years 1919–33 728
28. Mileage, Capital, Earnings, Operating Expenses, Passengers, Employees, and Salaries and Wages of Electric Railways in Canada, calendar year 1932 728–729
28A. Mileage, Capital, Earnings, Operating Expenses, Passengers, Employees, and Salaries and Wages of Electric Railways in Canada, calendar year 1933 729–730
29. Numbers of Passengers, Employees and Others Killed and Injured on Electric Railways, calendar years 1919–33, with Totals from 1894 to June 30, 1919 730

Part IV.—Express Companies 731–732

30. Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1919–33 732
31. Revenues, Expenses and Operating Mileage of Express Companies, by Companies, calendar years 1932 and 1933 732
32. Business Transacted by Express Companies in Financial Paper, calendar years 1929–33 732

Part V.—Roads and Highways 733–736

33. Classification of Canadian Highways, by Provinces, Dec. 31, 1933 734
34. Capital and Maintenance Expenditures on Provincial Highways or Provincially Subsidized Highways in Canada, calendar years 1929–33 735
35. Provincial Government Funded Highway Debt and Annual Charges thereon, Dec. 31, 1932 and 1933 736

Part VI.—Motor Vehicles 736–744

Section 1. *Statistics of Motor Vehicle Operation* 737–740

36. Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1907–33 738
37. Types of Motor Vehicles Registered in Canada, by Provinces, calendar years 1932 and 1933 738
38. Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, for the years 1932 and 1933 739
39. Apparent Consumption of Automobiles in Canada, 1917–33 740

Section 2. *Motor Vehicle Acts and Regulations* 740–744

Part VII.—Air Navigation 744–746

40. Statistical Summary of Civil Aviation in Canada, 1929–34 745–746

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

PAGE.

Part VIII.—Canals 746–755
Section 1. *Canal Systems* 746–748
41. Canals of Canada, Length and Lock Dimensions, 1935 747
42. Expenditures and Revenues of Canals for Period before Confederation, 1868–1910, and fiscal years ended Mar. 31, 1911–34 748
43. Capital Expenditures for Construction and Enlargement of Canals to Mar. 31, 1934 748
Section 2. *Canal Traffic* 749–755
44. Total Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1911–34 749
45. Distribution of Total Freight Traffic on Canals, by Months, navigation seasons 1927–34 750
46. Tonnage of Canal Traffic, by Canals and Classes of Products, navigation seasons 1933 and 1934 750
47. Principal Commodities Carried through Canadian Canals, navigation seasons 1931–34 751
48. Canal Traffic, by Direction and Origin, navigation seasons 1933 and 1934 752
49. Traffic through individual Canadian Canals, navigation seasons 1930–34 753
50. Traffic to and from the East and West Coasts of Canada *via* the Panama Canal, years ended June 30, 1921–34 754
51. Summary of Commercial Traffic through the Panama Canal, years ended June 30, 1915–34 755

Part IX.—Shipping and Navigation 755–777
52. Sea-Going and Inland Vessels (Exclusive of Coasting Vessels and Ferriage) Arrived at and Departed from Canadian Ports, fiscal years ended Mar. 31, 1911–34 757
Section 1. *Ocean Shipping* 757–761
53. Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended Mar. 31, 1911–34 758
54. Details, by Nationality, of Sea-Going Vessels (Exclusive of Coasting Vessels) Entered and Cleared at Canadian Ports, fiscal years ended Mar. 31, 1933 and 1934 759
55. Sea-Going Vessels Entered and Cleared, by Principal Countries, fiscal year ended Mar. 31, 1933 760
55A. Sea-Going Vessels Entered and Cleared, by Principal Countries, fiscal year ended Mar. 31, 1934 761
Section 2. *Inland Shipping* 762–763
56. Canadian and United States Shipping on Rivers and Lakes between Canadian and United States Ports, Exclusive of Ferriage, fiscal years ended Mar. 31, 1930–34 763
Section 3. *Coasting Trade* 763–764
57. British and Foreign Vessels Employed in the Coasting Trade of Canada, fiscal years ended Mar. 31, 1930–34 754
Section 4. *Grand Total Shipping Trade* 764–769
58. Totals of Numbers and Tonnages of all Vessels Entered and Cleared at Canadian Ports, Exclusive of Ferriage, 1923–34, With Details by Provinces for the fiscal years ended Mar. 31, 1933 and 1934 765–766
59. Numbers and Tonnages of Sea-Going and of All Vessels Entered and Cleared at the Principal Ports of Canada, fiscal year ended Mar. 31, 1933 767–768
59A. Number and Tonnage of Sea-Going and of All Vessels Entered and Cleared at the Principal Ports of Canada, fiscal year ended Mar. 31, 1934 .....
Section 5. *Shipping Constructed and on the Registry* 769–771
60. Vessels Built and Registered in Canada and Vessels Sold to Other Countries, fiscal years ended Mar. 31, 1911–34 770
61. Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, Dec. 31, 1924–33 770–771
Section 6. *The Department of Marine* 771–776
62. Total Revenues and Expenditures of the Department of Marine, fiscal years ended June 30, 1901–06, and Mar. 31, 1907–34 771
63. Revenues of the Department of Marine, by Sources, fiscal years ended Mar. 31, 1929–34 772
64. Expenditures of the Department of Marine, fiscal years ended Mar. 31, 1929–34 772–773
65. Steamboat Inspection, fiscal years ended Mar. 31, 1933 and 1934 773–774
66. Number of Seamen Shipped and Discharged at Canadian Ports, calendar years 1908–33 775
67. Canadian Wrecks and Casualties, years ended June 30, 1911–17, and calendar years 1918–33 775
68. Comparative Statement of Marine Danger Signals, fiscal years ended Mar. 31, 1923–34 776
Section 7. *Merchant Marine Services Operated by the Canadian Government* 776–777

Part X.—Telegraphs 778–780
69. Summary Statistics of All Canadian Telegraphs, calendar years 1920–33 779
70. Statistics of Chartered Telegraph Companies for the calendar years 1929–33 780

Part XI.—Telephones 781–784
71. Summary Financial Statistics of Telephones in Canada, years ended June 30, 1911–18, and Dec. 31, 1919–33 782
72. Number of Telephone Companies in Canada, Classified by Form of Control, 1911–33 782
73. Number of Telephone Companies in Canada, by Provinces and Form of Control, Dec. 31,1933 783

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—concluded.

PAGE.

74. Telephones in Use Classified by Business, Residential, Rural and Public Pay, Mileages of Wire and Pole Line, and Numbers of Employees, 1911–33 783
75. Telephones in Use, Mileage of Wire and Number of Employees, by Provinces, Dec. 31, 1933 784

Part XII.—Radio 784–789
Section 1. *Radiotelegraphy* 784–786
76. Government-Owned Radio Stations in Canada, fiscal year ended Mar. 31, 1934.. 785–786
77. Business and Cost of Maintenance of Radiotelegraph Stations for the fiscal years ended Mar. 31, 1933 and 1934 786
Section 2. *Radiotelephony* 787
78. Wireless and Radio Stations in Operation in Canada, Mar. 31, 1930–34 787
Section 3. *The Canadian Radio Broadcasting Commission* 788–789

Part XIII.—The Post Office 789–798
79. Numbers of Post Offices in Operation, by Provinces, Mar. 31, 1929–34 791
80. Statistics of Gross Postal Revenues of Offices Collecting $10,000 and upwards, fiscal years ended Mar. 31, 1933–34 792–793
81. Revenues and Expenditures of the Post Office Department for the quinquennial fiscal years ended 1890–1910, and fiscal years ended Mar. 31, 1911–34 794
82. Operations of the Money Order System in Canada, fiscal years ended Mar. 31, 1911–34 795
83. Money Order Statistics, by Provinces, and Total Postal Notes, fiscal years ended Mar. 31, 1930–34 795–796
84. Mileage Flown and Weight of Mails Carried by Air, fiscal year ended Mar. 31, 1934 797
85. Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1932–34 798

CHAPTER XIX.—LABOUR AND WAGES.

Part I.—Labour 799–852
Section 1. *Occupations of the People* 799–803
1. Persons, Ten Years of Age and Over, Engaged in Gainful Occupations in Canada, by Sex and Occupation, 1931 800–801
2. Persons, Ten Years of Age and Over, Engaged in Gainful Occupations in Canada, by Sex and Industry, 1931 802–803
Section 2. *The Dominion Department of Labour* 803–806
Section 3. *Provincial Labour Departments and Bureaus* 806–809
Section 4. *Canada and the International Labour Organization* 809–810
Section 5. *Organized Labour in Canada* 810–815
3. Membership of Trade Unions in Canada, 1911–33 813
4. International Trade Unions Operating in Canada, showing Numbers of Branches and Members, December, 1933 814–815
5. Canadian Central Labour Bodies Operating in Canada, showing Numbers of Branches and Members, December, 1933 815
Section 6. *Fatal Industrial Accidents* 816
6. Fatal Industrial Accidents in Canada, by Industries, 1930–34 816
Section 7. *Workmen's Compensation in Canada* 817–821
7. Compensation Paid and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1917–34 817
8. Compensation Paid by the New Brunswick Workmen's Compensation Board, 1920–33 818
9. Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928–33 818
10. Benefits Awarded and Accidents Reported by the Ontario Workmen's Compensation Board, 1915–34 819
11. Compensation Paid and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1917–33 820
12. Compensation Paid and Accidents Compensated by the Saskatchewan Workmen's Compensation Board, 1930–33 820
13. Compensation Paid and Accidents Compensated by the Alberta Workmen's Compensation Board, 1921–33 821
14. Compensation Paid and Accidents Compensated by the British Columbia Workmen's Compensation Board, 1917–33 821
Section 8. *Strikes and Lockouts* 822–824
15. Strikes and Lockouts in Canada, calendar years 1911–34 822–823
16. Strikes and Lockouts, showing Number of Workers Involved and Time Loss, by Provinces, calendar years 1933 and 1934 823
17. Strikes and Lockouts, by Industries, 1933 and 1934 824
Section 9. *Employment and Unemployment* 825–836
Subsection 1. Operations of the Employment Service of Canada 825–826
18. Applications for Employment, Positions Offered and Placements Effected by the Employment Service of Canada, 1920–34, and by Provinces, 1933 and 1934 826
Subsection 2. Unemployment as Reported by Trade Unions 827–828
19. Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1915–32, and by months, 1933 and 1934 827–828
Subsection 3. Employment as Reported by Employers 828–832
20. Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1933, to December, 1934, with Yearly Averages since 1921 830

CHAPTER XIX.—LABOUR AND WAGES—concluded.

PAGE.

21. Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1933, to December, 1934, with Yearly Averages since 1922 831
22. Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of each Month, January, 1933, to December, 1934, with Yearly Averages since 1921 832

Subsection 4. Unemployment Relief 833–835
23. Recapitulation of Dominion Disbursements under Relief Legislation as at Jan. 31, 1935 835

Subsection 5. Employment and Unemployment Statistics of the Census 835–836
24. Wage-Earners, 10 Years of Age and Over, and Numbers Not at Work on June 1, 1931, According to Industrial Group and Sex, and Percentages of Total Wage-Earners Not at Work in Each Group 836
25. Wage-Earners, 10 Years of Age and Over, Numbers and Percentages Losing Time, and Total and Average Weeks Lost during the Period June 1, 1930, to June 1, 1931, According to Industrial Group and Sex 836

Section 10. *Old Age Pensions* 837–838
26. Financial Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1934 838

Section 11. *The Co-operative Movement in Canada* 839–841

Subsection 1. Consumers' Co-operation 839–840
27. Statistics of Co-operative Societies, Affiliated with the Co-operative Union of Canada, 1909–33 839

Subsection 2. Co-operative Credit in Quebec 840
28. Progress of Co-operative People's Banks in Quebec, 1915–33 840

Subsection 3. Agricultural Co-operation in Canada in 1933 841–843
29. Farmers' Co-operative Business Organizations in Canada, 1933 843

Section 12. *Labour Legislation in Canada in* 1933 *and* 1934 844–849

Section 13. *Legislation Respecting Combinations in Restraint of Trade* 849–850

Section 14. *Mothers' Allowances* 840–852

Part II.—Wages and Cost of Living 852–859

Section 1. *Wage Rates* 852–854
1. Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913–34 853
2. Rates of Wages and Hours of Labour in Various Trades, and of Unskilled Factory Labour in Certain Cities of Canada, 1934 854

Section 2. *Wages and Hours of Labour Under Provincial Minimum Wage Legislation* 854–858

Subsection 1. Minimum Wages for Females 855–857
3. Minimum Wage Rates for Female Employees in Canada Under Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1934 856–857

Subsection 2. Minimum Wages for Male Employees 858

Section 3. *Cost of Living of Wage-Earners* 859
4. Changes in the Cost of Living in Canada from 1914 to 1934 859

Section 4. *Earnings in the Census Year*, 1931 859

CHAPTER XX.—PRICES.

Section 1. *Wholesale Prices of Commodities* 860–869

Subsection 1. Historical Review of Canadian Prices 860–861
1. Annual Index Numbers of Wholesale Prices in Canada, 1867–1934 861

Subsection 2. The Index Number on a Post-War Base (1926) 862–869
2. Weighted General Wholesale Price Index Numbers, by Months, 1925–34 862
3. Annual Weighted Index Numbers of Wholesale Prices of Commodities, by Groups (Chief Component Material Classification), 1913–34, with Monthly Figures for 1932–34 863–864
4. Index Numbers of Wholesale Prices of Commodities, Classified According to Purpose, by Yearly Averages, 1914–34, and by Months, 1932–34 864–865
5. Weighted Index Numbers of Wholesale Prices of Commodities, Classified According to Origin and Degree of Manufacture, by Yearly Averages, 1918–34 866
6. Weighted Index Numbers of Wholesale Prices of Commodities, Classified According to Origin and Degree of Manufacture, by Months, 1930–34 867–869

Section 2. *Retail Prices of Commodities* 869–873
7. Index Numbers of Retail Prices of Commodities, 1913–34 870
8. Index Numbers of Retail Prices, Rents and Costs of Services, by Months, 1932, 1933, 1934, and January-March, 1935 871
9. Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1920 and 1925–34 872
10. Index Numbers of a Family Budget of Staple Foods, Fuel and Lighting, and Rent in Canada, by Provinces, 1925–34 873

Section 3. *Index Numbers of Security Prices* 873–877
11. Investors Index Numbers of Common Stocks, by Months, 1933 and 1934 874–875
12. Weighted Index Numbers of Prices of Mining Stocks, by Months, January, 1932, to March, 1935 876–877

CHAPTER XX.—PRICES—concluded.

PAGE.

Section 4. *Prices of Services* ... 877–878
13. Average Daily Hospital Charges in Canada and Index Numbers Thereof, 1913 and 1919–33 ... 878
Section 5. *Index Numbers of Interest Rates* ... 878–879
14. Index Numbers of Interest Rates in Canada, Calculated from Yields of Ontario Bonds, 1900–35 ... 879
Section 6. *Index Numbers of Import and Export Valuations* ... 879–880
15. Index Numbers of Export and Import Valuations, calendar years 1924–33 ... 880

CHAPTER XXI.—PUBLIC FINANCE.

Section 1. *Dominion Public Finance* ... 881–915
Subsection 1. The Current Balance Sheet of the Dominion ... 886–887
1. Balance Sheets of the Dominion of Canada, as at Mar. 31, 1933 and 1934 ... 887
Subsection 2. Receipts and Disbursements ... 888–896
2. Details of Revenue Receipts, fiscal years ended Mar. 31, 1930–34 ... 888–889
3. Details of Expenditures, fiscal years ended Mar. 31, 1930–34 ... 889–890
4. Principal Items of Dominion Expenditure, 1868–1934 ... 891–893
5. Principal Items of Receipts (Consolidated Fund) and Total Receipts, 1868–1934 ... 894
6. Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditure, 1868–1934 ... 895
7. Per Capita Revenue Receipts and Expenditure, by Principal Items, 1928–34 ... 895–896
Subsection 3. War Tax Revenue ... 896–899
8. War Tax Revenue Received by the Receiver General, fiscal years ended Mar. 31, 1915–34 ... 897
9. Summary of Excise War Taxes Collected by the Department of National Revenue, (formerly the Department of Customs and Excise), fiscal years ended Mar. 31, 1929–34 ... 897
10. Excise War Taxes Collected by the Department of National Revenue, by Provinces, fiscal year ended Mar. 31, 1933 ... 898
11. Excise War Taxes Collected by the Department of National Revenue, by Provinces, fiscal year ended Mar. 31, 1934 ... 899
Subsection 4. Inland Revenue ... 900–902
12. Details of Excise Duties Collected, fiscal years ended Mar. 31, 1929–34 ... 901
13. Number of Excise Licences Issued, fiscal years ended Mar. 31, 1928–34 ... 901
14. Statistics of Distillation, fiscal years ended Mar. 31, 1929–34 ... 901–902
15. Quantities of Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, fiscal years ended Mar. 31, 1911–34 ... 902
Subsection 5. Subsidies and Loans to Provinces ... 903–905
16. Subsidies of Dominion to Provincial Governments, fiscal years ended 1929–34 ... 903
17. Total of Subsidy Allowances from July 1, 1867 to Mar. 31, 1934 ... 903
18. Loans to Provincial Governments Under the Relief Acts, by Provinces, fiscal years ended Mar. 31, 1932–35 ... 904
19. Loans to Provincial Governments Outstanding, on Account of Housing, by Provinces, as at Mar. 31, 1920–34 ... 905
Subsection 6. National Debt ... 905–915
20. Summary of the Public Debt of Canada and Interest Payments Thereon, July 1, 1867 to Mar. 31, 1934 ... 908
21. Details of the Active Assets of the Public Debt of Canada, as at Mar. 31, 1923–34 ... 909
22. Details of the Gross Liabilities of Canada, as at Mar. 31, 1923–34 ... 909–910
23. Funded Debt and Treasury Bills of the Dominion, Interest Thereon, Date of Maturity, Rate of Interest and Centres at Which Loans are Payable, as at Mar. 31, 1934 ... 910–911
24. The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913–34 ... 912
25. Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914–34 ... 913
26. Securities Guaranteed by the Dominion Government, as at Mar. 31, 1934 ... 913–915
Section 2. *Provincial Public Finance* ... 915–931
Subsection 1. Provincial Revenues and Expenditures ... 916–924
27. Ordinary Revenues of Provincial Governments for their respective fiscal years ended 1933 ... 918–919
28. Ordinary Expenditures of Provincial Governments for their respective fiscal years ended 1933 ... 920–921
29. Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended in the census years 1871–1911 and in each year from 1916 to 1933 ... 922–923
30. Ordinary Revenues and Expenditures of Provincial Governments per head of Population for their respective fiscal years ended in the census years 1871–1911 and in each year from 1916 to 1933 ... 924
Subsection 2. Provincial Debts and Assets ... 925–931
31. Balance Sheets of the Provincial Governments for their respective fiscal years ended 1933 ... 926–929
32. Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, fiscal years 1916 to 1933 ... 930
Section 3. *Municipal Public Finance* ... 931–936
33. Number of Municipalities in Canada, by Provinces and Classes, 1932 ... 932
34. Summary Statement Showing Total Assessment Valuations of Municipalities, by Provinces, for 1929–32 ... 933–934
35. Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-32 ... 935

CHAPTER XXI.—PUBLIC FINANCE—concluded.

PAGE.

36. Principal Financial and Other Statistics of Canadian Cities and Towns with Populations of 10,000 and over, 1932 ... 935–936

Section 4. *National Wealth and Income* ... 937–947

Subsection 1. National Wealth ... 937–939

37. Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 ... 938

38. Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1929 ... 939

Subsection 2. National Income and Income Tax Statistics ... 940–946

39. Total and Per Capita Production of the Gainfully Occupied Population in 1932, Based upon the Survey of Production, 1932, and the Percentage of Persons Occupied in the Production of Form Utilities as Found at the Census of 1931 ... 942

40. Amounts of Income Assessed for the Purposes of the Income War Tax, by Individuals and Corporations, fiscal years ended Mar. 31, 1921–34 ... 943

41. Amounts of Income Assessed for the Purposes of the Income War Tax, by Provinces, fiscal years ended Mar. 31, 1930–34 ... 943

42. Amounts of Income Tax Collected, by Provinces, fiscal years ended Mar. 31, 1930–34 ... 944

43. Numbers of Individual and Corporate Tax Payers, by Size of Income and Amount of Taxes Paid under the Income War Tax Act, fiscal years ended Mar. 31, 1931–34 ... 944–945

44. Income Tax Paid, by Occupations of the Tax Payers, fiscal years ended Mar. 31, 1931–34 ... 945

45. Amount Received from Special Five Per Cent Tax on Interest and Dividends, fiscal year ended Mar. 31, 1934 ... 946

Subsection 3. Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere ... 946–947

46. Estimated British and Foreign Investments in Canada, Jan. 1, 1931 ... 947

47. Estimated Total Investments of Canadian Capital in British and Foreign Countries, as at Jan. 1, 1931 ... 947

CHAPTER XXII.—CURRENCY AND BANKING; LOAN AND TRUST COMPANIES.

Section 1. *Canada's Monetary System* ... 948–956

1. Value of Gold Bullion Received for Treatment and Value of Gold Coin and Bullion Issued from the Ottawa Mint, 1908–16 and by years, 1917–34 ... 950

2. Statement of Coinage (in Dollar and Cent Denominations) Issued to the Dominion of Canada, 1858–1934 ... 950

3. Composition of Canadian Gold Reserves on Dec. 31, 1905–34 ... 951

4. Circulation in Canada of Silver and Bronze Coin, Dec. 31, 1901–34 ... 951–952

5. Dominion Notes Outstanding and Reserves as at June 30, 1900–34 ... 953

6. Gold Held by the Minister of Finance and Dominion Notes in Circulation, calendar years 1919–34 ... 954

7. Denominations of Dominion Notes in Circulation, as at Mar. 31, 1929–34 ... 954

8. Statistics of Bank Note Circulation, calendar years 1900–34 ... 955

9. Circulating Media in the Hands of the General Public, calendar years 1900–34 ... 956

Section 2. *Banking in Canada* ... 956–992

Subsection 1. The Canadian Banking System in General ... 957–976

10. Historical Summary Showing Development of the Canadian Banking Business, calendar years 1867–1934 ... 968–969

11. Assets of Chartered Banks in the calendar years 1931–34 ... 970

12. Liabilities of Chartered Banks in the calendar years 1931–34 ... 971

13. Deposits in Chartered Banks in Canada and Elsewhere, for the calendar years 1930–34 ... 972

14. Loans of Chartered Banks in Canada and Elsewhere, for the calendar years 1930–34 ... 972

15. Bank Reserves in Detail and Total Net Liablities, calendar years 1901–34 ... 974–975

16. Ratios of Bank Reserves to Net Liabilities, calendar years 1901–34 ... 976

Subsection 2. The Individual Chartered Banks of Canada ... 976–986

17. Numbers of Branches of Chartered Banks in Canada, by Provinces, Dec. 31, 1868, 1902, 1905, 1920, 1926, 1930–34 ... 977

18. Number of Branches of Individual Canadian Chartered Banks in each Province and in Other Countries as at Dec. 31, 1933 ... 977

18A. Number of Branches of Individual Canadian Chartered Banks in each Province and in Other Countries as at Dec. 31, 1934 ... 978

19. Number of Branches of each of the Canadian Chartered Banks in Other Countries, with their Locations, Dec. 31, 1933 and 1934 ... 978

20. Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1929–34 ... 979

21. Principal and Total Assets of each of the Chartered Banks of Canada, Dec. 31, 1933 ... 980

21A. Principal and Total Assets of each of the Chartered Banks of Canada, Dec. 31, 1934 ... 981

22. Principal and Total Liabilities of each of the Chartered Banks of Canada, Dec. 31, 1933 ... 982

22A. Principal and Total Liabilities of each of the Chartered Banks of Canada, Dec. 31, 1934 ... 983

23. Bank Insolvencies in Canada since 1867 ... 984–985

24. Bank Absorptions in Canada since 1867 ... 986

Subsection 3. The Volume of Business Transacted through the Banks ... 987–990

CHAPTER XXII.—CURRENCY AND BANKING; LOAN AND TRUST COMPANIES—concluded.

PAGE.

25. Amounts of Exchanges of the Clearing Houses of Chartered Banks in Canada for the calendar years 1930–34 ... 988
26. Bank Debits at the Clearing-House Centres of Canada, by Individual Centres, calendar years 1930–34 ... 989–990

Subsection 4. Government and other Savings Banks ... 990–992

27. Deposits with Dominion Government Savings Banks, June 30, 1868–1906, and Mar. 31, 1907–34 ... 991
28. Summary of the Financial Business of the Post Office Savings Bank, Mar. 31, 1929–34 ... 991
29. Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, as at June 30, 1868–1906, and Mar. 31, 1907–34 ... 992

Section 3. *Loan and Trust Companies* ... 993–997

30. Summary Statistics of the Operations of Dominion and Provincial Loan and Trust Companies in Canada, as at Dec. 31, 1932 ... 994
30A. Summary Statistics of the Operations of Dominion and Provincial Loan and Trust Companies in Canada, as at Dec. 31, 1933 ... 994–995
31. Classification of Liabilities and Assets of Loan Companies Chartered by the Dominion Government, as at Dec. 31, 1914–33 ... 995–996
32. Classification of Liabilities and Assets of Trust Companies Chartered by the Dominion Government, as at Dec. 31, 1914–33 ... 996–997

Section 4. *Sales of Canadian Bonds* ... 998–999

33. Sales of Canadian Bonds, by Class of Bond and Country of Sale, calendar years 1911–34 ... 999

Section 5. *Corporation Dividends* ... 1000

34. Dividend Payments by Canadian Companies, 1929–34 ... 1000

Section 6. *Foreign Exchange* ... 1000–1003

35. Monthly Averages of Exchange Quotations at Montreal, 1933 and 1934 ... 1002–1003

CHAPTER XXIII.—INSURANCE.

Section 1. *Fire Insurance* ... 1005–1016

1. Summary Statistics of Fire Insurance in Companies Operating under Dominion Licences, calendar years 1869–1934 ... 1007–1008
2. Fire Insurance Business Transacted in Canada, by Companies, 1933 ... 1008–1012
3. Assets of Canadian Companies Selling Fire Insurance, or Fire Insurance and other Classes of Insurance, and Assets in Canada of Companies other than Canadian Transacting such Business in Canada, 1929–33 ... 1012–1013

19. Insurance other than Fire and Life in Canada, by Classes of Insurance, 1933 ... 1028
20. Income and Expenditure, and Assets and Liabilities of Canadian Companies doing only Insurance Business other than Fire and Life, 1933 ... 1028
21. Income and Expenditure in Canada of Companies, other than Canadian, doing only Insurance Business other than Fire and Life, 1933 ... 1029

CHAPTER XXIII.—INSURANCE—concluded.

PAGE.

22. Dominion and Provincial Insurance in Canada, other than Fire and Life, 1933.... 1030

Section 4. *Government Annuities*.... 1031–1032

23. Government Annuities Contracted for, and Purchase Money Received, fiscal years ended Mar. 31, 1909–34.... 1031
24. Government Annuities Fund Statement, fiscal years ended Mar. 31, 1930–34.... 1032
25. Valuation of Annuity Contracts Issued Pursuant to the Government Annuities Act, 1908, as at Mar. 31, 1933 and 1934.... 1032

CHAPTER XXIV.—COMMERCIAL FAILURES.

1. Commercial Failures in Canada, by Industries, calendar years 1933 and 1934.... 1033–1034
2. Commercial Failures in Canada, by Provinces, calendar years 1933 and 1934.... 1034
3. Commercial Failures in Canada and Newfoundland, by Classes, calendar years 1915–34, and by Provinces, 1934.... 1034
4. Commercial Failures in Canada, by Provinces, calendar years 1922–34.... 1036
5. Commercial Failures in Canada, by Branches of Business, calendar years 1924–34 1036
6. Estimated Assets and Liabilities of Commercial Failures in Canada, calendar years 1922–34.... 1036
7. Commercial Failures in Canada, by Provinces and Branches of Business, calendar year 1933, with Totals for 1932.... 1037
7A. Commercial Failures in Canada, by Provinces and Branches of Business, calendar year 1934, with Totals for 1933.... 1038
8. Totals of Assets, Liabilities, Assets Realized and Cost of Administration in Bankrupt Estates Closed in the calendar years 1933 and 1934.... 1039

CHAPTER XXV.—EDUCATION.

Section 1. *Schools, Colleges and Universities*.... 1040–1043

1. Summary Statistics of Educational Institutions in Canada, by Provinces, 1933, or Latest Year Reported.... 1042–1043

Subsection 1. The Provincially-Controlled Schools.... 1044–1053

2. Provincially-Controlled Schools in Canada: Distribution of 1,457,026 Pupils in Seven Provinces, by Age and Grade, 1932–33.... 1044
3. Historical Summary of Enrolment and Average Attendance in Schools in Canada, by Provinces, 1911–33.... 1045–1046
4. Numbers of Pupils Enrolled and in Average Attendance in all General Schools, and in High School Grades, in Cities of 10,000 or over, by Sex, 1933, or Latest Year Reported.... 1046–1047
5. Provincially-Controlled Schools in Canada: Comparative Numbers of Boys and Girls Doing Work of Secondary Grade in each of Seven Provinces, 1911–33 1048
6. Enrolment in Provincially-Controlled Vocational Schools in Canada, by Provinces, school year ended June 30, 1933.... 1049
7. Average Annual Salaries of School Teachers, by Provinces, 1932–33, or Latest Year Reported.... 1049
8. Provincially-Controlled Schools in Canada: Number of Teachers in Training in Normal Schools and Colleges, by Provinces, 1911–33.... 1050
9. Canadian Provincially-Controlled Schools: Receipts and Expenditures, by Provinces, 1920–33.... 1050–1053

Subsection 2. Higher Education.... 1054–1063

10. Universities and Colleges of Canada: Summary of Degrees and Diplomas Granted, 1932–33.... 1055
11. Universities and Colleges of Canada: Full-Time Students of the Regular Session, by Faculties, 1932–33.... 1056–1059
12. Universities and Colleges of Canada: Financial Statistics, 1932–33.... 1060–1063

Section 2. *Scientific and Industrial Research in Canada*.... 1064

Section 3. *The Libraries of Canada*.... 1064–1065

13. Summary Statistics of Public Libraries, by Provinces, 1933, with totals for 1931.. 1065

Section 4. *Art in Canada*.... 1065

CHAPTER XXVI.—PUBLIC HEALTH AND BENEVOLENCE.

Section 1. *Administration*.... 1066–1067

Section 2. *Institutional Statistics*.... 1067–1084

Subsection 1. Hospitals, other than Mental.... 1068–1080

1. Summary Statistics of Hospitals in Canada, Excluding Mental Hospitals, calendar years 1932 and 1933.... 1069
2. Bed Capacities of Hospitals, by Provinces, Excluding Mental Hospitals, calendar years 1932 and 1933.... 1069
3. Hospital Statistics, by Provinces, with Personnel, Hospital Facilities, Movement of Hospital Population, and Financial Statistics, calendar years 1932 and 1933 1070–1079
4. Patients Treated and Treatments Given in Out-Patient Departments of Hospitals in Canada, Excluding Mental Hospitals, calendar year 1933.... 1080

Subsection 2. Mental Hospitals.... 1080–1083

5. Statistics of Capacity, Staff and Finances of Mental Institutions in Canada, by Provinces, 1933.... 1081

CHAPTER XXVI.—PUBLIC HEALTH AND BENEVOLENCE—concluded.

PAGE.

6. Movement of Patient Population in Mental Hospitals of Canada, by Provinces, calendar year 1933 ... 1082–1083
Subsection 3. Child-Caring Institutions, Refuges for Adults, Homes for Incurables, etc. ... 1084
7. Summary Statistics of Homes and Hospitals for Incurables, calendar year 1932 ... 1084

CHAPTER XXVII.—JUDICIAL AND PENITENTIARY STATISTICS.

Section 1. *General Tables* ... 1087–1090
1. Convictions for Criminal Offences, by Classes, and Total Convictions for Minor Offences, with Proportions to Population, years ended Sept. 30, 1911–33 ... 1088
2. Convictions for Criminal and Minor Offences, by Class of Offence, Compared as to Numbers and Ratios, years ended Sept. 30, 1929–33 (Including Juveniles) ... 1088–1089

[1]Estimated populations are given for inter-censal and post-censal years. [2]1897. [3]The figures for the decennial census years 1871-1921 are for the next preceding years, those for 1871 are for the four original provinces only. Export prices have been used in working out values of dairy products. [4]The figures for 1934 are subject to revision. [5]Cwt.

[6]See Monthly Bulletin of Agricultural Statistics for May, 1921, for particulars of the values of field crops for the years 1871, 1881, 1891 and 1901. [7]Includes Canadian Navy. [8]Figures are for 1907. [9]The figures for occupied and improved farm lands, field crops, live stock, home-made butter, miscellaneous dairy products and raw furs have been revised since their publication in the 1933 Year Book. [10]Previous to 1931 this item does not include skim milk and buttermilk.

[1] 1887. [2] 1874. [3] 1886. [4] 000's omitted. [5] The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands, while those of 1891, 1901, 1911 and 1916 are for works with 5 hands and over except in the case of butter and cheese factories, flour and grist mills, electric light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures for these years are for the preceding years in each case. From 1922 statistics are exclusive of construction, hand trades, repair and custom work. Figures for 1925-30 include non-ferrous metal smelting not included in earlier

relate to the fiscal years ended June 30 up to 1906, and from then on to the years ended Mar. 31. Agricultural, dairying, fisheries (1922-26), mineral, manufacturing, banking, insurance, loan and trust companies statistics relate to the calendar years and railway statistics to the years ended June 30, 1871–1916, and to the calendar years 1921 and 1924–28. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

ERRATUM.

P 85. Number of votes polled for Quebec in 1921 should read 779,591 instead of 779,951.

CHAPTER I.—PHYSIOGRAPHY.

PART I.—GEOGRAPHICAL FEATURES.*

Situation.—The Dominion of Canada comprises the whole northern half of the North American continent except the United States territory of Alaska, and the Coast of Labrador, a dependency of the Colony of Newfoundland. It also includes the Arctic archipelago between Davis strait and the connecting waters northward to the 60th meridian on the east, and the 141st meridian on the west.

The Dominion is bounded on the west by the Pacific ocean and Alaska; on the south by the 49th parallel, the Great Lakes, the St. Lawrence river and additional lines set out by the Ashburton Treaty, signed Aug. 9, 1842; and on the east by the Atlantic ocean, the gulf of St. Lawrence, the territory of the Coast of Labrador (as defined by the award of the Privy Council, Mar. 1, 1927), and Davis strait. As regards the far north, Canada includes all the lands in the area bounded on the east by a line passing midway between Greenland and Baffin, Devon and Ellesmere islands to the 60th meridian of longitude, following this longitude to the pole, and on the west by the 141st meridian of longitude, following this longitude to the pole. The southernmost point is Middle island in lake Erie, in north latitude 41° 41′, while from east to west the Dominion extends from about west longitude 57°—at the southernmost point of the boundary with the Coast of Labrador—to west longitude 141°, the boundary with Alaska. Canadian territory thus extends over 84° of longitude and 48° of latitude.

Area.—The area of the Dominion is 3,694,863 square miles, a figure which may be compared with that of 3,738,395 square miles for the United States and its dependent territories, 3,776,700 the total area of Europe, 2,974,581 the total area of Australia, 4,277,655 the total area of China inclusive of dependencies, 3,275,510 the area of Brazil, 1,805,252 the area of India, 121,633 the area of the British Isles and 13,318,000 the area of the British Empire. By comparison with the last two figures, Canada is seen to be over 30 times as large as the British Isles and to comprise over 27 p.c. of the total area of the British Empire.

Political Subdivisions.—Canada is divided from east to west into the following provinces: the Maritime Provinces of Prince Edward Island, Nova Scotia and New Brunswick, all three comparatively small in area; Quebec, covering a strip south of the St. Lawrence and the whole territory north of the St. Lawrence and east of the Ottawa to Hudson strait, except the territory of the Coast of Labrador; Ontario, extending northward from the Great Lakes to Hudson bay; Manitoba, Saskatchewan and Alberta, the provinces of the interior continental plain, extending from 49° to 60° north latitude; and British Columbia, the province of the western mountain and Pacific Coast region, also extending from 49° to 60°. North of the 60th parallel of latitude, the country is divided into the Yukon Territory and the Northwest Territories, the latter area composed of the provisional districts of Mackenzie, Keewatin and Franklin.

Prince Edward Island.—This, the smallest province of the Dominion, lies in the southern bend of the gulf of St. Lawrence and is separated from the mainland

*Revised by F. H. Peters, Director of the Topographical Survey, Department of the Interior, Ottawa.

by Northumberland strait. It is about 120 miles in length and, with an average width of 20 miles, covers an area of 2,184 square miles, approximately 200 square miles more than the State of Delaware. The island is almost trisected by the deep indentations of Malpeque bay north of Summerside and by the mouth of the Hillsborough river at Charlottetown, which nearly meets Tracadie bay on the north side. Its rich red soil and red sandstone formations are a distinctive feature, and no point in the island attains a greater altitude than about 450 feet above sea-level. A climate tempered by the surrounding waters of the gulf and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The province is noted for its relative predominance in the fox-farming industry, its lobster canneries, and its production of oats and potatoes.

Nova Scotia.—The province of Nova Scotia is 381 miles in length by from 50 to 105 miles in width, a long, narrow strip of land lying parallel to the Maine and New Brunswick coast and joined to the latter province by the isthmus of Chignecto. It includes at the north the island of Cape Breton, which is separated from the mainland by the narrow strait of Canso. The total area of the province is 21,068 square miles, a little over 2,000 square miles less than the combined area of Belgium and Holland. Cape Breton island, south of the main entrance to the gulf of St. Lawrence and sheltering Prince Edward island from the Atlantic, is roughly 100 miles in length with an extreme breadth of 87 miles. Its area of 3,970 square miles encloses the salt-water lakes of Bras d'Or, connected with the sea at the north by two natural channels and at the south by the St. Peters ship canal. The ridge of low mountainous country running through the centre of the Nova Scotia mainland, the highest altitude of which is less than 1,500 feet, divides it roughly into two slopes. That facing the Atlantic is generally rocky and open to the sweep of Atlantic storms, but the other, facing the bay of Fundy and Northumberland strait, consists for the most part of fertile plains and river valleys noted for general farming and for fruit-farming districts which produce the famous Nova Scotian apples. The Atlantic coast is deeply indented with numerous excellent harbours many of which provided splendid homes and refuges for the old sail fishing fleets.

New Brunswick.—With a total area of 27,985 square miles, New Brunswick may be compared in size to Scotland with its area of 30,405 square miles. The province is very compact and in shape nearly rectangular, with its depth not greatly exceeding its width. The conformation is in general undulating and of low relief. In the southeastern half of the province the ground elevation does not generally exceed 500 feet above sea-level except for a narrow strip in the south which produces the highlands bordering the bay of Fundy east of Saint John. In the northwestern half the ground elevation is in general from 500 to 1,000 feet above sea-level and reaches its greatest elevation of about 2,690 feet in Northumberland county northeast of Grand Falls. The St. John, rising in the sister province of Quebec and the bordering State of Maine, is a river with many distinctive beauties, while its length of nearly 400 miles makes it quite noteworthy as to size. In the northeastern half of the province there are very extensive areas of Crown lands still carrying valuable stands of merchantable timber. While New Brunswick is essentially a part of the mainland, the bay of Chaleur at the north, the gulf of St. Lawrence and Northumberland strait at the east, the bay of Fundy at the south and Passamaquoddy bay at the southwest, provide the province with a very extensive sea-coast. To its southwest is a group of islands belonging to the province, the most important of

which are Grand Manan, Campobello, and the West Isles. New Brunswick has been called the best watered country in the world; numerous rivers provide access to extensive lumbering areas in its interior and to many of the most attractive hunting and fishing resorts in the Dominion.

Quebec.—Quebec might with considerable accuracy be included among the Maritime Provinces, for the gulf of St. Lawrence is really a part of the Atlantic, and altogether salt water washes the coasts of the province for a length of over 2,700 miles. Besides including a narrow strip of land between the St. Lawrence and the International and New Brunswick boundaries, Quebec extends northward from the St. Lawrence and Ottawa rivers to Labrador and Hudson strait, covering over 17° of latitude and an area of 594,534 square miles, about 38 p.c. of which lies south of the isotherm of 60°F. mean July temperature.* The combined areas of France, Germany and Spain are about 2,600 square miles less than the area of Quebec. The conformity of the surface of Quebec is in general that characteristic of the Precambrian rocks, being quite even in general but much diversified by minor hills and hollows. North of the St. Lawrence the land takes the form of a ridge, parallel to the river and rising from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet and then descending gently again to the sea-level of Hudson bay to the northwest; but to the northeast the ridge carries its height to end abruptly in the high headlands of Labrador. South of the river, the area is comprised of the St. Lawrence Lowlands between Montreal and Quebec which, rising to the east, produce the highest elevation in the province, of about 4,200 feet, in the Gaspé peninsula. With the exception of the treeless zone extending somewhat south of Ungava bay the whole of the province supports a valuable tree growth varying from the mixed forest in the southwest to the eastern and northern coniferous in the areas of higher latitude. Apart from its importance as the threshold of Canada and the gateway through which ocean vessels must pass on their way to the interior of the continent Quebec is also noted for its natural resources. The extensive timber limits of its northern areas form the basis for the great pulp and paper industry of the present and the future. Its rivers, many of them as yet comparatively unknown, may be harnessed to supply about two-fifths of the electric power available in Canada. Its mineral deposits, particularly those of asbestos, have long been known for their quality and extent, while more recent developments of copper and gold deposits in Rouyn and the neighbouring townships in the western part have brought the province up to third place in mineral production in Canada. The fisheries of the St. Lawrence river and gulf are well known. Agriculturally, the climate and soil of the upper St. Lawrence River valley and the plains of the Eastern Townships are eminently adapted to general farming operations.

Ontario.—The province of Ontario is the section of the Dominion contained between the great international lakes and Hudson bay and between the western boundary of Quebec and the eastern limits of Manitoba. Although generally regarded as an inland province, Ontario has a fresh-water shore line on the Great Lakes of more than 2,362 miles and on the north a salt-water shore line of about 680 miles with a tidal port at Moosonee at the southern end of James bay. The southernmost point of Ontario, which is also the southernmost point of the Dominion, is in north latitude 41° 41′—a little further south than the northern boundary of the State of California—and its most northern, in north latitude 56° 48′. The total area comprised within its limits, of which about 82 p.c. lies south of the isotherm of

*The isotherm of 60° F. mean July temperature is generally considered as the northern limit for the economic production of cereals.

60° F. mean July temperature,* is 412,582 square miles, of which its fresh-water area of 49,300 square miles forms the unusually large proportion of 12 p.c. The province is over 17,000 square miles greater in area than are France and Germany together, and when compared with the States to the south, Ontario is found to be almost equal in extent to the combined areas of the six New England States, together with New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan and Wisconsin. Excepting in the southwestern part, the surface conformity of Ontario is influenced by the characteristics of the Precambrian rocks. In northern Ontario a large area with elevations of 1,000 feet or over adjoins the north shore of the Great Lakes and going north a short distance over the Height of Land the slope descends very gently to Hudson bay, which has a wide marginal strip less than 500 feet above sea-level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of lake Superior. The whole province supports a valuable covering of trees, varying from south to north, from the mixed forest to the eastern and northern coniferous. Many varieties of climate and soil are encountered, from the distinctively southern conditions found along the shores of lake Erie to the very different ones of Hudson and James bays. Ontario, of all the provinces of Canada, is the centre of the country's manufacturing life, owing to its abundant water-power resources and its proximity to the coal fields of Pennsylvania, but the many resources of its rural districts are not on this account neglected. Mining is an important industry in the Sudbury, Porcupine, and Kirkland Lake districts, the nickel coming from the Sudbury field amounting to 90 p.c. of the world production, while as regards gold production the province ranks first in Canada. Fruit farming in the Niagara district and general farming throughout the entire southern part of the province are carried on extensively under unusually favourable conditions, while timber, pulp and furs are among the most important products of more northern parts.

Manitoba.—Manitoba, the most easterly of the Prairie Provinces, and also the oldest of them in point of settlement, includes the area between Ontario on the east and Saskatchewan on the west. Its southerly limit is the International Boundary, while its northerly boundary is the 60th parallel of latitude and Hudson bay, where its coast of over 400 miles includes the harbour and port of Churchill. The total area of Manitoba, of which about 56 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 246,512 square miles—3,246 square miles greater than twice the total area of the British Isles. The conformity of the surface of Manitoba is quite even; commencing on the north with a strip bordering on Hudson bay perhaps 100 miles wide and less than 500 feet in elevation, the surface rises gradually towards the west and south. The bulk of the province has an elevation of between 500 and 1,000 feet, with the greatest height of 2,727 feet attained in Duck mountain, northwest of lake Dauphin. East and north of lake Winnipeg the Precambrian formation intrudes, producing a rock formation, but the remainder of the province is overlain by very fertile soil of great depth. The treeless prairie belt extends into the southwest corner of the province, but the greater portion of the developed area is in the grove belt, characterized by groves of poplar interspersed with open prairie patches; to the north there are great areas of northern mixed forest, blending into the northern coniferous, which thin again to some treeless areas along the coast line farther north. The province has been regarded as typically agricultural, its southern lands being specially adapted to this form of industry. Its northern districts, however, are of importance in the production of timber and also contain large mineral

*See footnote, p. 3.

deposits particularly of copper-gold ore. About three-fifths of the area of this province is underlain by the Precambrian rocks which have been found so rich in minerals in northern Ontario and northern Quebec.

Saskatchewan.—This central prairie province lies between Manitoba and Alberta; it reaches to the International Boundary on the south and its northerly limit is the 60th parallel of latitude, which divides it from the Northwest Territories. The area, of which about 89 p.c. lies south of the isotherm of 60°F. mean July temperature,* is 251,700 square miles, approximating that of Manitoba, and greater by 5,000 square miles than the combined areas of the British Isles and Norway. With the exception of a point of the Precambrian rocks jutting in from the east at the Height of Land, well to the north, and again covering a narrow strip along the northern boundary, the whole of the province is overlain by generally fertile soil of great depth. The greater part of the developed area in the south is comprised in the great treeless prairie belt, fringed to the north with a zone of poplar, interspersed with open prairie, which gradually changes into the northern mixed forest covering all the northerly parts. Apart from the southern prairies, which are extraordinarily smooth, the surface topography is generally of low relief and with a general rising slope towards the west. The bulk of the province has a general elevation of between 1,000 and 2,000 feet, with the maximum elevation of about 4,500 feet on the eastern point of the Cypress hills in the southwest corner. The climate is quite different from that of Eastern Canada, with less precipitation and perhaps slightly more severe features than are encountered in many other parts of the country, but is nevertheless most favourable to plant and animal growth. The northern districts, abundantly watered by lakes and rivers, are rich in timber resources and have prospective mineral wealth, while the southern plains include a large portion of the wonderful western wheat fields.

Alberta.—Lying between Saskatchewan on the east, and the Rocky mountains and the 120th meridian on the west, and bounded on the north and south by the Northwest Territories and the United States respectively, is the province of Alberta. Its area is slightly greater than that of Saskatchewan or Manitoba, comprising a total of 255,285 square miles, of which about 90 p.c. lies south of the isotherm of 60° F. mean July temperature.* The area of the province is over 8,600 square miles greater than the combined areas of the British Isles and Norway. Like Saskatchewan, the southern part of the province is comprised in the dry treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie, which again gives way to the northern mixed forest covering the northerly parts. The Precambrian rocks just touch Alberta at its northeast corner, so that excepting the fringe of mountainous country on its western border the whole of the province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace river, which has already resulted in the extension of settlement farther north than in any other part of Canada, and (2) the wonderful grazing lands in the foothills district, which, rising sharply on the west, commences the ascent which continues to the very peaks of the Rocky mountains. The southern half of the province, rising toward the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half the slope descends until elevations of well under 1,000 feet are reached at lake Athabaska in the northeast corner. Mount Columbia, with an elevation of 12,294 feet, is the highest point in the province. Considerable coal and oil mining are carried on, lumbering is important in the more mountainous western parts and in the north, while some ranching is still pursued in

*See footnote, p. 3.

the less populous sections. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the "Chinook" winds.

British Columbia.—British Columbia, the most westerly province of the Dominion, comprises an area of 366,255 square miles, slightly more than three times the area of the British Isles. The predominant feature of the province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys, many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Apart from the smoother area in the northeast corner which extends up from the "Peace River Block" there is another notably large area of smoother terrain in the Stuart Lake district traversed by the Canadian National Railways running west from Fort George to Prince Rupert. The highest point in the province is Mount Fairweather (15,287 feet). The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and with wonderful scenic aspects. With two ocean ports served by transcontinental railways British Columbia is well situated and equipped to carry on trade with the Orient, while its great stands of fir, spruce and cedar timber constitute a natural resource of great value. The province includes many islands of the Pacific, notably the Queen Charlotte group and Vancouver island; the latter, with an area of about 12,408 square miles, is noted for its temperate climate and abundant natural resources. The mines, timber, fisheries and agricultural resources of the province are remarkable for their quality and extent. The boundaries of the province extend from Alberta on the east to the Pacific ocean and Alaska on the west, and from the International Boundary northward to Yukon.

Yukon and Northwest Territories.—The vast area of 1,516,758 square miles is included within the boundaries of Canada's northern subdivisions, the Yukon Territory and the three provisional districts of the Northwest Territories. This is over twelve times the area of the British Isles, nearly half the area of the United States, and more than the combined areas of the Argentine Republic and Chile in South America. The northern territories are as yet, in parts, unexplored and excepting the main through water routes are still in many places unmapped in any accurate way. The territories are known to include mighty rivers like the Mackenzie and the Yukon and great inland bodies of water such as Great Slave and Great Bear lakes; but with the present paucity of accurate knowledge the potentialities of this great area are at present unknown. The many general indications of mineral wealth in the country together with the recent mineral discoveries in the Great Bear Lake-Coppermine River area suggest that the future may well reproduce the great gold rush to Yukon in 1897. Because a large portion lies within the Arctic circle the tendency has been to associate with the Northwest Territories thoughts of ice and snow, but as our knowledge is increased the argument steadily gains more weight that what have been regarded in the past as the great 'barren lands' of the north are more appropriately described as our great northern prairies. The opening of the port of Churchill, making the Hudson Bay coast of the district of Keewatin readily approachable, adds considerably to the transportation facilities, which previously have been confined to a regular steamboat summer route down the Mackenzie river. In the future it is likely that travel and transport by air will have a great influence in the further development of these territories, while a net of established radio stations already brings a large area within the realm of quick

communication. The production of minerals in Yukon in 1933 was valued at $2,041,223, while the value of the production of furs in the Northwest Territories and Yukon in the 1932-33 season was $1,241,281.

Summary of Land and Water Area.—The total land and fresh-water area of the Dominion, together with its distribution by provinces and territories, is shown in Table **1.**

1.—Land and Fresh-Water Area of Canada, by Provinces and Territories, as in 1934.[1]

[1]The salt-water areas of Canada are excluded. [2]Approximate.

Section 1.—Orography.

The conformation of the present surface of the North American continent admits of its apportionment, in Canada, into several orographic divisions. The exposed surface of the old Precambrian continent forms one of the largest divisions and has been called the Canadian Shield, the Archæan Peneplain and in its southern portion, the Laurentian Highland. The mountainous country of the west constitutes the Cordilleras, while the mountains of eastern United States, in their continuation across the border, form the Appalachian Highland of Eastern Canada. The Great Plains, with various subdivisions, occupy the area between the mountainous area of the west and the great roughened surface of the Canadian Shield. The St. Lawrence Lowlands lie between the Laurentian and Appalachian Highlands. Within the borders of the Canadian Shield an area on the southern margin of Hudson bay has been referred to as the "clay belt". It occupies a part of the basin that during the glacial period was submerged and covered with a coating of clay which smoothed over its inequalities and concealed most of the underlying rocks. Since its emergence the surface has been but slightly altered by drainage channels cut across it.

Orographical maps of Eastern and Western Canada, showing elevations above sea-level, will be found on pp. 8 and 10 of this volume.

Canadian Shield.—The portion of the Precambrian continent whose exposed surface still forms a large part of Canada has an area of about two and a half million square miles. Its northern border crosses the Arctic archipelago and the eastern lies beyond Baffin island and Labrador and reaches the depressed area occupied by

OROGRAPHY OF EASTERN CANADA AND LABRADOR.

the St. Lawrence river, a short spur or point crossing this valley at the outlet of lake Ontario to join the Adirondack mountains in New York. The southern boundary runs from this spur west to Georgian bay, skirts the north shore of lake Huron and sweeps almost around the ancient depressed area occupied by lake Superior. The western edge, from the lake of the Woods and lake Winnipeg, bears northwest to the western end of lake Athabaska, and passes through the basins occupied by Great Slave and Great Bear lakes, reaching the Arctic ocean east of the Mackenzie River delta. In detail, the surface features of the Canadian Shield are irregular, but, viewed broadly, it has the conformation of a great plain, depressed toward the centre and in the north and slightly elevated along the eastern and southern borders where it presents a rather steep outward slope. The general elevation in the eastern portion is under 2,000 feet and over the larger part of the plain is about 1,000 feet. The highest portion is along the northeastern margin, where it presents a steep face to the sea, rising to a maximum altitude of about 5,500 feet.

Appalachian Region.—The continuation of the Green mountains of Vermont into Canada may be traced in the Notre Dame mountains, which approach the St. Lawrence northeast of Quebec and, continuing with more easterly trend, form the highland of the Gaspé peninsula. Over a large part of the region, these hills hardly attain the dignity of mountains, but peaks rising more than 3,500 feet above the nearby coast are found in the Gaspé peninsula. The continuation of the White mountains of New Hampshire is found in the highlands of Maine and New Brunswick, the continuity being shown quite plainly by the rock-folding and other evidences of the great earth movements which caused the topography. An additional ridge apparently forms the present province of Nova Scotia, and although the highlands of that province do not attain elevations of even 1,500 feet, the rock structure indicates that it was a mountainous country at no very remote geological period.

St. Lawrence Lowlands.—The southern interior of the continent consists of a plain of low relief, bordered on the east by the Appalachian mountains, on the west by the Cordilleran Mountain systems, and on the north by the Laurentian plateau. This plain, in its Canadian portion, is known as the St. Lawrence Lowlands, and extends from a short distance below Quebec city to lake Huron, south of Georgian bay, having a length of 600 miles and an area of 35,000 square miles. To the northeast it becomes reduced in width, and in the vicinity of Quebec is represented by a narrow plateau or shelf on each side of the St. Lawrence river.

Great Plains.—A great area, including diverse features, lies to the east of the Cordilleras. The portion that is included under the term Great Plains extends from the southwestern edge of the ancient surface, forming the Canadian Shield, to the eastern edge of the mountainous region of the Cordilleras. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of soil, through which the streams have cut themselves down into deep coulées and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow; in the dry prairie section there are many places where the absorption from the broad and shallow bodies of water is so great that they have little or no outflowage and consequently the concentration of mineral salts in the water makes it unfit for domestic use. The terrain is generally smooth or gently undulating and with elevations of from 600 to 3,500 feet has a general upward slope toward the south and west where, rising more sharply in the foothills, the real ascent to the high mountains commences.

OROGRAPHY OF WESTERN CANADA.

Cordilleran Region.—The western part of the American continent is more or less mountainous. The Andean chain, which extends throughout the length of South America and broadens out in the United States has, in Canada, an average width of about 475 miles. This region, covering about 530,000 square miles, is the most elevated in the Dominion, many of the summits reaching heights of 10,000 feet, with occasional peaks over 13,000 feet above sea-level. The mountainous tract forming the Cordilleras can be divided broadly into three parallel bands: a series of plateaus and mountains, comprised in the Columbia, Interior, Cassiar, and Yukon systems, forming the central part, referred to as the Central Belt; another series of parallel ridges east of the central plateaus, formed of fault rocks and folds and including the Rocky and Arctic systems, known as the Eastern Belt; and a third division between the plateau country and the Pacific, composed of the Pacific and Insular systems, called the Western Belt.

Table 2 shows the principal named Canadian Cordilleran peaks exceeding 11,000 feet in elevation.

2.—Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.

NOTE.—The highest mountain in Eastern Canada, with the exception of the Torngats in Labrador peaks of which rise to about 5,500 feet, is Tabletop mountain (recently re-named Mount Jacques Cartier by the Geographic Board of Canada) in N. lat. 48° 59′, W. long. 65° 56′, Gaspé district, Quebec, the summit of which is 4,160 feet above sea-level.

[1]This peak is on the international boundary between British Columbia and Alaska.

[2]The enumerated peaks in Yukon are on or near the Yukon-Alaska Boundary.

Section 2.—Rivers and Lakes.

General.—The waterways of Canada constitute not only one of its most remarkable geographic features, but one of the most vital elements of its national existence. The fresh-water area of 228,070 square miles is unusually large, constituting over 6 p.c. of the total area of the country. The Great Lakes, with the St. Lawrence river, form the most important system of waterways on the continent and one of the most notable fresh-water transportation routes in the world. Their value in facilitating the cheap and speedy shipment of grain from the Prairie Provinces cannot be overestimated. These lakes never freeze over, but usually most of their harbours are closed by ice about the middle of December and remain frozen over until the end of March or the beginning of April.

Drainage Basins.—The great drainage basins of Canada are the Atlantic (524,900 square miles), the Hudson Bay (1,486,000 square miles), the Pacific (387,300 square miles), the Arctic (1,290,000 square miles) and the Gulf of Mexico (12,365 square miles). Table **3** indicates the drainage areas of the more important rivers.

3.—Drainage Basins of Canada.

NOTE.—Owing to overlapping and to the fact that minor basins are omitted, the totals of each drainage basin do not represent an addition of the drainage areas as given. Tributaries and sub-tributaries are indicated by indentation of the names. The Gulf of Mexico basin is that part of the southern area of the Prairie Provinces drained by the Missouri and Mississippi rivers and their tributaries.

The St. Lawrence River System.—Most important of the lakes and rivers of Canada is the chain of the Great Lakes with their connecting rivers, the St. Lawrence river and its tributaries. This chain is called the St. Lawrence River system. The Great Lakes, separating the province of Ontario from the United States and connected by a series of canals with the St. Lawrence river, allow vessels to proceed from the Atlantic ocean to the interior of the Dominion as far as Fort William and Port Arthur, twin cities situated on lake Superior, practically half way across the continent. The present waterway provides a draught of 30 feet as far as Montreal, 14 feet through the remainder of the St. Lawrence river and 20 feet on the Great Lakes.

Other River Systems.—Apart from the St. Lawrence, the great waterway of the eastern half of the Dominion, other systems also merit some attention. The Saskatchewan river, for example, flowing eastward from the Rocky mountains to lake Winnipeg and thence northward by the Nelson river into Hudson bay, drains a great part of the plains of the western provinces. In the north, the Mackenzie river, with its tributaries the Slave, Liard, Athabaska and Peace rivers, follows the northerly slope of the Great Plain and empties into the Arctic ocean, its waters having traversed in all a distance of 2,514 miles. The Yukon river, after draining a

great part of the Yukon Territory, flows northward through Alaska into the Behring sea after a course of 1,765 miles. The Fraser, Columbia, Skeena and Stikine rivers flow into the Pacific ocean after draining the western slopes of the mountains of British Columbia. Table 4 gives the lengths of the principal rivers with their tributaries, classified according to the course taken by their waters.

4.—Lengths of Principal Rivers and Tributaries in Canada.

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

The Great Lakes.—Table 5 shows the length, breadth, area, elevation above sea-level and maximum depth of each of the Great Lakes. Particularly notable are the depth of lake Superior and the shallowness of lake St. Clair and lake Erie.

5.—Areas, Elevations and Depths of the Great Lakes.

Lake.	Length.	Breadth.	Maximum Depth.	Area.	Elevation above Sea-level.
	miles.	miles.	feet.	square miles.	feet.
Superior	383	160	1,180	31,810	602·29
Michigan	320	118	870	22,400	581·13
Huron	247	101	750	23,010	581·13
St. Clair	26	24	23	460	575·62
Erie	241	57	210	9,940	572·52
Ontario	180	53	738	7,540	246·17

Lake Superior, with an area of 31,810 square miles, is the largest body of fresh water in the world. As the international boundary between Canada and the United States passes through the centre of lakes Superior, Huron, St. Clair, Erie and Ontario, only a part of the areas of these lakes given in the above statement is Canadian, while the whole of lake Michigan is within United States territory. The total length of the St. Lawrence waterway, from the head of the St. Louis river in Minnesota to Pointe-des-Monts at the entrance of the gulf of St. Lawrence, is 1,900 miles. The tributaries of the St. Lawrence, several of which have themselves important tributaries, include the Ottawa river, 696 miles long, the St. Maurice river, 325 miles long, and the Saguenay (to head of Peribonka), 405 miles long.

Other Inland Waters.—In addition to the Great Lakes, there are large bodies of inland water in other parts of Canada. Of these only the following principal lakes, with their respective areas, need be mentioned: in Quebec, lake Mistassini (840 square miles); in Ontario, lake Nipigon (1,590 square miles); in Manitoba, lake Winnipeg (9,398 square miles), lake Winnipegosis (2,086 square miles) and lake Manitoba (1,817 square miles); in Manitoba and Saskatchewan, Reindeer lake (2,444 square miles); in Saskatchewan and Alberta, lake Athabaska (2,762 square miles). All these are within the boundaries of the provinces as at present constituted and are exclusive of lakes situated in the Northwest Territories, the largest of which are Great Bear lake (11,660 square miles) and Great Slave lake (11,170 square miles) in the district of Mackenzie.

Table 6 gives a list of the principal lakes of Canada by provinces, with the area of each in square miles. The table corresponds with the delimitation of the provinces as altered by the Boundary Extension Acts, 1912 (2 Geo. V, cc. 32, 40 and 45).

Section 3.—Islands.

The islands of Canada are among its most remarkable geographic features. They include the numerous unsurveyed and little known areas of the Arctic regions, the fringe of both large and small islands off the Pacific coast, those of the Maritime Provinces and Quebec in the Atlantic ocean and the gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. Of the Arctic islands, but little need be said. They are known to be of vast extent, Baffin, Victoria and Ellesmere, the three largest, being approximately 201,600, 80,450 and 75,024 square miles in area respectively, but Banks, Devon, Southampton, Somerset, Prince of Wales, Melville and Axel Heiberg are also of considerable size. Their economic possibilities, beyond scattered deposits of coal and other minerals, have not been established. The Pacific Coast islands, with the exception of Vancouver island and the Queen Charlotte group, are small and dot the western coast of British Columbia from Dixon entrance to the southern boundary of the province. Vancouver island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte islands farther north. These islands figure largely in the mining, lumbering and fishing industries of the West.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the island of Cape Breton (an integral part of Nova Scotia), Anticosti and the Magdalen group (included in the province of Quebec) and the islands of Grand

Manan and Campobello (part of the province of New Brunswick) in the bay of Fundy. Prince Edward island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti of about the same extent. Fishing activities in these eastern islands are important, while agriculture on Prince Edward island and mining on Cape Breton are among the chief occupations of the inhabitants.

Manitoulin island in lake Huron and the Thousand Islands group in the St. Lawrence river, at its outlet from lake Ontario, are the more important islands of the inland waters.

PART II.—GEOLOGY.

Section 1.—Geology of Canada.*

The outstanding feature of Canadian geology is the vast area underlain by formations of Precambrian age. These occupy nearly the whole of Canada east of a line joining lake Winnipeg and Great Bear lake with the exception of the Maritime Provinces, the extreme southern parts of Ontario and Quebec, and a part of Ontario adjacent to the southern coast of Hudson bay. The Precambrian rocks are the oldest rocks exposed on the earth's surface, and the vast area which they underlie is one that has probably existed as a land mass throughout longer periods than any other part of Canada.

These ancient formations extend, with gentle sloping surface, in almost all directions beneath a mantling series of nearly flat-lying sedimentary rocks of Palæozoic, Mesozoic and Cenozoic age. These little disturbed sediments occupy southern Quebec, southern Ontario, the Prairie Provinces and the Northwest Territories. Some of them were at one time of much wider extent and covered part or all of the Precambrian area.

Towards the Atlantic and Pacific coasts the Palæozoic and later sediments, together with the older rocks on which they rest and assemblages of volcanic rock, are intensely folded and faulted, forming the Appalachian system of mountains on the east and the great Cordillera, comprising nearly all of British Columbia and Yukon, on the west.

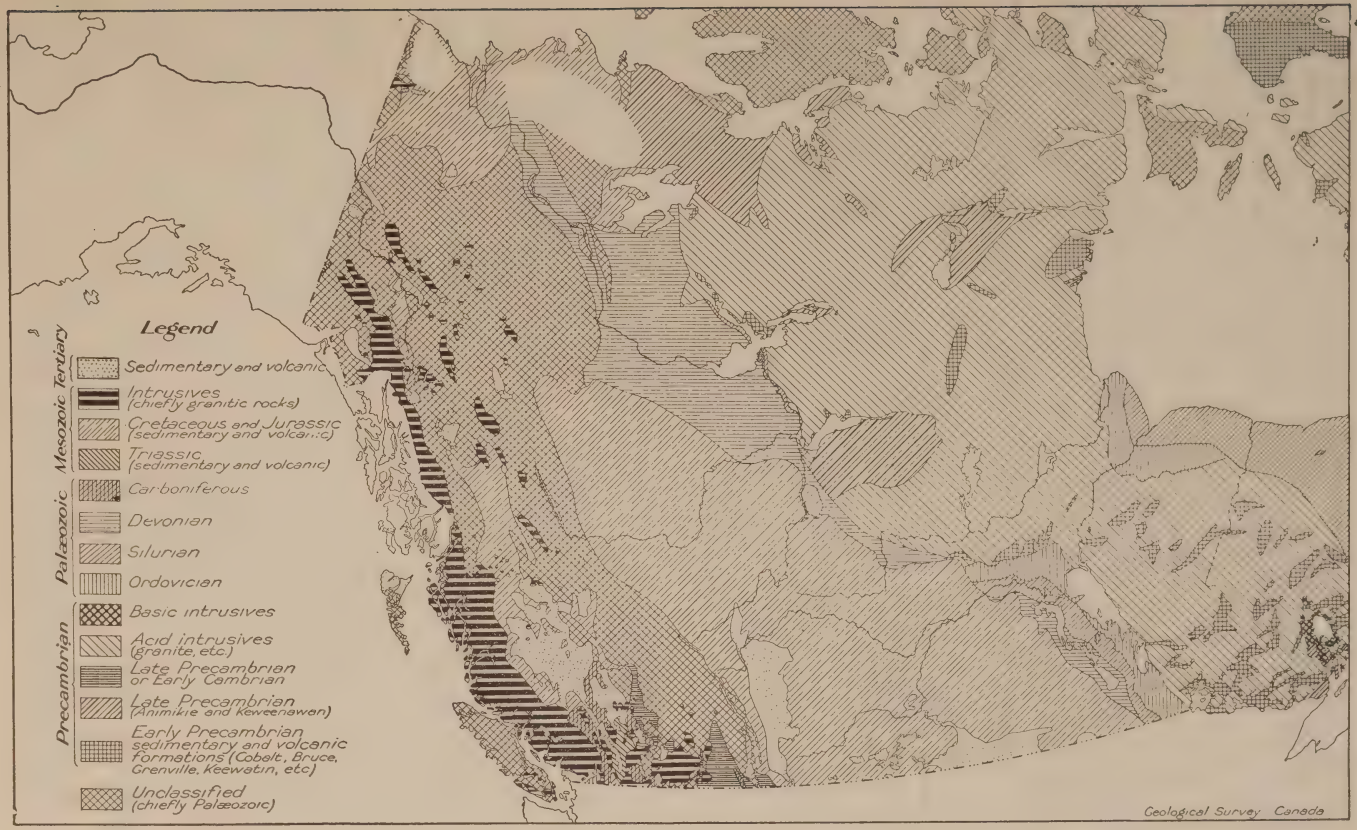
Subsection 1.—Topography.

The present topography of Canada is the temporary outward expression of a half continent which is subject to unceasing change. It is the result of the operation of geological processes at the surface of the earth or at depth throughout hundreds of millions of years. It derives from the injection of igneous rock masses in liquid form beneath the surface, the ejection of lavas and volcanic fragmental material, the deposition of sediments, the folding and faulting of rock formations, and the disintegration of solid rocks and transportation of the products of disintegration by surface agencies. The slow rising and sinking of broad continental land masses and the upheaval and subsequent gradual levelling of mountain ranges are involved.

The great area in Eastern Canada underlain by rocks of Precambrian age is known as the Canadian (or Precambrian) Shield or the Laurentian Plateau. It may be regarded as a subdued plateau or perhaps, more strictly speaking, a peneplanated surface that has been rejuvenated by Pleistocene glaciation and uplift.

*By Wyatt Malcolm, M.A., Geological Survey, Ottawa.

GEOLOGY OF EASTERN CANADA AND NEWFOUNDLAND.



87473—2½

Its average elevation probably does not exceed 1,500 feet, and, except in the northeast, there are few areas that exceed 2,000 feet. In general, the surface slopes gently to the surrounding plain and there are long stretches of the boundary in which there is no marked difference of elevation between the Precambrian Shield and the adjacent Palæozoic plain; there are other long stretches in which there is an abrupt rise of several hundred feet above the plain or the sea. The greatest known elevations are in the eastern part of Baffin island and along the coast of northern Labrador. Peaks of the Torngat mountains of Labrador have elevations of between 4,000 and 5,000 feet. The coast is one of the boldest and most rugged in the world, with nearly vertical cliffs rising 1,000 to 2,000 feet in height. Though the Canadian Shield is an area of low relief and has a remarkably even sky line, the surface is generally rugged with successions of rocky hills 100 to 200 feet high. Occasional exceptions occur in which there is a relief of several hundred feet, as in the hills on the north shores of lake Huron and lake Superior. The area is dotted with lakes, large and small, of irregular outline and with numerous islands. They are rock basins that spill their waters from one to another by streams with rapids and falls. In an area of 250 square miles in western Ontario that cannot be considered exceptional, aerial surveys have shown that there are 700 lakes. There are well-defined deep trenches like that occupied by lake Timiskaming, related to faulting or other structural features. The Saguenay river flows in a trench that descends to more than 800 feet below sea-level, and lake Superior, the largest body of fresh water on the face of the earth, fills a basin in the Canadian Shield that reaches about 400 feet below sea-level.

Extending south and west from the Canadian Shield and limited on the east by the Appalachian Mountain system and on the west by the western Cordillera of America, is the great North American plain. The northeastern part of this plain occupies southern Ontario south of a line extending from Georgian bay to the east end of lake Ontario, that part of eastern Ontario lying between the Ottawa and St. Lawrence rivers, and the part of Quebec lying adjacent to the St. Lawrence between Montreal and Quebec. The part of the plain west of the Canadian Shield is of wide extent, and stretches northward to the Arctic ocean between a line approximately joining lake Winnipeg, lake Athabaska, Great Slave lake and Great Bear lake on the east, and the foothills of the Rocky mountains on the west.

Although these areas are but parts of one great plain and are disconnected in Canada only because the Canadian Shield happens to project across the International Boundary in a narrow belt east of lake Ontario and in a wide zone between lake Huron and the lake of the Woods, they will, for convenience of treatment, be considered separately. Those parts lying in the basin of the St. Lawrence and the Great Lakes have been designated the St. Lawrence Lowlands, while the western area has been named the Interior Plains.

The part of the St. Lawrence Lowlands lying in the eastern angle of Ontario and in Quebec south of Montreal, and extending down the St. Lawrence, is comparatively flat and lies less than 500 feet above sea-level. On the lower St. Lawrence it is greatly narrowed by the near approach of the Appalachian system to the Canadian Shield. The part lying adjacent to lakes Ontario, Erie and Huron is of less even surface, has its greatest elevation of over 1,700 feet south of Georgian bay, and slopes rather gently to the Great Lakes. A striking topographical feature is the Niagara escarpment. This is an eastward-facing escarpment having a height of 250 to 300 feet and extending from the Niagara peninsula northwest to Bruce peninsula.

GEOLOGY OF WESTERN CANADA.

The Interior Plains region is in general a rolling country with broad undulations and a slope eastward and northward of a few feet per mile, descending from an elevation of 3,000 to 5,000 feet near the mountains on the west to less than 1,000 feet at its eastern border. The elevation of the Canadian Pacific Railway at Calgary is 3,439 feet and at Winnipeg 772 feet. The rolling character of the area is relieved by several flat-topped hills—erosion remnants rising hundreds of feet above the surrounding country, by flat areas that formed the beds of lakes of considerable extent, and by deeply incised river valleys. A striking feature is the broken escarpment of western Manitoba and eastern Saskatchewan, marking the rise of 400 to 1,000 feet from the Manitoba lowland to the upland of the west. A lowland of considerable extent stretches for some distance into Ontario and Manitoba from the south shore of Hudson bay.

The Arctic archipelago consists of large islands, many of which rise prominently from the sea as sloping table lands while others are comparatively low.

The Appalachian and Acadian regions occupy practically all that part of Canada lying east of the St. Lawrence, with the exception of the lowland west of a line joining Quebec city and lake Champlain. The Appalachian region is a continuation northward into the province of Quebec of three chains of the Appalachian system of mountains. The most westerly of these ranges stretches northeast into Gaspé peninsula, where it forms flat-topped hills over 3,000 feet high. Mount Jacques Cartier or Tabletop mountain has an elevation of 4,350 feet. The Acadian region, which includes New Brunswick, Nova Scotia, and Prince Edward Island, is an alternation of uplands and lowlands. The northwest part of New Brunswick is an upland with hills and ridges rising to 2,500 feet or higher. Adjacent to the bay of Fundy is a series of ridges rising in places to an elevation of 1,200 feet or more. Between these two New Brunswick uplands, which converge towards the southwest, is a lowland forming the whole eastern part of the province. This lowland extends east so as to include Prince Edward island, the western fringe of Cape Breton island and the mainland of Nova Scotia north of the Cobequid mountains, which have an elevation of 800 to 1,000 feet. South of them lies a long narrow lowland stretching from Chedabucto bay to Minas basin and along the Cornwallis-Annapolis valley between North and South mountains. South of this is a highland sloping to the Atlantic coast and having an elevation at its highest part of about 700 feet. The northern part of Cape Breton island is a tableland 1,200 feet high, with its central part rising to an elevation considerably in excess of this, one point at the headwaters of Clyburn and Cheticamp rivers being 1,747 feet above sea-level.

The Cordilleran region, the mountainous area bordering the Pacific, extends northward from the United States through Canada into Alaska, and embraces nearly all of British Columbia and Yukon, and the western edge of Alberta and the Northwest Territories. The eastern part of the Cordillera is occupied by the Rocky mountains. They consist of overlapping chains with peaks rising to heights of 10,000 to 12,000 feet. They extend northwest and fall away towards the Liard river. North of this river the mountains with a similar trend lie 100 miles farther east and are known as the Mackenzie mountains. The western part of the Cordillera is occupied by the Coast range and the mountains of Vancouver and Queen Charlotte islands. The Coast range rises to heights of 7,000 to 9,000 feet. Between the Rocky mountains and the Coast range lies a vast plateau system having elevations of 3,000 to 4,000 feet, and cut by deep river valleys. The plateau region merges into rugged mountain ranges as it approaches the Rocky mountains; it also breaks into mountains in northern British Columbia, but becomes subdued to a plateau

again in Yukon. A striking feature of the Cordillera is the deep trench that lies immediately to the west of the Rocky mountains, extends northwesterly from the International Boundary into Yukon and is occupied by the head waters of the Kootenay, Columbia and Fraser rivers, and tributaries of the Peace and Liard rivers.

Subsection 2.—Geology.

Canadian Shield.—The Canadian Shield is underlain by rocks of Precambrian age. These consist of series of sedimentary and volcanic formations and igneous intrusives of great varjety. They were subjected to mountain-building processes, folded, crushed and metamorphosed, and the mountains were reduced nearly to their present level before the earliest Palæozoic sediments were deposited. The Precambrian period was probably of greater duration than all the subsequent geological periods taken together.

Geologists do not agree on the main subdivisions of the Precambrian formations. There is one great unconformity, which represents a long period of erosion, and which divides the stratified rocks into two groups, the earlier group consisting of a great mass of volcanics with associated sedimentary rocks and the later group consisting more fully of sediments. The earlier group is greatly folded and altered; the later group has in general been less disturbed and altered.

In the earlier group the most important series is the Keewatin. The Keewatin consists essentially of lava flows accompanied in many places by tuffs and basic intrusives, and includes iron formation, which frequently is made up of thin layers of chert-like quartz, alternating with quartzose layers holding magnetite or hæmatite or both. Sedimentary rocks consisting of conglomeratic, sandy and slaty strata are frequently associated with the volcanics and are, in places, of considerable thickness and extent. They may underlie the volcanics, like the Couchiching of the Rainy Lake area; they may be interbedded with the volcanics, like the Doré formation of Michipicoten; or they may overlie the volcanics, like the Timiskaming formation of northeastern Ontario and western Quebec. Between the volcanics and overlying sediments of northeastern Ontario and western Quebec there is an unconformity that is regarded by some geologists as of major importance. The early Precambrian formations occupy numerous areas of various sizes up to several hundred square miles in western Quebec, northern Ontario, eastern and central Manitoba, and to a less degree in Saskatchewan and the Northwest Territories.

The later Precambrian formations consist in a large measure of sedimentary rocks—conglomerates, quartzites and slates. In an area lying immediately north of lake Huron and stretching northeast to beyond lake Timiskaming lies a succession of sediments known as the Huronian. These consist of: (a) the Bruce series, made up of conglomerates, quartzites and impure dolomitic limestone with an aggregate thickness of 2,700 to 12,000 feet; and (b) the Gowganda series, made up of boulder conglomerate and other materials probably of glacial origin, overlain by quartzite and calcareous quartzite, with an aggregate thickness of 12,000 feet. An erosion interval of considerable time intervened between the deposition of these two series. These strata are undulating with gentle dips except on the north shore of lake Huron and eastward, where they stand at high angles and represent the core of an ancient mountain range that probably flanked the southern edge of the continent.

North of lake Superior the later Precambrian rocks are represented by a group of nearly flat-lying sediments known as the Kaministikwan group. This group

embraces: the Animikie series of conglomerate, iron formation, and shale; the Sibley series of conglomerate, sandstone, limestone, and tuff; and the Osler series of lavas, conglomerate, sandstone and tuff.

In northwestern Manitoba the Precambrian formations are separated by an unconformity into an earlier Wekuskoan group of lavas and sediments and a later group of Missian sediments. Farther north in the Canadian Shield, the areas underlain by the complex of altered volcanics and sediments of early Precambrian age are fewer and smaller and are found on Great Slave lake, Great Bear lake, Ferguson river, and at Cape Smith and a few other places.

Strata, presumably of late Precambrian age, are known to occur on lake Athabaska, Great Slave lake, east of Great Bear lake, on Belcher islands, on the east of Hudson bay and at other points in the Ungava peninsula. In the southern part of Ungava peninsula sediments are found that bear a resemblance to the Grenville-Hastings group of southern Quebec and southeastern Ontario.

The Grenville-Hastings group consists of closely folded, highly altered sediments intruded by, and in places interleaved with, granite. They are in general rusty-weathering banded gneisses, quartzose gneisses grading into quartzites, crystalline limestones, amphibolites, pyroxene-rich rocks and volcanic schists. Pegmatite dykes are common and anorthosite occupies large areas. The Grenville-Hastings group forms a belt in the southern part of the Canadian Shield, extending east from Georgian bay. The formations have not as yet been indubitably correlated with the Keewatin and Huronian rocks to the north.

The Precambrian sediments have suffered intrusion at various times by granites. These have been unroofed at different stages in the history of the Precambrian, and pebbles of granite are found in the conglomerates as early as those of Keewatin age. So complete has been the unroofing of the granites that they are exposed over the greater portion of the Canadian Shield. Basic intrusives were common in later Precambrian times. Sills and dykes of diabase cut the late Precambrian sediments around lake Nipigon, to the west of lake Timiskaming and at many other points. A thick laccolith of norite and micropegmatite is found in the Sudbury district.

The Canadian Shield was intensely glaciated during Pleistocene times, and in general only a scant amount of soil was left, sufficient partially to conceal the rocks and maintain a forest growth. In some areas, as in part of northern Ontario and Quebec, adjacent to the Canadian National Railway, stratified fine sediments were deposited in lakes formed in front of the retreating glacier.

The Precambrian formations are prolific of mineral deposits of great number, variety and extent. These latter occur generally at or near the contact of the intrusives and the intruded rocks. Among them are the gold deposits of Porcupine and Kirkland Lake, associated with intrusions of porphyry, the silver deposits of Cobalt, South Lorrain and Gowganda, associated with diabase sills, the enormous nickel-copper deposits of Sudbury, associated with norite of a thick laccolithic intrusion, the auriferous copper sulphides of western Quebec, the copper-zinc sulphides of Manitoba, the pitchblende and silver deposits of Great Bear lake, and the iron ores and iron pyrites of many localities of Ontario; in the Grenville-Hastings area are found deposits of galena, mica, graphite, feldspar, magnesite, fluorite, kaolin, molybdenite, talc and apatite.

St. Lawrence Lowlands.—The St. Lawrence Lowlands are divided into two parts by an arm of the Laurentian Plateau that extends southward into New York State, crossing the St. Lawrence between Kingston and Brockville. They are

underlain by nearly horizontal Palæozoic sediments dipping gently away from the Canadian Shield and resting on the sloping surface of Precambrian rocks which, prior to the deposition of the Palæozoic strata, had been reduced to a physiographic condition similar to that existing on the Canadian Shield to-day.

The sediments are almost wholly of marine origin, consist mainly of limestone, magnesian limestone and shale, and range in age from late Cambrian to late Devonian.

In the Ottawa-Montreal division the latest strata are Ordovician; these, together with the Potsdam sandstone (Cambrian), have a thickness of about 6,000 feet. In the Great Lakes region of southern Ontario the Ordovician formations are succeeded upward by those of Silurian age and these in turn by strata of Devonian age. The Ordovician formations form a zone extending from Kingston to the Niagara escarpment and stretching northwest to Georgian bay and into Manitoulin island. The Silurian formations are exposed in the Niagara escarpment and westward in a belt 25 to 50 miles wide stretching northwest from Niagara peninsula into Manitoulin island. West of this nearly the whole of the area between lake Erie and lake Huron is underlain by Devonian limestones and shales. Each in turn is exposed over an area farther to the southwest than the older and underlying formation, so that in travelling westward from Kingston to Sarnia one passes over the bevelled edges of successively younger strata. Borings made at Courtright, in the township of Moore, show a thickness of nearly 4,260 feet of sedimentary rocks.

It is probable that the seas in which some of these sedimentary rocks were formed extended northward over the Precambrian rocks through Hudson bay into the Arctic ocean. The presence of outliers on lake St. John, lake Nipissing, and lake Timiskaming in the south, and on lake Nicholson west of Hudson bay, of broad areas of Ordovician, Silurian and Devonian formations south of Hudson bay, and of Cambrian, Ordovician, Silurian and Devonian formations on the islands of the northern part of Hudson bay and of the Arctic seas, is clearly indicative of wide submergence. On the Arctic islands formations of Carboniferous (with coal seams) and Triassic ages are widespread, and there are patches of Tertiary sediments (with lignite). Sediments of Cretaceous age with lignite are found in Moose River basin.

The St. Lawrence Lowlands were covered by the glaciers of Pleistocene time, and the bedrock is to a great extent concealed by thick deposits of glacial till. In places are found stratified deposits that formed in lakes at the edge of the retreating ice sheet. Marine deposits were laid down in an arm of the sea that extended up the St. Lawrence and Ottawa valleys to a point above Ottawa.

The only intrusives worthy of mention are the igneous rocks of alkali types that form the Monteregian hills in southern Quebec, Mount Royal and seven others to the east. They are circular or oval hills that rise 600 to 1,200 feet above the plain and appear to be stock-like bodies or fillings of conduits that may have led to volcanic vents or larger masses of intrusives.

The mineral deposits are such as are usually found in the less altered sedimentary rocks. Petroleum has been produced in southern Ontario for 70 years; natural gas has been produced for 40 years in the counties bordering on lake Erie; salt has been obtained for a great many years from thick beds lying at a depth of about 1,000 feet in the counties bordering on lake Huron and lake St. Clair; gypsum is produced in the Grand River valley; limestone and dolomite, utilized in chemical and metallurgical industries, are widespread; materials for construction, for brick, tile and cement manufacture are abundant.

Appalachian and Acadian Regions.—The Appalachian and Acadian regions are composed of geological formations ranging from Precambrian through Palæozoic to Mesozoic. The Palæozoic sediments pass upward from dominantly marine formations into dominantly continental formations. A complete succession is not found and there are several breaks in sedimentation.

Sediments, probably of Precambrian age, occur in southeastern Quebec, southern New Brunswick, northern Cape Breton island and on the Atlantic coast of the mainland of Nova Scotia. The thick series of slates and quartzites, known as the Gold-bearing series, forms a belt occupying a very considerable part of the mainland of Nova Scotia, faces the Atlantic coast and is probably of late Precambrian age.

During the Palæozoic period numerous disturbances took place in sedimentation; there were periods of uplift, of folding, and of erosion. Cambrian formations are found in southeastern Quebec, Ordovician formations are of extensive development in the Appalachian region from Vermont to Gaspé, Silurian and Devonian are well developed in Gaspé and the northwestern part of New Brunswick. Patches of Cambrian, Ordovician, Silurian and Devonian rocks are found in other parts of the Appalachian and Acadian regions.

The system of sediments most widely distributed in the Maritime Provinces is the Carboniferous. The formations are mainly of continental deposition although during Mississippian time a part of the area was submerged and received marine sediments. Towards the close of Devonian time there was a period of intense mountain building and igneous activity. Granite masses of large size were intruded in Nova Scotia and New Brunswick and of smaller size in Gaspé and southeastern Quebec. The upheaval was succeeded by intense erosion, and in early Carboniferous time granite masses were exposed by the removal of the overlying rocks.

The Carboniferous system occupies the triangular lowland forming much of the southeastern half of New Brunswick, the part of Nova Scotia north of Cobequid mountains, part of the lowland to the south of these mountains, southwestern and northeastern Cape Breton island and Prince Edward island. On Prince Edward island the Carboniferous may pass upward into the Permian. In the Carboniferous system are found the coal measures of Sydney and Glace bay, of Inverness, Pictou and Cumberland counties, Nova Scotia; and of the Minto coal field, New Brunswick. The extensive gypsum deposits and the salt beds of Nova Scotia and New Brunswick are found in a formation of Mississippian age, and the bituminous shales of New Brunswick and Nova Scotia are also of early Carboniferous age. The Carboniferous system has in places been subjected to folding and faulting, but considerable areas have suffered little disturbance since these sediments were laid down.

Sandstone and lava flows of Triassic age are exposed on the bay of Fundy, particularly on the south coast. North Mountain is composed of basic lava flows capping Triassic sandstone. During the Pleistocene period the whole of the Appalachian and Acadian regions, with the exception of the higher parts of Gaspé, was subjected to glaciation.

The most important economic minerals of the Appalachian and Acadian regions are coal, asbestos, and gypsum. Reference has already been made to the occurrence of coal and gypsum. Asbestos occurs in altered peridotite in southeastern Quebec. These are the most productive deposits of the world. Chromite also occurs in the peridotite. Auriferous quartz veins, mainly of the interbedded type, are found on domes and pitching anticlines of the gold-bearing series of Nova Scotia. Zinc-lead deposits occur in the Devonian shales and limestones of Gaspé peninsula, zinc-lead-

copper sulphides in the southern part of Cape Breton island in a series of lava flows, copper deposits in southern Quebec, and salt in Nova Scotia and southeastern New Brunswick.

Interior Plains.—The Interior Plains are underlain by a series of nearly horizontal sedimentary rocks of Palæozoic, Mesozoic and Tertiary ages. The Palæozoic rocks, consisting mainly of limestone, dolomite and shale of Ordovician, Silurian and Devonian ages, form a belt extending north through Manitoba and northwest through Saskatchewan and northeastern Alberta down the basin of the Mackenzie river. East of the Mackenzie, rocks of Cambrian age are exposed in an area of limited extent. The Palæozoic formations rest upon the gently sloping shelf of the Canadian Shield and pass westward with a dip of a few feet a mile beneath the shales and sandstones of Cretaceous age. The Cretaceous formations occupy nearly the whole of the plain from western Manitoba to the Rocky mountains and extend northward nearly to the Mackenzie river. There are also large parts of the Mackenzie basin, particularly of the lower half, in which the Devonian limestones are overlain by Cretaceous sediments. The Cretaceous sediments vary from shales predominantly of marine origin in the east to sandstones predominantly of continental origin in the west. Between the two are alternations of shales of marine origin with sandstones of brackish-water or fresh-water origin.

The Cretaceous beds are overlain in places by sediments of Tertiary age. The most extensive Tertiary formations are found in the hills of southern Saskatchewan and in a belt running north through central Alberta, where they lie in a broad syncline. Glacial till is widespread and clays were deposited in large lakes formed on the retreat of the ice-sheet. A large part of southern Manitoba formed the bed of glacial lake Agassiz.

The Interior Plains region is the great wheat-producing area of Canada. The mining of coal is one of the important industries; bituminous coal and lignite are produced in large quantities in Alberta and lignite in smaller quantities in Saskatchewan. The Cretaceous sediments are the reservoirs of great quantities of natural gas, and these and underlying formations are the source of the oil of the Turner Valley and other oil fields of Alberta. Oil has also been struck in the Devonian rocks north of Norman on the Mackenzie river. Gypsum is obtained from the Palæozoic rocks of Manitoba and also occurs ir northern Alberta.

Western Cordillera.—In the western Cordillera is a very thick complete succession of sediments of Precambrian, Palæozoic, Mesozoic and Tertiary ages.

The Rocky mountains consist of a series of great fault blocks in which an enormous thickness of Palæozoic and Mesozoic sediments is exposed. Many thrusts of great extent have resulted in an over-riding of the Mesozoic sediments by the Palæozoic, and the erosion of the softer strata of the former has produced longitudinal valleys between the harder Palæozoic blocks. The Palæozoic formations consist mainly of limestones with less amounts of sandstone and shale. A succession with few breaks from the Cambrian through the Ordovician, Silurian, Devonian and Carboniferous is found, and probably extends with certain deviations throughout the length of the Rocky mountains and Mackenzie mountains. Between the Cambrian and Precambrian beds there is apparently little angular unconformity, but the variation horizontally in the Precambrian strata, on which the Cambrian formations rest, and a similar variation in the ages of the over-lying Cambrian strata furnish evidence of a long period of erosion. The Mesozoic strata consist of soft shales and sandstones some of which are coal-bearing. Strata of Triassic, Jurassic, and Cretaceous ages are represented.

The mountains to the west of the Rocky Mountain trench in southern British Columbia are composed of a series of late Precambrian quartzites, slates and magnesian limestones of great thickness. There are wide areas in the vicinity of granitic intrusives in which intensive alteration of these sediments has taken place. The Precambrian rocks extend west as far as Upper Arrow and Shuswap lakes and north from the International Boundary probably half the length of the province. Quartzites, mica schists and crystalline limestones with interbands and broad areas of schists of various kinds, and intrusive granite gneiss are found over a wide stretch of the Yukon plateau and are probably of Precambrian age. Slates, quartzites and conglomerates, also probably of the same age, occur along the northern part of the Alaska-Yukon boundary, in the Ogilvie range and in the Kluane district.

On the interior plateau of British Columbia, limestones, quartzites and argillites of Carboniferous age and known as the Cache Creek group are of wide distribution. These are succeeded upward by argillites and limestones and a great mass of volcanic intrusives and effusives of Triassic age, and these are succeeded by sediments and volcanics of Jurassic age. The Triassic and Jurassic formations are widely distributed, are found on the islands to the west, and some at least extend into Yukon.

Formations of Cretaceous age are found on Vancouver and Queen Charlotte islands and in a belt extending up the Fraser and along the eastern edge of the Coast range into the Skeena valley. They are mainly formations of continental origin and carry coal seams, but also include sediments of marine origin and volcanics.

Very early Tertiary times were characterized by widespread orogenic disturbances in the Cordillera. The Rocky mountains were formed and there was much folding and faulting in places in the interior, followed by intense erosion. Tertiary sediments, partly of continental deposition with seams of lignite and partly of marine deposition, occur at many points throughout the interior of the Cordillera and on Vancouver island. Lava flows capping some of these sediments cover broad stretches of the interior plateau.

In Pleistocene time, nearly the whole of the Cordillera with the exception of a large area in Yukon was subjected to glaciation, and glaciation still persists in the mountainous regions. Volcanics of recent age are found in areas of limited extent.

An episode of great economic importance in the geological history of the West was the intrusion of the granitic rocks of the Coast Range batholith and of acid rocks at different points in the interior, particularly in the southern part of British Columbia in Mesozoic times. Many of the more important mineral deposits of British Columbia, such as the copper deposits of Hidden Creek, Britannia and Allenby mountain, the gold-silver deposits of Salmon River district and the silver-lead deposits of the Slocan, had their origin in solutions given off by the magmas of these acid intrusives.

The lead-zinc deposit of the Sullivan mine lies in sedimentary rocks of Precambrian age. The Cretaceous and Tertiary formations carry seams of coal and lignite of great importance. There are economic deposits of other minerals in great variety throughout the Cordillera, and British Columbia is one of the leading mineral-producing provinces of Canada. The gold of the once famous Klondike region was found in placers of an unglaciated area and the gold of the Cariboo district occurs mainly in Tertiary placers that were unaffected or little affected by glaciation.

Section 2.—Economic Geology of Canada, 1932 and 1933.*

The purpose of this paper, continuing a series which has been published in the Year Book over many years, is to call attention to the most important reports and articles treating of the economic geology of Canada and published during 1932 and 1933. The particular articles here referred to, although recently published, do not necessarily contain the best and most complete information on the subjects treated. For further information it is advisable to consult the Dominion and Provincial Departments of Mines. The reference numbers appearing throughout the text indicate the publishers as listed at the end of this paper.

Asbestos.—In a bulletin of the Department of Mines of British Columbia, a description is given by A. M. Richmond of asbestos deposits of British Columbia. The available data upon these deposits is not encouraging; the fibre in general is unsuited for anything but the lowest grade products.

An examination of the geology and asbestos deposits of Thetford map-area, Quebec,[1] is made by H. C. Cooke. Cambrian sericite and chlorite schists, quartzite, basaltic lavas, and grey, green, and red slates, Ordovician black slates and impure quartzites, and post-Ordovician serpentinized dunite, peridotite, pyroxenite, and granite underlie the area. Alteration of the igneous rocks, faulting, the asbestos veins and other veins, and origin and localization of the asbestos deposits are described. Magnetometer observations made by A. H. Miller are also incorporated.

Barite.—In a bulletin of the Department of Mines of British Columbia, A. M. Richmond provides a description of barite deposits of British Columbia. Barite occurring in these deposits would have to be concentrated to be rendered suitable for industrial purposes; markets outside the province are difficult to reach on account of excessive haulage costs; and the United States tariff prevents shipping into that country.

Chromite.—A report is made by M. E. Hurst upon the chromite deposits of Obonga Lake area, Thunder Bay district, Ontario.[3] The basement complex, consisting of volcanics and sediments, is intruded successively by pre-Algoman peridotite, Algoman granite, granite gneiss and pegmatites, and Keeweenawan diabase. Keeweenawan dolomite also occurs in the area. The chromite deposits are associated with a lenticular mass of serpentine and are found close to the contact. The concentrations of chromite are of two types, disseminated and massive.

Clays.—A report upon some undeveloped clay deposits of British Columbia by A. M. Richmond, is presented in a bulletin of the British Columbia Department of Mines. There are many undeveloped common clay deposits suitable for the manufacture of common red brick. Summarized information concerning them and other clay deposits may be found in this report.

A comprehensive study of the clay and shale resources of Turner valley and nearby districts, Alberta,[2] is afforded by W. G. Worcester. The examination of these clay deposits was undertaken with the hope that clays and shales of a kind of quality to warrant their development along commercial lines might be found, thereby helping to provide a market for part of the gas now being wasted. Notwithstanding the many deposits of excellent red-burning shales in the area, their commercial development at this time is not to be recommended on account of lack of suitable transportation and uncertainty of markets for finished products.

*Contributed by P. J. Moran, B.Sc., Geological Survey, Department of Mines, Ottawa.

"Some Clay Deposits of Willowbunch Area, Saskatchewan",[1] is the subject of a report by F. H. McLearn. Refractory and semi-refractory clays occur at two horizons. The lower is that of the Whitemud formation of late Cretaceous age and the higher that of the Willowbunch member of Palæogene age.

A description of the refractory clays of northern Ontario[5] is provided by W. S. Dyer and A. R. Crozier. The clays all belong to the Mattagami or Lower Cretaceous age and occur within a structural depression or basin, the boundaries of which have never been defined but which appear to cover at least 1,500 square miles of territory.

Coal.—B. R. MacKay describes the Corbin coal field, British Columbia[1] and the geology and coal deposits of the Crowsnest Pass area, Alberta.[1] The Corbin field is one of the smallest and at the same time one of the principal producing coal areas in southwestern British Columbia and has gained prominence on account of the great original thickness of one of its coal seams and the remarkable concentration of coal in a small area that has occurred through intense folding and faulting of the measures. The Crowsnest Pass coal area is one of the most important steam-coal producing districts in Alberta. The coals occur on the Lower and Upper Cretaceous ages; they are of bituminous rank and range in quality from poorly coking to strongly coking.

Copper.—Reports upon some of the mineral properties of the Taku district[1] and upon explorations between the Stikine and Taku rivers, British Columbia,[1] are made by F. A. Kerr. Practically all observed deposits are in the main replacement lenses of pyrite, sphalerite, chalcopyrite, and galena in volcanics.

An examination of the Nimpkish Lake quadrangle, Vancouver island, British Columbia[1] is made by H. C. Gunning. The most important mineralization is in Quatsino limestone in the immediate vicinity of intrusives. They are contact metamorphic deposits containing as valuable minerals, chalcopyrite, zinc-blende, sphalerite, galena, with minor amounts of grey copper, and low values in gold.

H. C. Gunning also presents a study of Buttle Lake map-area, Vancouver island, British Columbia.[1] Schistified zones in volcanics are mineralized by pyrite, chalcopyrite, sphalerite, galena with minor amounts of grey copper, and low gold and silver values. Native copper is found in volcanics at Coal creek.

A summary of the geology and mineral resources of northwest Manitoba[1] is furnished by J. F. Wright. Sulphide replacement bodies are found in volcanics, sediments, and sedimentary gneisses; gold quartz veins are found in volcanics, sediments, and in the granites. A detailed description of the geology and progress of development of all important prospects and mines in the area is given.

L. J. Weeks outlines the geology of Rankin Inlet area, west coast of Hudson bay, Northwest Territories.[1] On the south shore of Johnston bay a deposit of copper and nickel sulphides carrying traces of platinum occurs near the base of a lenticular mass of serpentinized basic intrusive.

A description of the Cape Smith sulphide deposits, upper east coast of Hudson bay, Quebec[4] is given by W. B. Airth. In the vicinity of a huge mass of gabbro intruding lava flows are found extensive deposits of massive sulphides containing pyrrhotite with minor amounts of pyrite, arsenopyrite, and chalcopyrite.

The geology of the southern part of Opimiska map-area, Quebec[1] is described by C. Tolman. The most important deposits so far discovered occur in compara-

tively narrow zones of shearing traversing volcanics and sediments or the intermediate and basic rocks intruding them. The metallic minerals are mainly chalcopyrite, pyrite, pyrrhotite, and magnetite.

E. L. Bruce presents a study of the geology and ore deposits of the Arntfield-Aldermac map-area, Beauchastel township, Quebec, in the Annual Report of the Quebec Bureau of Mines. The consolidated rocks of the northern part of the township are chiefly volcanic flows which are intruded by masses of quartz diorite, granitic rocks of various types, and diabase. In the southern part, occupied by the Kekeko hills the rock is conglomerate of the Cobalt series. Deposits of metallic minerals are of two kinds: (1) replacements of shear zones by gold-bearing pyrite and quartz; (2) massive sulphide bodies consisting chiefly of pyrite and pyrrhotite but containing some chalcopyrite and a little gold.

A study of the Waite-Ackerman-Montgomery property, Duprat and Dufresnoy townships, Quebec,[5] is made by J. E. Gill and N. R. Schindler. The known ore deposits occur in volcanics and consist of sulphide lenses arranged in a stack near a high angle fault.

H. W. Fairbairn briefly describes some recent developments in southern Quebec.[1] At South Stukeley, bornite and chalcopyrite are found disseminated in marble; at the Memphremagog mine, four miles east of Bolton, a massive sulphide body mostly pyrrhotite but containing a small amount of chalcopyrite, lies between a black slate and a fine grained igneous rock and copper-lead-zinc sulphides occur in the vicinity of Leadville on the west side of lake Memphremagog.

Gold.—The search for gold in Canada, which has been actively prosecuted for the past few years, is increasing in intensity as the demand for the metal becomes greater on account of the premium in currency which obtains for gold.

H. C. Cooke and W. A. Johnston present a concise résumé of the geology of lode and placer deposits in the Dominion,[1] and the gold industry of Canada is comprehensively reviewed by A. H. A. Robinson.[2]

H. S. Bostock provides a brief statement of the mining industry of Yukon, 1932[1] and upon a gold strike northwest of Carmacks, Yukon.[1]

Lode gold developments in British Columbia are summarized by J. D. Galloway and others in a bulletin of the Department of Mines of British Columbia.

A description of Whitewater gold belt, Taku River district, British Columbia,[1] is given by F. A. Kerr. In replacement zones in volcanics are found pyrite, stibnite, and arsenopyrite. Gold appears to be intimately associated with arsenopyrite.

An examination of the Zeballos River area, Vancouver island, British Columbia[1] is made by H. C. Gunning. Contact metamorphic deposits in sediments and volcanics carry copper and zinc; free gold is found in quartz or quartz and calcite veins associated with pyrrhotite, pyrite, arsenopyrite, zinc-blende, chalcopyrite and galena.

A report upon an examination of part of Cadwallader Creek mining area, Lillooet district, British Columbia[1] is written by W. E. Cockfield. Quartz veins containing minor amounts of sulphides, tellurides, and free gold are found in augite-diorite. The Pioneer and Bralorne properties are located in this area.

A summary of the gold deposits of Manitoba[1] is afforded by A. H. McLaren. The known mineral deposits of importance lie in schists close to granite bodies and consist of sulphide replacement bodies and gold-bearing quartz veins.

The geology and ore deposits of Island Lake and Oxford House areas[1,5] and of Amisk Lake area, Manitoba[1] are indicated by J. F. Wright. Quartz veins carrying free gold and small quantities of sulphides and schistose rock carrying disseminated sulphides are found in the areas.

The vicinity adjoining Rice lake, Manitoba, is occupied by an irregular wedge-shaped roof pendant of metamorphic sedimentary and igneous rocks, enclosed within granite and granite gneiss, all of Precambrian age. A description of the San Antonio mine[5] in this area is given by J. A. Reid and D. J. Kennedy. Free gold associated with pyrite is found in quartz stringers, lenses, and veins in carbonized greenstone.

Available information upon metalliferous possibilities of the mainland portion of the Northwest Territories, outside of Great Bear Lake area,[1] is summarized by C. H. Stockwell and D. F. Kidd.

M. E. Hurst provides a description of the geology of the Sioux Lookout area,[3] Kenora district, Ontario. Sediments and greenstones are invaded by small bodies of quartz porphyry, syenite, and diorite. Mineralization occurs in the form of quartz veins or pyrite replacement zones occupying fractures or shear zones in the greenstones and sediments.

A preliminary study of the Kowkash-Ogoki gold area, Thunder Bay district, Ontario[3] is made by L. F. Kindle. Gold is found in sheared veins of quartz occupying fissures passing through Keewatin greenstones in which rhyolite and iron formation are commonly interbedded, and in mineralized quartz veins which impregnate quartz and feldspar-porphyry dykes. The deposits are generally a combination of these two types. Silver, copper, and iron are also found in the vicinity.

E. S. Moore reports upon the Goudreau and Michipicoten gold area, Algoma district, Ontario.[3] Quartz and sometimes carbonate and quartz fissure veins carrying gold values occur in sheared portions of greenstone and acid lavas and in sheared and brecciated parts of Algoman intrusives.

The geology of the McIntyre mine, Porcupine area, Ontario, by H. G. Skavlem is incorporated in an article entitled "The Story of McIntyre".[6]

The outstanding features of Hollinger geology[5] are indicated by L. C. Gratton and H. E. McKinstry.

A study of the Tyrell-Knight area, Timiskaming district, Ontario,[3] is made by A. R. Graham. Gold-quartz veins are found filling shear zones in volcanics adjacent to granodiorite or dyke rocks.

Bannockburn gold area, Matachewan district, Ontario[3,5] is the subject of papers by H. C. Rickaby. Quartz veins of the fissure type carrying gold values are found in fractures and faults of small displacement mostly in greenstone and close to intrusives.

The geology of the Swayze area[3] and its westward extension[3,4,5] are described by G. D. Furse and H. C. Rickaby. The essential features of all discoveries appear to be favourable structures in form of fractures or shear zones in lavas or sediments combined with the proximity of porphyry or granite intrusions. Gold-bearing quartz veins mineralized with minor amounts of chalcopyrite, galena, sphalerite, and molybdenite are found in the vicinity. Some gold showings are spectacular.

In a report entitled "The Geology of Three Duck Lakes Area, Sudbury District, Ontario",[3] H. C. Laird states that narrow gold-bearing quartz veins occupy well-defined fractures or 'breaks' in the younger granite, or in quartz veins along the contact between an acid intrusive and a basic dyke, commonly lamprophyre.

A description of the geology of the townships of Janes, McNish, Pardoe, and Dana, Sudbury district, Ontario,[3] is given by E. L. Bruce. Veins containing some gold are found in diabase.

R. C. Rowe describes the geology of the Kenty gold prospect,[4] as consisting of Keewatin lavas, bounded north and south by steeply folded ancient sediments, which have been intruded by a large mass of porphyry. The gold-bearing veins occur in a fracture zone which has an approximate length of 500 feet and a width that has not yet been determined. Visible gold is partly associated with tourmaline or pyrite and sometimes it occurs within the quartz and sometimes in quartz crystals.

"Gold Prospecting, Rouyn-Bell River Region, Quebec"[4] by A. H. Lang, provides a popular summary of existing knowledge of gold deposits in this vicinity.

R. C. Rowe describes the geology, mining methods, and milling practice at the Beattie gold mine, Duparquet township, Quebec.[4]

J. J. O'Neil presents the results of a detailed investigation of the Beattie gold mine, in the Annual Report of the Quebec Bureau of Mines. Keewatin lavas and tufaceous sediments, intruded by syenite porphyry and bostonite porphyry, occupy the vicinity. The main Beattie ore body lies on the north border of the syenite porphyry in a sheared zone which is partly in the syenite porphyry and partly bordering bostonite porphyry.

The geology and ore deposits of Palmarolle and Taschereau map-areas, Abitibi county, Quebec[1] are described by A. H. Lang. Mineral deposits discovered to date are quartz veins, shear zones, and replacements, containing disseminated sulphides. A description of the geology of the Beattie mine is incorporated.

A description of the gold deposits of Pascalis and Louvicourt townships, Abitibi county, Quebec,[5] is given by L. V. Bell. The more important deposits may be divided into two classes as follows: quartz-tourmaline veins carrying pyrite and gold and silicified, carbonated, and pyritized bodies carrying gold.

J. E. Hawley gives a description of the Siscoe gold deposit, Dubuisson township, Quebec.[5] The deposits consist of auriferous quartz-tourmaline veins of the fissure-filled type occurring in altered granodiorite.

A detailed description of the gold and copper deposits of Dubuisson township, Quebec, by J. E. Hawley, appears in the Annual Report of the Quebec Bureau of Mines. Gold quartz veins are found in or close to small stocks or tongues of granodiorite or related rocks and in fractures in Keewatin rocks near the intrusive. The veins consist of the following types: quartz and tourmaline, quartz-pyrite-carbonate, quartz-chalcopyrite, and quartz-pyrite-galena-carbonate.

E. A. Goranson describes the mineral deposits of New Ross, Indian Path, Middle River, and Meat Cove, Nova Scotia.[1] At Middle River, auriferous quartz veins occur in metamorphosed, arenaceous, and argillaceous sedimentary rocks which are probably of Precambrian age; manganese mineralization occurs along steeply dipping fissures in a porphyritic biotite granite at New Ross; the Indian Path scheelite deposit occurs in quartz veins near the crest of an anticline. The country rocks are slates and argillites.

Gold Placers.—An article by W. E. Cockfield is written upon the geology of placer deposits.[5] The requisites for formation of placer deposits are: the occurrence of gold in veins or lodes in the country rock, a period of erosion during which

the gold is set free from the country rock, concentration of gold by some agency, but chiefly that of running water, and freedom from glaciation. The last requisite although not absolutely essential is at least highly desirable.

The mining industry in Yukon and parts of northern British Columbia in 1930[1] is summarized by W. E. Cockfield. Dredges are operating in the Klondike district and Sixtymile area, Yukon; placer developments are continued on Otter creek, and Pine creek, Atlin district, British Columbia and the Mayo district, Yukon, furnished the only production from lode mining during the year. An account of a number of operating lode deposits in the Yukon and Atlin districts is given, including latest developments at the Engineer and Ruffner properties.

In a report by H. S. Bostock upon the Livingston placer camp, Yukon,[1] a description of the various creeks and factors that led to the formation and preservation of the deposits are provided.

Douglas Lay in a bulletin of the British Columbia Department of Mines, makes some comments upon the McConnell Creek placer area, British Columbia, in which fine gold and platinum are found. The placer ground at present receiving attention is a concentration of glacial deposits.

Placer and lode gold deposits at Barkerville, Cariboo district, British Columbia, by W. A. Johnston and W. L. Uglow[1] provides a summary of information concerning known gold deposits in the vicinity.

The geology and placer deposits of Quesnel Forks area, Cariboo district, British Columbia,[1] are described by W. E. Cockfield and J. F. Walker. Placer gold is found in ancient stream or pre-glacial gravels, in glacial gravels, in interglacial deposits, and in post-glacial gravels. A description of deposits occurring in the various streams is given.

A study of the geology of the Brisco-Dogtooth map-area, British Columbia,[1] is submitted by C. S. Evans. Late Precambrian to Devonian strata are exposed within the map-area. The only igneous rocks observed are thin flows of Lower Cambrian age and several highly altered beds of volcanic origin occurring in late Precambrian strata. Placer gold and lead-zinc deposits are found in the vicinity.

Articles upon the mineral possibilities of northern Okanagan[1] and the Monashee Creek placers[4] are written by C. E. Cairnes. Placer gold values are found in several creeks; developments upon bench leases on Monashee creek have been encouraging.

An examination of some mineral occurrences in the vicinity of Cranbrook, British Columbia[1] is made by C. E. Cairnes. Placer gold, gold-quartz, silver-lead-zinc, and copper-gold deposits, magnesite, and ornamental stone occur in the area.

Iron.—A study of a deposit of titaniferous magnetite near Burmis, Alberta, by J. A. Allan, appearing in the Annual Report of the Research Council of Alberta, indicates that the quantity of iron rock is relatively small and that the occurrence cannot be regarded as a commercial deposit at the present time.

W. M. Goodwin describes the results of a magnetic survey of Steeprock lake, Ontario,[4] made by Julian Cross. The evidence of the survey appears to indicate that two bodies of hæmatite lie beneath the surface of the lake.

M. E. Hurst provides a description of a deposit of titaniferous magnetite in Angus township, Nipissing district, Ontario.[3] The body of diabase in which the deposit lies is a "Y" shaped mass about four miles long and from one half to one and a half miles wide. It is surrounded by granite gneiss.

A study of the genesis of the ilmenite deposits of St. Urbain, Charlevoix county, Quebec,[7] is made by Joseph L. Gillson. The author concludes that the ores were formed by replacement in the already solid anorthosite and were deposited from solutions, either gaseous or liquid, which soaked through the rock.

Lead.—A report is made by H. C. Gunning upon the H.P.H. group, Nahwitti lake, Vancouver island, British Columbia.[1] Mineralization of the replacement type occurs in limestone. The most important and common type consists of galena and sphalerite; in some places small quantities of pyrite, pyrrhotite, and chalcopyrite are present.

The Clearwater River and Foghorn Creek map-area, Kamloops district, British Columbia,[1] is described by J. F. Walker as being underlain by argillaceous, arenaceous, and calcareous sediments, showing varying degrees of metamorphism, and intrusive granodiorite, granite, greenstone, and numerous granitic dykes and sills. The sedimentary rocks are of Precambrian, Palæozoic, and Tertiary age; the intrusive rocks appear to be Mesozoic. Most of the mineral deposits occur in sedimentary rocks and consist of small quartz-sphalerite-galena veins and small replacements and disseminations of sphalerite and galena in quartzose sediments. There is one occurrence of chalcopyrite with pyrite in the bedded quartz veins and disseminations in the adjacent country rock. Fluorspar and celestite occur as disseminated replacements in the contact phase of an aplitic intrusion.

Manganese.—A compilation of available information upon manganese in Canada[1] is presented by George Hanson. The known manganese deposits of the Dominion are confined chiefly to the Maritime Provinces and to British Columbia. In other parts of Canada there are only a few small non-commercial bog deposits.

Molybdenite.—The Annual Report of the Quebec Bureau of Mines contains a report by J. E. Hawley upon molybdenite deposits of Lacorne township, Abitibi county, Quebec. The bed rocks of the area consist of pre-Keewatin sedimentary and hornblende schist, Keewatin volcanics, and pre-Cobalt intrusives. The molybdenite occurs in quartzose to feldspathic veins or pegmatites.

Nickel.—A preliminary report upon the geology of Great Slave Lake-Coppermine River area, Northwest Territories,[1] is provided by C. H. Stockwell. Precambrian volcanics, sediments and intrusives are found in the area. A nickel-cobalt deposit east of François river and other mineralization found in the area are described.

A paper upon the origin of the Frood ore deposit; Sudbury district, Ontario,[7] is submitted by B. C. Freeman. Mr. Freeman concludes that the Frood ore is not in norite but in reorganized greywacke gabbro and greenstone, that the rocks were altered by ore-depositing agencies, which caused the formation of hornblende, biotite, quartz and andesine, that the four main ore minerals—chalcopyrite, cubanite, pyrrhotite and pentlandite—were formed essentially simultaneously and that the ore body is a magmatic deposit, but it is not wholly the result of crystallization from the melt.

Oil and Gas.—The oil possibilities of Soda creek and Quesnel, Cariboo district, British Columbia,[1] are described by W. E. Cockfield. The chief interest from the point of view of petroleum and natural gas production lies in the rocks of the Fraser River formation of Tertiary age. As all the evidence points to a freshwater origin for the rocks of this formation and as there is no evidence of closely associated marine sediments which may have served as a source of oil, it must therefore be

concluded that the chances of securing commercial supplies of petroleum are not very bright. It is possible some natural gas may be found but it is unlikely that large supplies exist.

A detailed report upon the Milk River area and the Red Coulee oil field, Alberta, is submitted by C. S. Evans.[1] The rocks in the area range from Jurassic to Upper Cretaceous. Logs of wells drilled in the area are incorporated.

B. R. MacKay presents a study of the Mesozoic-Palæozoic contact and associated sediments, Crowsnest district, Alberta, and British Columbia.[1] Operations carried on in Turner valley and other oil fields in Alberta have demonstrated that oil occurs in both the Mesozoic and Palæozoic measures and that one of the most important horizons is at or near the Mesozoic-Palæozoic contact. With the object of gradually accumulating data pertaining to the nature and extent of any unconformities that exist and the changes in thickness and lithological character of the associated sediments that takes place, this examination has been undertaken.

A preliminary study of the oil and gas possibility of the Waterton Lakes-Flathead area, Alberta, and British Columbia,[1] is made by G. S. Hume.

The stratigraphy and structure of the east portion of the Blood Indian Reserve Alberta,[1] is indicated by Loris S. Russell.

A detailed description of oil prospects of Fisher Creek, Two Pine, and Birch Ridge structures, eastern foothills of Alberta,[1] is given and the oil prospects of Great Slave Lake and MacKenzie River areas, Northwest Territories[5] are summarized by G. S. Hume.

An inventory of available data upon oil and gas in Eastern Canada[1] is also made by G. S. Hume. A chapter upon the origin of oil and gas is followed by a comprehensive description of the southern Ontario oil fields; physical features, stratigraphy, structural geology, history of development, and relation of oil and gas production to the stratigraphy are summarized. The stratigraphy, structural geology, and oil and gas prospects of the Moose River basin, the Eastern St. Lawrence region, the Gaspé peninsula and the Maritime Provinces is also described.

Phosphate.—L. Telfer presents a paper upon phosphate in the Canadian Rockies.[5] During Palæozoic time there were deposited in the Canadian Rockies four beds of phosphate rocks, ranging in age from Mississippian to Jurassic. Two of these beds are of probable economic importance if some means of separating the phosphate from the gangue can be devised.

Radium.—H. V. Ellsworth presents a comprehensive treatise upon rare-element minerals of Canada.[1] The chemical and physical properties of metals in this group are stated, the geology is outlined, and the Canadian occurrences indicated. Of especial interest at the present time are two chapters upon radioactivity, radio-elements, and radioactive minerals as geological age indicators.

Accounts of the Great Bear Lake and Coppermine River areas, MacKenzie district, Northwest Territories[1,4,5,7] are given by D. F. Kidd. Copper is found as disseminated native copper in basalts, as amygdaloidal copper in tops of volcanic flows, as sheet native copper in cracks in the basalt, and in large quartz veins in volcanic rocks of the Coppermine River series. Pitchblende associated with silver and silver deposits without pitchblende are found in shear zones in folded sediments and volcanics.

Hugh S. Spence provides a description of the character of the pitchblende ore from Great Bear lake, Northwest Territories.[4,2] Spence classifies the vein types occurring in the areas as: pitchblende-quartz veins, silver-carbonate veins, silver-cobalt-carbonate veins, and cobalt-bismuth-quartz veins.

J. A. Reid also provides a statement upon the geology and mineralization of the Echo Bay region, Great Bear lake, Northwest Territories.[4]

Christopher Riley points out some mineral relationships in the Great Bear Lake area, Northwest Territories.[4] Precambrian volcanics and sediments are intruded by diorite, granite, granite porphyry, rhyolite porphyry, quartz veins, and basic dykes and sills. The most favourable prospecting ground is near the contact of the granites and sedimentaries and volcanics.

Salt.—A short article entitled the "Salt Deposits of Nova Scotia and New Brunswick",[1] by G. W. H. Norman, deals with all known deposits of salt in the Mississippian rocks in these provinces. It is pointed out that further deposits may be established by drilling.

Silica.—A bulletin of the British Columbia Department of Mines includes a survey by A. M. Richmond of the possibilities of manufacturing bottles and glassware in the province. Deposits of fuel, lime, and sodium salts suitable for glass manufacture exist; deposits of silica sand suitable for glass-making have not yet been found close to transportation.

Silver.—The geology of the Bowser River area, Portland Canal district, British Columbia,[1] is described by George Hanson. Those in American Creek area are in the main of the silver-lead type carrying gold values. The deposits of Bowser River country appear to contain more gold than those in the American Creek area.

C. E. Cairnes provides studies of Lightning Peak area, St. Paul group of mineral claims, and mineral deposits of Aberdeen mountain, Osoyoos district, British Columbia.[1] Attractive mineralization, containing important percentages of lead, zinc, and gold values in small amounts, is found in the Lightning Creek area. Quartz veins occur carrying in places free gold and in other places high values in silver and some gold in the St. Paul group.

Aberdeen mountain is underlain by dark grey argillaceous beds interbedded with quartzite strata, limestone, tuffs, and beds resembling conglomerates. Overlying this assemblage of stratified rocks is a wide belt of igneous rocks chiefly of volcanic origin. A quartz ledge carries galena, pyrite, and chalcopyrite.

Some notes on Wallace Mountain camp, Beaverdell area, British Columbia[5] are provided by A. W. Davis. Ore deposits, in which high grade silver predominate, occur in shear zones in quartz diorite. In some cases there is an abundance of pyrite and ruby silver, in others much galena, and in still others quartz is the main constituent.

Water.—D. C. Maddox affords a summary of the Darmody-Riverhurst artesian area, southern Saskatchewan.[1] With exception of a few scattered outcrops of Cretaceous shales and sandstones, the area is underlain by glacial deposits. The limits of the artesian area, general structural conditions, and water levels are outlined. A list of wells in the area is appended.

R. T. D. Wickenden submits a study of interglacial deposits in southern Saskatchewan.[1] The interglacial sands and gravels are of importance as a source of ground water supply at many places, for example at Regina, where the city supply is derived from deposits of this character.

Ground water resources of Moose Jaw, Saskatchewan[1] is the title of an article by W. A. Johnston and R. T. D. Wickenden. The surface deposits of the area are the unconsolidated, chiefly glacial deposits which overlie consolidated or partly hardened rocks. The water resources of the clay plain were investigated to some extent as well as those in the vicinity of Moose Jaw. It was found that these were limited in general, but that there is a large artesian water area lying between Moose Jaw and the southern Saskatchewan river. This area may prove to be of importance as a future source of supply not only to Moose Jaw but for the clay plain in general.

A study of artesian water areas of the west half of Rush Lake and the east half of Elbow quadrangles, southern Saskatchewan[1] is provided by D. C. Maddox.

Miscellaneous.—J. P. Messervey, in the report of the Nova Scotia Department of Public Works and Mines, surveys operations up to date in the exploitation of antimony deposits in Nova Scotia.

The results of an examination by J. A. Allan of a Paskapoo sandstone at Oliver quarry in the vicinity of Cochrane, Alberta, appearing in the Annual Report of the Research Council of Alberta, indicates a satisfactory building stone.

"Feldspar"[2] by Hugh S. Spence, affords a recent study of the occurrences, and production of feldspar in Canada and foreign countries.

In the Annual Report of the Research Council of Alberta, J. A. Allan describes the gypsum deposits near Mowitch and Rock creeks, Jasper Park, Alberta. The gypsum occurs in lenses in steeply dipping Triassic strata.

B. R. MacKay describes phosphate as being found in several localities in the Crowsnest district, B.C., and Alberta[1] at or near the base of the Fernie formation, Jurassic age. The deposit has its greatest development on the borders of the Fernie coal basin and near Crowsnest station has been opened up by a tunnel over 2,000 feet in length. The grade of the deposit, however, is too low to warrant development at the present time.

PART III.—SEISMOLOGY IN CANADA.

An article on Seismology in Canada, by Ernest A. Hodgson, M.A., appeared at p. 37 of the Canada Year Book, 1931.

PART IV.—THE FLORA OF CANADA.

Under the above heading the Canada Year Book, 1922-23, contained an article prepared by the late J. M. Macoun, C.M.G., F.L.S., and M. O. Malte, Ph.D., and revised by the latter. See p. 25 of the 1922-23 edition or p. 73 of the 1921 edition.

PART V.—FAUNAS OF CANADA.

The Canada Year Book, 1922-23, contained an article under the above heading by P. A. Taverner, of the Department of Mines, Ottawa. See p. 32 of the 1922-23 edition or p. 82 of the 1921 edition.

PART VI.—THE NATURAL RESOURCES OF CANADA.

The economic life of new countries must at first depend entirely, and later mainly, upon their natural resources. Older countries, after exhausting their most

easily obtained resources, turn for a livelihood to manufacturing and similar pursuits, conserving their remaining resources and utilizing those of less developed areas as far as practicable.

Canada is distinctly a new country, and her resources are for the most part in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. A notable feature, expecially in so young a country, has been the effort directed to conservation and, in the cases of those resources which admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, sylviculture, fur-farming or the establishment of fish hatcheries.

In recent years numerous surveys and investigations of the extent and value of the resources have been made. A short summary of important details regarding them follows. Fuller information will be found in the introductions to later chapters —Agriculture, Furs, Fisheries, Forestry, Minerals, Water Powers—of this volume.

Agricultural Lands.—Of the total land area of the nine provinces (1,282,067,200 acres), it is estimated that approximately 352,157,190 acres are potential agricultural lands, including grazing lands associated with farm lands. The estimate is based on the best information available, which, for the more northerly parts, is uncertain; the total is made up by adding to the area now occupied by agriculturists all lands considered to be possible of devotion to similar purposes. The area at present under cultivation is but a fraction of this total, the extent under field crops in 1934 being 56,042,420 acres, while the total area under pasture in the same year was 8,353,400 acres. Statistics of farm lands at the Census of 1931 place the area then occupied at 163,114,034 acres; the area of what may be considered as agricultural land still available for occupation was, therefore, 189,043,156 acres. In Yukon and the Northwest Territories there were 5,197 acres in occupied farms in 1931, while it is officially estimated that there are 9,000,000 acres of potential agricultural land. Thus the total area of occupied farms in the Dominion in 1931 was 163,119,231 acres and that of potential agricultural land 198,043,156 acres, making a grand total of 361,162,387 acres of agricultural land out of the total land area of 2,218,747,200 acres. Details are given by provinces in Table 7.

7.—Area of Occupied and Estimated Potential Agricultural Lands in the Nine Provinces and in all Canada, 1931, with Estimated Land Area, 1935.

Province.	Area Occupied.	Area Available for Occupation.	Total Potential Agricultural Land.[1]	Total Land Area, 1935.

British Columbia	3,541,541	19,061,459	22,603,000[2]	229,938,560[3]
Totals for the Provinces	**163,114,034**[3]	**189,043,156**[3]	**352,157,190**	**1,282,067,200**[3]
Yukon and N.W.T.	5,197	9,000,000	9,005,197	936,680,000
Grand Totals for Canada	**163,119,231**	**198,043,156**	**361,162,387**	**2,218,747,200**

[1]These estimates have been made by the Topographical Survey, Department of the Interior.
[2]Subject to revision. [3]These figures have been revised since the publication of the 1933 Year Book.

Thus, in all the provinces but Prince Edward Island, large areas are still available for settlement, and while the nature of the soil and of the climate may in some cases restrict the variety of crops, in general the grain, root and fodder crops can be profitably grown in all the provinces, while stock raising is carried on successfully both in the more densely settled areas and beyond their frontiers.

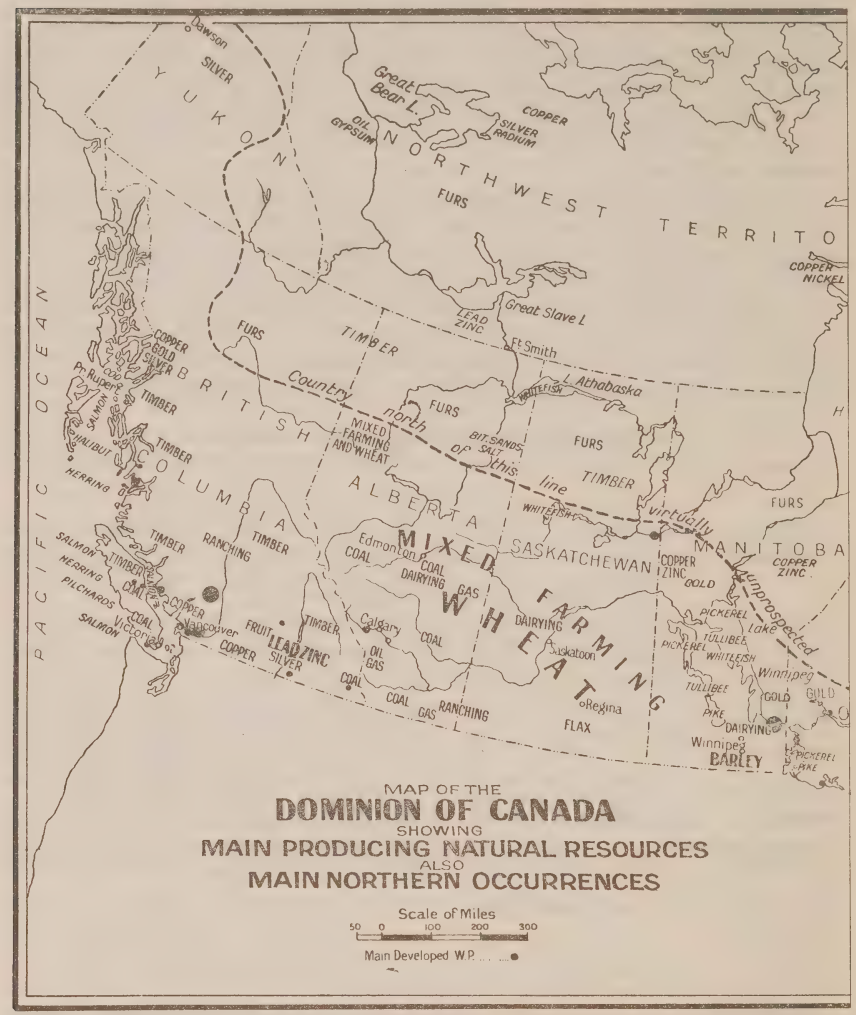
The Maritime Provinces are noted for their fruit and vegetable crops, particularly for the oat and potato crops of Prince Edward Island and New Brunswick, and the apples of the Annapolis valley in Nova Scotia. Quebec and Ontario are pre-eminently mixed-farming communities, various districts specializing in dairying, tobacco, sheep, etc., while the Niagara peninsula in Ontario has long been famous for its fruit crops of both large and small varieties. In Manitoba, Saskatchewan, and Alberta the production of grains, especially wheat, is still of primary importance but is giving way to more diversified types of agriculture, while the stock-raising industry, once so typical of the prairies, is regaining much of its former importance. In British Columbia the fertile valleys are devoted principally to apple and other fruit crops, and numerous districts along the coast and on Vancouver island are given over to general farming and market gardening.

Of the larger areas of land still available for settlement, the clay belt of northern Ontario and Quebec, which is suited to the growing of splendid crops, is to a large extent undeveloped, and even larger areas in northern Saskatchewan and Alberta await cultivation.

Forests.—The forests of Canada rank second only to agriculture in their contribution to the national income. It is estimated that forest products make up about 15 p.c. of all the freight hauled on Canadian railways, and the heavy excess of exports over imports which the wood and paper group provides, amounting to $123,784,411 for the fiscal year ended March, 1934, constitutes an important factor in Canada's balance of international trade.

Canada's forest area may be roughly divided into three main parts: (1) the great coniferous forest of the Pacific slope, (2) the northern forest, principally coniferous, which stretches from the east slopes of the Rockies, north of the prairies and of the Great Lakes to Labrador, and (3) the mixed softwood and hardwood forests extending from lake Superior through southern Ontario and Quebec to the Maritime Provinces.

Canada's forest area is estimated at 1,153,000 square miles, or 32·8 p.c. of the land area. Some of this is agricultural land, but it is considered that about 1,100,000 square miles is essentially forest land which can best be utilized in the production of wood. Not all of this area can be considered as capable of producing timber at the present time, only some 791,670 square miles being regarded as accessible and productive, of which 412,725 is young growth, leaving 378,945 square miles of land carrying timber of merchantable size. With regard to quantity of timber, the accessible stand has been estimated at 165,846 million cubic feet, or 290,230 million feet board measure of saw timber and 920,335,000 cords of pulpwood, cordwood, etc. The stands in Eastern Canada make up 64·3 p.c. of the total, those in British Columbia account for 24·2 p.c., leaving 11·5 p.c. of the accessible timber in the Prairie Provinces. During recent years the annual drain on our forest resources (estimated at 2,812,000,000 cubic feet in 1932) has generally exceeded the new growth. This annual depletion includes enormous losses which have been caused by fire and other destructive agencies. In spite of



the vast extent of the uncut and unburned forests it cannot be said that the measures so far taken by legislation and the application of scientific forestry to preserve them and encourage their reproduction have been sufficient to assure us an adequate supply of timber for the future. Yet an annual increment of 10 cubic feet per acre, which is quite possible under forest management, would provide in perpetuity for the needs of a population of 26 millions at the present annual rate of use.

A classification of Canada's forest area is given in Table 8. The total of forest land is divided into the areas at present carrying timber of merchantable sizes or valuable young growth, and other areas unsuited for present exploitation. It may be pointed out, however, that many of these latter will develop into productive areas as the demand increases and transportation facilities are extended. The totals of forest land given in this table refer to areas which are on the whole better suited to forest production than to any other purpose, although they include about 26,652 square miles of occupied agricultural land at present covered with forest.

8.—Classification of Forest Land in Canada, 1933.

Province or Region.	Productive.								Non-productive.	Total Forested.

Forest products have always formed a large part of the raw material used in all kinds of industrial activity. At the present time products of forest origin form a quarter of our total exports, being exceeded only by the products of the farm.

MAP OF THE
DOMINION OF CANADA
SHOWING
MAIN PRODUCING NATURAL RESOURCES
ALSO
MAIN NORTHERN OCCURRENCES

Because of our climate, coniferous trees form over 80 p.c. of our forest resources and over 95 p.c. of our forest products as at present exploited. Because of their universal use in industry, the softwoods are in greatest demand, not only in Canada but in the markets of the world. Canada enjoys the distinction of holding the Empire's reserve of softwood timber, being rivalled in her coniferous forests only by Asiatic Russia and the United States. The Canadian species of both hardwoods and softwoods yield lumber and timber of dimensions and quality that are equal or superior to those produced by forests elsewhere.

Statistics of forest production (operations in the woods) in 1932 place its total value at $92,106,252, with a corresponding equivalent in standing timber of

1,882,228,308 cubic feet. The most important items are logs for sawing, valued at $18,029,759, and pulpwood for use and export, valued at $36,750,910. The total value of sawmill products in 1932 was $38,506,647 and that of pulp and paper-mill products $135,648,729.

Furs.—Although the rapid advance of settlement has greatly restricted the reservoir of fur-bearing animal life cradled in the vast expanses of northern Canada, yet Canada, after three and a half centuries of exploitation, still holds a foremost place in the ranks of the world's fur-producing countries. Raw furs are at present the only economic return from hundreds of thousands of square miles of the area of the Dominion and are an important product in all the provinces and territories.

The large uninhabited areas of northern Quebec, Ontario and Western Canada furnish subsistence for many of the most highly prized fur-bearing animals, among the most important of which are various varieties of fox, muskrat, mink, beaver and others. The animals are usually caught in traps during the winter months, when the country is more accessible than during the summer and the pelts are in the best condition.

The successful breeding of the fox on fur farms came with the period of rising prices after 1890, and has since developed into an important industry. Prince Edward Island was formerly the centre of the industry, but farms are now found in all provinces of the Dominion. On Dec. 31, 1932, 5,221 fox farms were in operation with a total of 99,109 foxes, principally of the "silver" variety.

Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, coyote, marten and fisher. The mink, in particular, is easily domesticated, and thrives in captivity if care is exercised in the selection of environment and proper attention given to its requirements in the matter of diet. In 1932 the number of farms engaged in the raising of fur-bearing animals other than foxes was 1,075. Mink farms are the most numerous of the miscellaneous class, raccoon farms coming second and muskrat third. Over 395 of the fox farms also raise miscellaneous fur-bearing animals in addition to the foxes.

The total value of the raw fur production of Canada for the season 1932-33 was $10,305,154. This total comprises the value of pelts of fur-bearing animals taken by trappers and of those raised on fur farms. Pelts sold from fur farms in the calendar year 1932 were valued at $3,046,627, and animals sold at $243,193—thus reversing the position of earlier years, when the sales of live animals rather than of pelts, provided the principal source of revenue to the fur farmers.

Fisheries.—The first of Canada's resources to be exploited by Europeans was the fishing banks of the Atlantic coast. It is believed that, for many years before the actual discovery and settlement of North America, the cod banks southeast of Newfoundland and east of Nova Scotia had attracted French fishermen by their abundance of fish. These fishing grounds alone extend along a coast line of more than 5,000 miles, comprising an area of not less than 200,000 square miles, and are in the course of the cold Arctic current, a fact which tends greatly to improve the quality of the fish. The most important fishes of the off-shore fisheries are the cod, halibut, haddock, herring and mackerel, while the inshore and inland fisheries number the lobster, oyster, salmon, gaspereau, smelt, trout and maskinonge among their catches. Other fishing grounds include the inshore expanses of the St. Lawrence river; the Great Lakes, where whitefish and herring form perhaps the most valued catches, and innumerable other inland water areas abounding with trout, pike, bass and other game fish; and the Pacific coast. The fisheries of British Columbia, with its coast line of 7,000 miles, have in recent years shown a rapid development, and the products of the estuarian salmon fisheries of the Fraser, Skeena and other rivers now make up two-fifths of the value of fish products of the Dominion, while in addition large catches of halibut and herring are made off the western coast. The total value of the fisheries in the calendar year 1933 was $27,558,053.

The above statistics give a general survey of the commercial aspects of the fisheries but do not indicate the advantages which Canada has to offer to those who fish for sport. This too has its economic features in a country of such famous

game fish as the salmon of the Restigouche and other rivers of the Maritime Provinces, the black bass of the Quebec and Ontario highlands, the red trout of the Nipigon and the salmon and rainbow trout of British Columbia. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes.

Minerals.—The mineral deposits of Canada are among the Dominion's greatest assets and their economic importance as a factor in the well-being of the nation is demonstrated by the expansion of the mining industry during 1933. The total value of the mineral production of Canada in 1933 was $221,495,253, an increase of 21·2 p.c. over 1932. Exports of the non-ferrous metals (excluding bullion) and their products amounted to $69,340,625 in 1933 compared with $48,130,177 in 1932. This increase, following the greatest industrial depression ever experienced, not only reflects the stability of the industry but suggests also a world-wide recuperation in the mineral-using industries.

Canadian mineral deposits of commercial value are numerous and varied and the exceptionally large area of Precambrian rocks in Canada comprises a favourable field for mining development and exploration. The history of Canadian mining since the reported discovery of iron in Nova Scotia in 1604 by one of Champlain's companions, is replete with romance.

For many years the output of coal from the large reserves in Nova Scotia, the Prairie Provinces and British Columbia held a leading position in Canadian mineral production. The recent pronounced increase in the price of gold, together with the expansion of activities in the older mining camps and the development of new gold-bearing deposits, have resulted, since 1931, in an almost continuous increase in the value of the output of this precious metal, an increase culminating in a production valued in 1933 at $84,350,237 (Canadian funds), constituting the largest item in Canadian mineral production.

From the mines of the Sudbury area, Ontario, which constitute the world's largest reserves of nickel ore, were produced 83,264,658 pounds of nickel in 1933, a gain of 174·5 p.c. over 1932; this distinct increase followed continuous annual declines in Canadian nickel production since 1929. There was also an improvement in lead and zinc production, the output of the former metal showing a 4·1 p.c. increase over 1932, while zinc production was 15·6 p.c. higher. Silver production at 15,187,950 fine ounces represents a recession from 1932, and declines were also recorded in cobalt and arsenic. Copper production in 1933 was up 21·1 p.c. over 1932 and was the largest recorded since the high record quantity in 1930. It is interesting to note that radium and uranium salts were produced commercially in Canada for the first time in 1933, as these elements were extracted from pitchblende-silver ores mined at Great Bear Lake, N.W.T.

In the fuel group increases in quantity over 1932 were registered for coal and petroleum; natural gas, however, was less. Other non-metallics to suffer declines included gypsum and quartz (silica). Shipments of asbestos in 1933 totalled 158,367 tons, an increase of 28·8 p.c. over 1932; the value showed a gain of 71·4 p.c. Production of asbestos, as during recent years, came entirely from Quebec. Increases in quantity in 1933 were also reported for diatomite, feldspar, salt, magnesite, mica, sodium carbonate, sodium sulphate, sulphur and talc.

The value of structural materials, including clay products, cement, lime, sand and gravel and stone, totalled $16,696,687 compared with $22,398,283 in 1932, a falling-off that emphasizes the "lag" in recovery in building and general construction.

Water Powers.—Canada's fresh water area of 228,070 square miles, distributed as it is throughout all parts of the country, provides a large amount of potential electric energy. It is estimated that 20,347,400 h.p. are available at a minimum yearly flow, 33,617,200 at ordinary six-months flow and that a turbine installation of 43,700,000 h.p. is possible. The installation at Jan. 1st, 1935, was 7,547,035 h.p., which represents only about 17·27 p.c. of the possible installation. Perhaps the greatest use to which these resources have yet been put has been in the pulp and paper industry, and to a lesser degree in the mining, the electro-chemical, the electro-metallurgical and the flour-milling industries. The water power utilized in the pulp and paper industry alone amounted on Jan. 1, 1935 to 1,636,000 h.p. not including large amounts of secondary power purchased for use in electric boilers. Over 94 p.c. of the power available is in Quebec, Ontario, Manitoba and British Columbia; Quebec, with 8,459,000 h.p. available at ordinary minimum flow, has the largest resources in the Dominion.

Game and Scenery.—Canada's resources as a country for the sportsman and tourist are both unique and varied. Owing to the growth of tourist travel and its demands, great areas of uninhabited land have become accessible, and hitherto almost unknown parts may now be reached and traversed with ease. The valleys of Nova Scotia and New Brunswick, the broken lake country of northern Ontario and Quebec, northern Manitoba and Saskatchewan, as well as the mountain districts of British Columbia, offer to the tourist, the hunter and the fisherman new scenic effects and innumerable game preserves, and have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers which form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter and angler, at proper seasons, a wealth of game species. The deer and moose of Eastern Canada, the bear and mountain sheep of the Rockies, game animals, birds and fishes in unusual variety, have given the Dominion exceptional advantages for this means of recreation.

National Parks of Canada.—The Dominion Government maintains, as the medium through which some of the most outstanding natural beauties of the country may be preserved and popularized, the National Parks Branch of the Department of the Interior, which administers the scenic and recreational parks set aside for this purpose. Under the supervision of this same body are the national wild animal preserves—large fenced areas for the protection and propagation of species in danger of extinction, the national historic parks, and the historic sites of national interest which have been acquired throughout the country. In the national parks, all wild life is given rigid protection, and primal natural conditions are maintained as far as possible. Access to many outstanding points of interest is provided by fine motor roads or well constructed trails. Several of the provinces, including Alberta, British Columbia, Ontario, Quebec, and Saskatchewan, also maintain provincial parks for similar purposes; among these are the Algonquin park (2,740 square miles) in Ontario and the Laurentides park (3,565 square miles) in Quebec.

A list of the Dominion national parks and reserves is given in Table 9.

9.—Details Regarding Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1935.[1]

(Twenty in number with a total area of 29,363·1 square miles.)

Park.	Location.	Date Established.	Area.	Characteristics.
Scenic Parks.			sq. miles	
Banff	Western Alberta, on east slope of Rockies.	1885	2,585·00	Mountain playground containing two famous resorts, Banff and Lake Louise. Massive ranges, upper slopes bare and worn, or glacier crowned; lower slopes covered with luxuriant forests and flowered alplands; glacier-fed lakes. Wild deer, goat, sheep, elk, etc. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, ski-ing, tobogganing, snow-shoeing, skating, curling.
Yoho	Eastern British Columbia, on west slope of Rockies.	1886	507·00	Rugged scenery on west slope of Rockies; Kicking Horse valley; lofty peaks, large number with permanent ice-caps or glaciers; famous Yoho valley with numerous waterfalls, one over 1,200 feet in height. Natural bridge, Emerald lake, lakes O'Hara and McArthur.
Glacier	Southeastern British Columbia on summit of the Selkirk range.	1886	521·00	Massive formation of the old Selkirk range; luxuriant forests, alpine flower gardens. Centre for alpine climbers. Illecillewaet and Asulkan glaciers and valleys; Nakimu caves. Marion lake, Rogers and Baloo passes.
Mount Revelstoke	Southeastern British Columbia on the summit of Mount Revelstoke.	1914	100·00	Nineteen mile drive up Mt. Revelstoke affording panoramic views of the Columbia and Illecillewaet valleys, Clach-na-Cuddin icefield, lakes Eva and Millar. Game sanctuary and winter sports resort.
Kootenay	Southeastern British Columbia along Banff Windermere highway.	1920	587·00	Park extends five miles on each side of Vermilion-Sinclair section of Banff-Windermere highway. Deep canyons, Iron Gates, Briscoe range, Sinclair canyon, famed Radium Hot Springs. Bear, deer, caribou, and Rocky Mountain sheep.
Jasper	Western Alberta, on east slope of Rockies.	1907	4,200·00	Immense mountain wilderness, rich in historical associations. Numbers of unclimbed peaks; glaciers, snowfields, canyons, lakes of wonderful colouring; Athabaska valley, Maligne lake, Mount Edith Cavell; Miette Hot Springs; big game sanctuary. One of the finest golf courses on the continent.
Waterton Lakes	Southern Alberta, adjoining Glacier park in Montana, U.S.A.	1895	220·00	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails; waterfalls, snow peaks, trout fishing, camping, golf.
St. Lawrence Islands	In St. Lawrence river between Morrisburg and Kingston, Ontario.	1904	185·60 (acres)	Thirteen islands among the "Thousand Islands" in the St. Lawrence river. Recreational area, camping, fishing.
Point Pelee	Southern Ontario on lake Erie.	1918	6·04	Most southerly mainland point in Canada, 40° 54′ N. Resting place of many migratory birds; summer resort and bird reserve; unique flora. Recreational area.
Georgian Bay Islands (including Flowerpot Island Reserve)	In Georgian Bay near Midland, Ontario.	1929	5·37	Thirty islands in Georgian bay, Beausoleil, largest of the group is a popular camping resort. Fine bathing beaches, beautiful groves of trees, varied bird and plant life. Flowerpot island, at head of Bruce peninsula, has interesting limestone formations and numerous caves.

[1]This table is reproduced from the Annual Report of the Commissioner, National Parks Branch, Department of the Interior.

9.—Details Regarding Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1935—concluded.

Park.	Location.	Date Established.	Area.	Characteristics.
Scenic Parks.—Con.			sq. miles	
Riding Mountain.....	Southwestern Manitoba, west of lake Winnipeg.	1929	1,148·04	Rolling woodland country in western Manitoba dotted with several beautiful lakes. Natural home of big game including one of the largest herds of wild elk in Canada. Fine bathing and camping, summer resort; Government golf course.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,869·00	Forest country of northwestern Canada, birch, spruce, jack-pine, poplar; lakes and streams; moose, deer, bear, beaver and interesting bird life. Excellent fishing, northern pike, pickerel and lake trout; fine white sand beaches, ideal camping grounds.
National Parks Tar Sands Reservation.[1]	Alberta.....	1926	2,068·20 (acres)	Four areas comprising in all 2,068 acres in the Fort McMurray District, Alberta, has been reserved for the National Parks Branch to provide a supply of tar sands for road construction purposes in the National Parks.
Animal Parks and Reserves.				
Buffalo.....	Eastern Alberta, near Wainwright..	1908	197·50	Fenced enclosure; home of the Dominion government buffalo herd. Over 5,000 buffalo, also moose, deer, elk, yak and hybrids.
Elk Island.....	Central Alberta, near Lamont.	1911	51·00	Fenced enclosure, containing over 1,600 buffalo, also moose, elk, and deer.
Nemiskam.....	Southern Alberta, near Foremost.	1922	8·50	Fenced antelope reserve, containing more than 300 head of this interesting animal, a species indigenous to the region.
Wawaskesy.....	Southeastern Alberta.	1922	54·00	Antelope reserve, as yet undeveloped.
Wood Buffalo[2].....	Partly in Alberta (13,675 sq. miles) and partly in Northwest Territories (3,625 sq. miles) west of Athabaska and Slave rivers.	1922	17,300·00	Forests interspersed with rivers and open plains. Dotted with innumerable lakes and streams. The home of the wood buffalo, moose, deer, cariboo, bear, beaver—waterfowl abundant. Area as yet undeveloped.
Historic Parks.				
Fort Anne.....	Nova Scotia..... (Annapolis Royal)	1917	31·00 (acres)	National Historic Park—Site of early Acadian settlement of Port Royal; museum containing interesting relics of early days.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	59·00 (acres)	National Historic Park—Site of old French fort erected middle of 17th century. Renamed Fort Cumberland in 1755 by British; original name was later restored.

[1] Reserved by Order in Council and became a Dominion reserve by agreement with the province of Alberta in 1931. [2] Administered by the Lands, Northwest Territories and Yukon Branch of the Department of the Interior.

PART VII.—CLIMATE AND METEOROLOGY.

Section 1.—The Climate of Canada.

An article on this subject by Sir Frederic Stupart, Director of the Dominion Meteorological Service, Toronto, appeared in the 1929 edition of the Year Book at pp. 42-51.

Section 2.—The Factors which Control Canadian Weather.

Under the above heading, Sir Frederick Stupart, Director of the Dominion Meteorological Service, Toronto, contributed an article which appeared at pp. 26-31 of the 1924 edition of the Year Book, also at pp. 36–40 of the 1925 edition.

Section 3.—The Distribution of Precipitation in Canada.

An article on "The Distribution of Precipitation in Canada", contributed by A. J. Connor, Climatologist, Dominion Meteorological Office, Toronto, appeared at pp. 42–46 of the 1926 edition of the Year Book.

Section 4.—The Temperature and Precipitation of Northern Canada.

An article on the climate of northern Canada, accompanied by meteorological tables showing the normal temperature and precipitation at selected northern stations, was contributed by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, to the 1930 edition of the Year Book, where it will be found at pp. 41–56.

Section 5.—The Meteorological Service of Canada.

Under the above heading Sir Frederic Stupart contributed a short article descriptive of the growth and present activities of the Meteorological Service, to the 1922-23 edition of the Year Book (pp. 43–47); to it the interested reader is referred.

Section 6.—Meteorological Tables.

Tables showing the normal temperature and precipitation at selected Canadian stations in each of the provinces, together with the recorded extremes, also the averages of sunshine, wind and weather at such stations, will be found at pp. 51–63 inclusive of the 1927-28 edition of the Year Book. The 1931 edition of the Year Book contains at pp. 48–76 additional and more comprehensive tables, contributed by A. J. Connor, of monthly average temperatures and precipitation throughout Canada, as well as of normal snowfall and duration of bright sunshine.

Section 7.—Droughts in Western Canada.

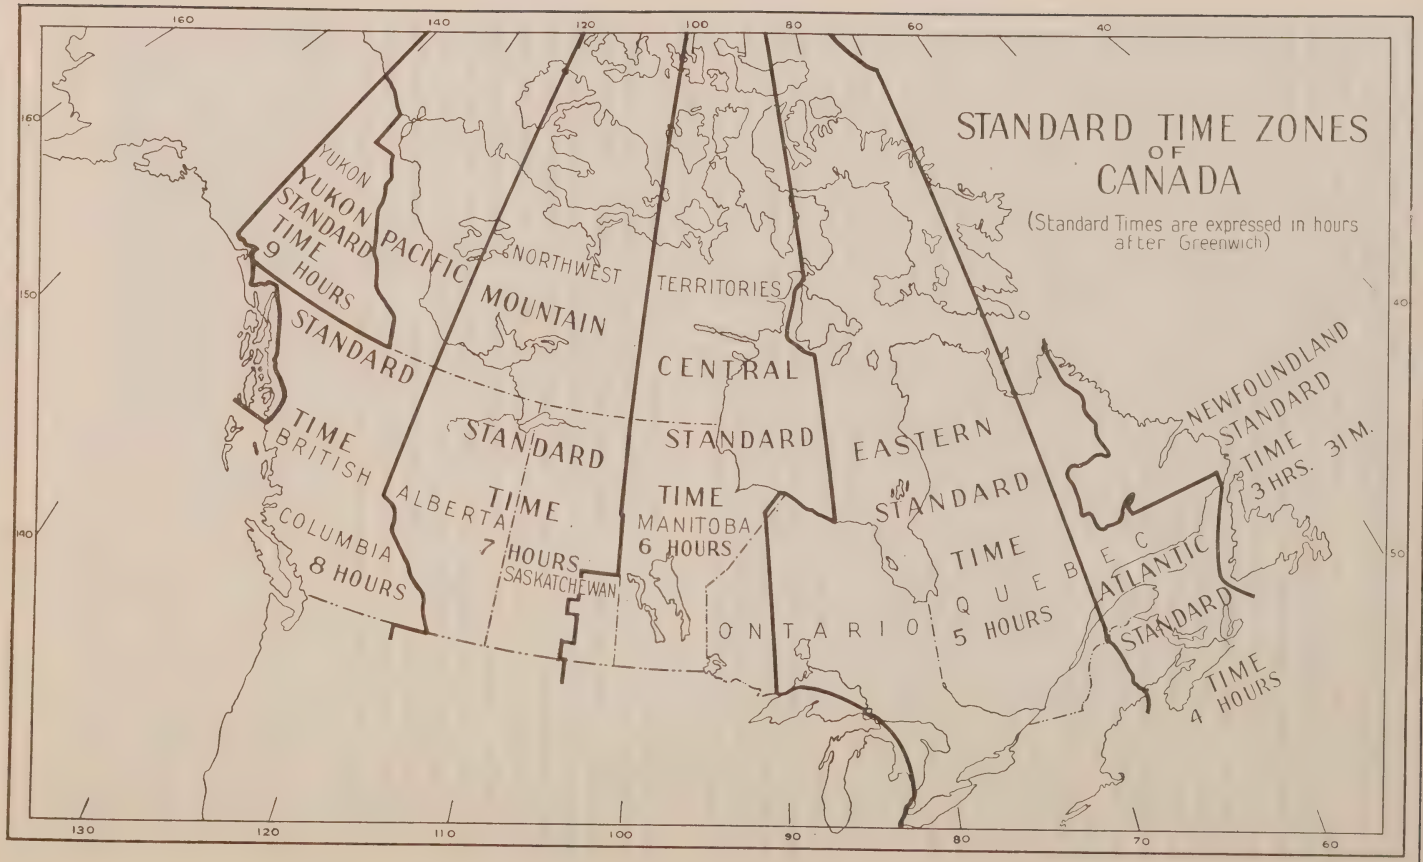
An article on the above subject by A. J. Connor, of the Meteorological Service of the Department of Marine, Ottawa, accompanied by diagrams and tables showing the precipitation and sun-spot incidence in the Prairie Provinces, appeared at pp. 47–59 of the 1933 edition of the Year Book.

Section 8.—Standard Time and Time Zones in Canada.*

In former times, when transportation was slow and people for the most part lived within their own communities, it was natural enough that each community should have its own local time based on sun time. The difference in sun time as between communities is, of course, determined by the difference in their longitude. Inasmuch as the sun appears to travel the 360 degrees around the world in 24 hours or 1,440 minutes, a community which is precisely one degree of longitude west of another community in the same latitude naturally has the sun rise and set four minutes later than it rises and sets in the community which is one degree farther east. Local time, in so far as it was accurately kept, tended therefore to conform to "sun time" and noon came when the sun reached its highest point.

The advent of more rapid transportation, however, made these local times extremely inconvenient for travellers. In particular, railway time tables were found almost impossible to work out on the basis of the local times of each community. Consequently in Great Britain, where the differences of longitude are comparatively small, the problem was solved in 1880 by placing the whole country on the time of Greenwich observatory, while Irish time was standardized at twenty-five minutes behind English time, being the time of Dublin. The American continent, however, extends over such an enormous distance from east to west that it was impracticable to have a single standard of time. Accordingly, in the United States the railways for their own purposes divided the country into four time regions, which were called Eastern, Central, Mountain and Pacific, the time used in these zones being five, six, seven and eight hours, respectively, behind Greenwich time. The change from one time to another was made at divisional points on the several railways and this time, known as railway time, was adopted by most towns in place of their own local time.

From 1878 on, Sir Sandford Fleming had been advocating the general use of what are called standard time zones and this suggestion was adopted at a world conference held at Washington in 1884. Sir Sandford Fleming proposed that the number of times in the world should be reduced to twenty-four, each time zone to extend over one twenty-fourth of the surface of the earth and to include all the territory between two meridians, fifteen degrees of longitude apart, the standard for all times being Greenwich time, and all other time zones being a definite number of hours either in advance of or behind Greenwich. These proposals have been very generally accepted. Mid-European and East European time are to-day respectively one hour and two hours in advance of Greenwich, while on this continent the Atlantic, Eastern, Central, Mountain, Pacific, Yukon and Alaska time zones have times, respectively, four, five, six, seven, eight, nine and ten hours behind Greenwich. The differences are usually expressed in intervals of so many hours' difference from Greenwich. However, some countries and localities of smaller area have times which are not an exact hour's difference from Greenwich, Newfoundland and Labrador, for example, having a time three hours and thirty-one minutes behind Greenwich. This difference of three hours and thirty-one minutes would correspond to west longitude 52° 45′, which is nearly the longitude of St. Johns, Newfoundland.



In Canada, Atlantic standard time, which is the local time at the 60th meridian running near Sydney, Nova Scotia, and is four hours behind Greenwich, is used in the Maritime Provinces and those parts of Quebec and the Northwest Territories

*Based on a paper "Standard Time and Time Zones in Canada", by C. C. Smith, Dominion Observatory, Ottawa.

east of the 68th meridian of west longitude. Eastern standard time, which is the local time at the 75th meridian running near Cornwall, Ontario, and is thus five hours behind Greenwich, is used in Quebec west of the 68th meridian and in Ontario east of the 90th meridian and in the Northwest Territories between the 68th and 85th meridians. Central standard time, which is the local time at the 90th meridian, is six hours behind Greenwich and is used in Ontario west of the 90th meridian, in Manitoba, in the Northwest between the 85th and the 102nd meridians and in the southeasterly part of Saskatchewan. Mountain time, which is the local time at the 105th meridian running near Regina, is seven hours behind Greenwich and is used throughout Saskatchewan except in the southeasterly part, throughout Alberta and in that part of the Northwest Territories between the 102nd and 120th meridians. Pacific standard time, which is the local time of the 120th meridian running near Kamloops, British Columbia, is eight hours behind Greenwich and is used throughout British Columbia and in that part of the Northwest Territories lying west of the 120th meridian. Yukon standard time, which is the local time at the 135th meridian, running near Whitehorse, Yukon, is nine hours behind Greenwich and is used throughout the Yukon Territory. Thus in the far-flung area of the Dominion there are no fewer than six different standard times roughly corresponding with the 84 degrees of longitude between the Labrador boundary and the Alaskan boundary. The existence of the different time zones is to-day brought home to the average man by the radio; especially in such programs as the Empire Christmas broadcasts.

Some municipalities adopt the time used by the local railways, which in some cases differs from the standard, and there are also villages which adopt such time as seems to best suit their convenience, but, in general, the legal boundaries of the different time zones are actually in use. The boundaries of the standard time zones in Canada and Newfoundland are shown in the map on p. 52.

Daylight Saving Time.—For some years before the Great War there had been an active propaganda, particularly in the cities, for the use of an earlier time, usually referred to as "daylight saving time", and one hour ahead of standard time, during the summer months. It was considered that both from the economic and from the health point of view, the people, particularly in industrial towns and cities, would gain by beginning work earlier in the morning and having a longer period of sunlight at their disposal for recreation after the work of the day was over. The opponents of the scheme pointed out that the same results might be achieved if everyone went to work an hour earlier and quit work an hour earlier, but it was replied that this ignored the extent to which man is a creature of habit. In Great Britain the use of daylight saving time during the summer months was legalized in 1916 in order to economize the use of light and power for ammunition-making and other related manufactures, and it has since been maintained there by law. The United States and Canada adopted daylight saving for the entire country in 1918, but the Canadian Act lapsed at the end of that year. Since that date, however, various towns and cities have adopted daylight saving by-laws for varying periods in the summer months. There is, indeed, a good deal of confusion and inconvenience arising out of this situation, since, of two towns a few miles apart, one may adopt daylight saving and the other may not, while in other cases they may both adopt daylight saving but one of them for a shorter term than the other. Generally speaking, in the United States and Canada the agricultural element in the population has been opposed to daylight saving and this has made it impracticable to adopt daylight saving time on a nation-wide basis.

It may be added that the adoption of daylight saving time brings greater benefit to communities situated near the eastern ends of their respective time zones, since in their cases standard time is sometimes slower than sun time, while daylight saving time may be as near to sun time as is standard time. Again, in proportion as places are situated in a more northerly latitude, their days are longer in summer even without daylight saving and this is probably the reason why in the Canadian West, where in the settled areas the summer day is an hour or even two hours longer than in the industrial east, daylight saving is not in vogue. Generally speaking, in Canada daylight saving exists only in the industrial cities and towns between Quebec city and Windsor, Ontario, though Halifax and Saint John in the Maritimes and Regina in Saskatchewan adopted local daylight saving time in the summer of 1930.

Legal Authority for the Time Zones.—All regulations made in Canada concerning standard time, except the Daylight Saving Act of 1918 (which is understood to have lapsed at the end of that year) have been passed by the Provincial Legislatures and the Northwest Territories Council.

The boundaries of the zones are those laid down in the Statutes of the different provinces and the Northwest Territories. They are usually provincial boundaries or meridians. In the more thickly settled portions of the country this leads to some confusion. The Interstate Commerce Commission have charge of the placing of the boundaries of the time zones in the United States and bend the lines around to fit, so far as convenient, the divisional points of the railways and the requirements of the public. Such a national body can deal more effectively with such matters as the time tables of interstate carriers.

The official legislation in Canada in regard to time chiefly affects such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for game, times of opening and closing business houses and places of amusement.

CHAPTER II.—HISTORY AND CHRONOLOGY.

PART I.—HISTORY.

In the 1922-23 edition of the Canada Year Book, pp. 60–80, will be found an outline of the history of Canada, not reprinted here for lack of space.

A select bibliography of historical works relating to Canada was contributed by the late Adam Shortt, C.M.G., LL.D., F.R.S.C., Chairman of the Historical Documents Publication Board, Ottawa, to the 1925 edition of the Canada Year Book, where it appears on pp. 53–55.

PART II.—CHRONOLOGY, 1497 to 1934.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovers Hudson strait.
1501. Gaspar Corte Real visits Newfoundland and Labrador.
1524. Verrazano explores the coast of Nova Scotia.
1534. June 21, Landing of Jacques Cartier at Esquimaux bay.
1535. Cartier's second voyage. He ascends the St. Lawrence to Stadacona (Quebec), (Sept. 14) and Hochelaga (Montreal), (Oct. 2).
1541. Cartier's third voyage. He plants wheat, cabbages, turnips and lettuces near Cap Rouge river.
1542-3. De Roberval and his party winter at cape Rouge, and are rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1604. De Monts settles colony on island in the St. Croix river.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovers lake Champlain.
1610-11. Hudson explores Hudson bay and James bay.
1611. Brûlé ascends the Ottawa river.
1612. Oct. 15, Champlain made Lieutenant-General of New France.
1613. June, Champlain ascends the Ottawa river.

1616. First schools opened at Tadoussac and on the site of the city of Three Rivers.
1617. Arrival at Quebec of the first colonist, Louis Hébert and his family.
1620. Population of Quebec, 60 persons.
1621. Code of laws issued and register of births, deaths and marriages opened in Quebec. Nova Scotia granted to Sir William Alexander by King James I.
1622. Lake Superior discovered by Brûlé.
1623. First British settlement of Nova Scotia.
1627. New France and Acadia granted to the Company of 100 Associates.
1628. Port Royal taken by Sir David Kirke.
1629. April 24, Treaty of Susa between France and England. July 20, Quebec taken by Sir David Kirke.
1632. Mar. 29, Canada and Acadia restored to France by the Treaty of St. Germain-en-Laye.
1633. May 23, Champlain made first Governor of New France.
1634. July 4, Founding of Three Rivers.
1634-35. Exploration of the Great Lakes by Nicolet.
1635. Dec. 25, Death of Champlain at Quebec. Founding of the first college at Quebec.
1638. June 11, First recorded earthquake in Canada.
1640. Discovery of lake Erie by Chaumonot and Brébeuf.
1641. Resident population of New France, 240.
1642. May 17, Founding of Ville-Marie (Montreal) by Maisonneuve.
1646. Exploration of the Saguenay by Dablon.
1647. Lake St. John discovered by de Quen.
1648. Mar. 5, Council of New France created.
1649. Mar. 16-17, Murder of Fathers Brébeuf and Lalemant by Indians and massacre of the Hurons.
1654. August, Acadia taken by an expedition from New England.
1656. Acadia granted by Cromwell to La Tour, Temple and Crowne.
1659. June 16, François de Laval arrives in Canada as Vicar-Apostolic.
1660. May 21, Dollard des Ormeaux and sixteen companions killed by Iroquois at the Long Sault, Ottawa river.
1663. Company of 100 Associates dissolved. Feb. 5, severe earthquake. April, Sovereign Council of New France established. Population of New France, 2,500, of whom 800 were in Quebec. Foundation of the "Grand Seminary" at Quebec, by Laval.
1664. May, Company of the West Indies founded.
1665. Mar. 23, Talon appointed Intendant.

1666. Feb.-Mar., First census. Population of New France, 3,215.
1667. July 21, Acadia restored to France by the Treaty of Breda. Sept.-Oct., Second census; white population of New France, 3,918.
1668. Foundation of the "Little Seminary" at Quebec by Laval. Mission at Sault Ste. Marie founded by Marquette.
1670. May 13, Charter of the Hudson's Bay Company granted.
1671. Population of Acadia, 441.
1672. Population of New France, 6,705. April 6, Comte de Frontenac, Governor.
1673. June 13, Cataraqui (Kingston) founded.
1674. Oct. 1, Laval becomes first Bishop of Quebec.
1675. Population of New France, 7,832.
1678. Niagara falls visited by Hennepin.
1679. Ship *Le Griffon* built on Niagara river above the falls by La Salle. Third census; population of New France, 9,400; of Acadia, 515.
1681. Fourth census; population of New France, 9,677.
1682. Frontenac recalled.
1683. Population of New France, 10,251.
1685. First issue of card money. Fifth census; population of New France, 12,263, including 1,538 settled Indians.
1686. Population of New France, 12,373; of Acadia, 885.
1687. Mar. 18, La Salle assassinated.
1688. Sixth census; population of New France, 11,562, including 1,259 settled Indians.
1689. June 7, Frontenac re-appointed Governor. Aug. 5, Massacre of whites by Indians at Lachine.
1690. May 21, Sir William Phips captures Port Royal, but is repulsed in an attack on Quebec (Oct. 16-21).
1692. Seventh census; population of New France, 12,431. Oct. 22, Defence of Verchères against Indians by Madeleine de Verchères.
1693. Population of Acadia, 1,009.
1695. Eighth census; population of New France, 13,639, including 853 settled Indians.
1697. Sept. 20, By the treaty of Ryswick, places taken during the war were mutually restored. D'Iberville defeats the Hudson's Bay Co.'s ships on Hudson bay.
1698. Nov. 28, Death of Frontenac. Ninth census; population of New France, 15,355.
1701. La Motte Cadillac builds a fort at Detroit.
1703. June 16, Sovereign Council of Canada becomes Superior Council and membership increased from 7 to 12.
1706. Tenth census; population of New France, 16,417.
1708. Death of Laval.
1709. British invasion of Canada.
1710. Oct. 13, Port Royal taken by Nicholson.
1711. Sept. 1, Part of Sir H. Walker's fleet, proceeding against Quebec, wrecked off the Seven Islands.
1713. April 11, Treaty of Utrecht; Hudson bay, Acadia and Newfoundland ceded to Great Britain. August, Louisbourg founded by the French. Population of New France, 18,119.
1718. Foundation of New Orleans in carrying out French plan to control the Mississippi as well as the St. Lawrence.
1719. Census population of New France, 22,530.
1720. Population of New France, 24,234; of Isle St. Jean (P.E.I.), about 100. April 25, Governor and Council of Nova Scotia appointed.
1721. June 19, Burning of about one-half of Montreal. Census population of New France, 24,951.
1727. Population of New France, 30,613.
1728. Population of Isle St. Jean (P.E.I.), 330.
1731. Population of the north of the peninsula of Acadia, 6,000.
1733. Discovery of lake Winnipeg by La Vérendrye.
1734. Road opened from Quebec to Montreal. Census population of New France, 37,716.
1737. Iron smelted on St. Maurice. French population of the north of the Acadia peninsula, 7,598.
1739. Census population of New France, 42,701.
1743. The younger La Vérendrye discovers the Rocky mountains.
1745. June 17, Taking of Louisbourg by Pepperell and Warren.
1748. Oct. 18, Treaty of Aix-la-Chapelle. Louisbourg restored to France in exchange for Madras.
1749. June 21, Founding of Halifax—British immigrants brought to Nova Scotia by Governor Cornwallis, 2,544 persons. Fort Rouillé (Toronto) built.
1750. St. Paul's church, Halifax, (oldest Anglican church in Canada) built.
1752. Mar. 25, Issue of the Halifax *Gazette* first paper in Canada. British and German population of Nova Scotia, 4,203.
1754. Census population of New France, 55,009.
1755. Establishment at Halifax of first post office in what is now Canada, together with direct mail communication with Great Britain. June 16, Surrender of Fort Beauséjour on the isthmus of Chignecto to the British. Sept. 10, Expulsion of the Acadians from Nova Scotia.
1756. Seven Years' War between Great Britain and France begins.
1758. July 26, Final capture of Louisbourg by the British. Oct. 7, First meeting of the Legislature of Nova Scotia.

1759. July 25, Taking of Fort Niagara by the British. July 26, Beginning of the siege of Quebec. July 31, French victory at Beauport Flats. Sept. 13, Defeat of the French on the Plains of Abraham. Death of Wolfe. Sept. 14, Death of Montcalm. Sept. 18, Surrender of Quebec.

1760. April 28, Victory of the French under Lévis at Ste. Foy. Sept. 8, Surrender of Montreal. Military rule set up in Canada.

1762. British population of Nova Scotia, 8,104. First British settlement in New Brunswick.

1763. Feb. 10, Treaty of Paris, by which Canada and its dependencies are ceded to the British. May, Rising of Indians under Pontiac, who take a number of forts and defeat the British at Bloody Run (July 31). Oct. 7, Civil government proclaimed. 1921. Feb. 14 - June 4, Fifth session of thirteenth Parliament of Canada. May 10, Preferential tariff arrangement with British West Indies becomes effective. June 1, Sixth Dominion Census. June 20-Aug. 5, Imperial Conference. Sept. 5-Oct. 5, Second meeting of Assembly of League of Nations at Geneva. Nov. 11, Opening of conference on limitation of armament at Washington. Dec. 6, Dominion general election. Dec. 29, New Ministry (Liberal), with Right Hon. W. L. Mackenzie King as Prime Minister, is sworn in.

1922. Feb. 1, Arms Conference at Washington approves 5-power treaty, limiting capital fighting ships and disapproving unrestricted submarine warfare and use of poison gas. Mar. 8-June 28, First session of fourteenth Parliament of Canada. April 10, General Economic Conference opened at Genoa. July 13, Conference between Canada and the United States *re* perpetuating the Rush-Bagot treaty regarding armament on the Great Lakes. Aug. 7, Allies' Conference on war debts and reparations opened at London. Sept. 4, Third Assembly

of League of Nations opened at Geneva. Oct. 10, Mudania Armistice signed by Britain, France and Turkey. Oct. 14, Fourth International Labour Conference at Geneva. Nov. 20, Turkish Peace Conference opened at Lausanne. Dec. 9, Reparations Conference opened at London. Dec. 15, Signing of trade agreement between Canada and France.

1923. Jan. 4, Signing of trade agreement between Canada and Italy. Jan. 31-June 30, Second session of fourteenth Parliament of Canada. April 1, Removal of British embargo on Canadian cattle effective. Sept. 3, Fourth session of League of Nations at Geneva. Oct. 1, Imperial Conference and Economic Conference at London.

1924. Feb. 28-July 19. Third session of the fourteenth Parliament of Canada. April 23, British Empire Exhibition opened by King George at Wembley, England, with the Prince of Wales as President. July 3, Trade agreement between Canada and Belgium signed at Ottawa. Aug. 6-16, Meeting of the British Association for the Advancement of Science at Toronto. Aug. 11-16, Meeting of International Mathematical Congress at Toronto. Sept. 1, Opening of fifth session of League of Nations at Geneva, Switzerland.

1925. Feb. 5-June 27, Fourth session of fourteenth Parliament of Canada. June 2, Provincial general election in Saskatchewan. Liberal party under Hon. C. A. Dunning returned to office. June 10, Inauguration of the United Church of Canada. June 25, Provincial general election in Nova Scotia; Conservative party under Hon. E. N. Rhodes returned to office. July 6, Signing at Ottawa of trade agreement between Canada and the British West Indies. Aug. 10, Provincial general election in New Brunswick; Conservative party under Hon. J. B. M. Baxter returned to office. Sept. 5, Fourteenth Parliament dissolved. Oct. 29, Dominion general elections. Nov. 20, Death of Queen Alexandra.

1926. Jan. 7-July 1, First session of fifteenth Parliament of Canada. April 15, Budget speech; reductions of income and other taxes announced. June 28, Resignation of Rt. Hon. W. L. Mackenzie King, Prime Minister, and his Cabinet. Provincial general elections in Alberta; United Farmers under Premier Brownlee retain office. June 29, Rt. Hon. Arthur Meighen becomes Prime Minister. July 1, Two-cent domestic rate of postage restored. July 2, Fifteenth Parliament dissolved. July 13, Composition of Mr. Meighen's Cabinet announced (see p. 77 of the 1927-28 Year Book). Sept. 14, Dominion general elections. Sept. 25, Rt. Hon. W. L. Mackenzie King becomes Prime Minister (for composition of Cabinet see p. 69 of the 1930 Year Book). Oct. 19-Nov. 23, Imperial Conference in London. Nov. 26, Hon. C. Vincent Massey is appointed Envoy Extraordinary and Minister Plenipotentiary to the United States. Dec. 1, General election in Ontario; Ferguson Government retains office. Dec. 9, Opening of first session of sixteenth Parliament.

1927. Feb. 8-April 14, Continuation of first session of the sixteenth Parliament of Canada. Feb. 17, Budget speech; reductions of income tax, sales tax and stamp tax on cheques announced. May 16, General elections in Quebec; the Liberal Government of Hon. L. A. Taschereau sustained. June 1, Hon. Wm. Phillips, first U.S. Minister to Canada, reaches Ottawa. June 25, General election in Prince Edward Island; the Conservative Government of Hon. J.D. Stewart defeated. June 28, General election in Manitoba; the Government of Hon. John Bracken sustained. July 1-3, Diamond Jubilee of Confederation celebrated throughout the Dominion. July 30, The Prince of Wales, Prince George, the Rt. Hon. Stanley Baldwin and party, arrive at Quebec on a visit to Canada. September, Canada elected as a non-permanent member of the Council of the League of Nations at Geneva. November, Dominion-Provincial Conference on the relations between the Dominion and the provinces.

1928. Jan. 26-June 11, Second session of the sixteenth Parliament of Canada. Jan. 30, President Cosgrave of the Irish Free State visits Ottawa. Feb. 16, Budget speech announces reduction in taxation. April 25, Sir Wm. H. Clark appointed first British High Commissioner to Canada. May 31, Legislative Council of Nova Scotia ceases to exist, leaving Quebec as the only province with a bi-cameral Legislature. July 18, General elections in British Columbia; Conservatives successful. Aug. 24-Oct. 5, Empire Parliamentary Association visits Canada. Oct. 1, General elections in Nova Scotia; Conservatives retain power.

1929. Feb. 7-June 14, Third session of the sixteenth Parliament of Canada. Mar. 29, Death of Sir Lomer Gouin. June 5, General election in Saskatchewan. Sept. 9, Dr. J. T. M. Anderson becomes Premier of Saskatchewan. Oct. 15-25, The Rt. Hon. J. Ramsay MacDonald, Prime Minister of Great Britain, visits Canada. Oct. 30, General

elections in Ontario; Conservatives retain power. Nov. 11, Death of Hon. Jas. A. Robb, Minister of Finance. Dec. 14, Transfer of natural resources to Manitoba and Alberta.

1930. Jan. 21, Five power naval arms conference opens at London; Canada represented by Hon. J. L. Ralston. Feb. 3, Death of Hon. P. C. Larkin. Feb. 20, Fourth session of the sixteenth Parliament of Canada commences. Transfer of natural resources to British Columbia. Mar. 20, Transfer of natural resources to Saskatchewan. May 30, Dissolution of sixteenth Parliament of Canada. June 19, General elections in Alberta; United Farmers retain power. June 20, General election in New Brunswick; Conservatives retain power. July 28, Dominion general election. Liberal Govenment of Rt. Hon. W. L. Mackenzie King defeated. Aug. 1, H.M. Airship R-100 arrives at Montreal, being the first transatlantic lighter-than-air craft to reach Canada. Aug. 7, Conservative Government of Hon. R. B. Bennett takes office as the fifteenth Ministry since Confederation (for the names of the Ministers see p. 67). Sept. 8-22, First (special) session of the seventeenth Parliament of Canada. Oct. 1, Imperial Conference in London. Dec. 20, Viscount Willingdon, Governor General of Canada, is appointed Viceroy of India by the King.

1931. Feb. 9, The Earl of Bessborough is appointed Governor General of Canada. Mar. 12-Aug. 3, Second session of the seventeenth Parliament of Canada. June 1, Seventh Dominion Census. June 11, Remembrance Day (Nov. 11) proclaimed a general holiday by Act of Parliament. June 22, The U.S. Government grants a one-year moratorium on war debts owing by foreign governments on condition that similar treatment is accorded to Germany in regard to reparation payments. June 30, The Statute of Westminster exempting the Dominion and the provinces from the operation of the Colonial Laws Validity Act and the Merchant Shipping Act is approved by the House of Commons. Aug. 6, Provincial election in Prince Edward Island results in defeat of the Liberal Administration of Hon. D. M. Lea by the Conservatives under Hon. J. D. Stewart. Aug. 24, Hon. L. A. Taschereau's Liberal Administration is sustained in a general election in Quebec. Sept. 21, Great Britain suspends specie payments, following which Canada restricts the export of gold. Nov. 21, Abnormal Importations Act, extending preference to Empire products, assented to in the United Kingdom. Dec. 1, Ottawa Branch of the Royal Mint transferred to the Dominion. Dec. 12, Statute of Westminster establishing complete legislative equality of the Parliament of Canada with that of the United Kingdom becomes effective.

1932. Feb. 4-May 26, Third session of the seventeenth Parliament of Canada. June 16, General election in Manitoba; the Bracken Government retains power. July 18, Treaty between Canada and the United States, providing for the construction of the St. Lawrence Seaway, signed at Washington. July 21-Aug. 20, Imperial Economic Conference at Ottawa. Aug. 6, Official opening of the Welland Ship Canal. Oct. 6-Nov. 25, Beginning of fourth session of the seventeenth Parliament of Canada.

1933. Jan. 17-19, Dominion-Provincial Conference. Jan. 30-May 27, Continuation of fourth session of the seventeenth Parliament. May 18, Celebration of the 150th anniversary of the landing of the Loyalists at Saint John. July 13, Visit of Italian hydroplanes *en route* to Chicago Exhibition. Aug. 22, Provincial general election in Nova Scotia; Liberals under A. L. Macdonald returned. Nov. 2, Provincial general election in British Columbia; Liberals under T. D. Pattullo returned.

1934. Jan. 1, Resumption of granting of titles in Canada. Jan. 25-July 3, Fifth session of the seventeenth Parliament of Canada. Mar. 6, Centenary of city of Toronto celebrated. June 19, General elections in Ontario and Saskatchewan; Liberals under M. F. Hepburn in Ontario and J. G. Gardiner in Saskatchewan returned. July 15th, Three Rivers begins Tercentenary celebrations. August, Celebration at Gaspé of the four-hundredth anniversary of the first landing of Jacques Cartier in Canada.

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

The Dominion of Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Irish Free State (Saorstat Eireann), the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand, the island colony of Newfoundland (with the Labrador coast),* and the colony of Southern Rhodesia. These Dominions enjoy responsible government of the British type, administered by Executive Councils (or Cabinets), acting as advisers to the representatives of the Sovereign, the Executive Councils being themselves responsible to, and possessing the confidence of, the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist. The Imperial Conference of 1926 defined the group of self-governing communities consisting of Great Britain and the Dominions as "autonomous Communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". The Conference further laid down that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". The Conference also recognized certain treaty-making rights as appertaining to the Dominion. At the Imperial Conference of 1930 the constitutional status of the Dominions was further strengthened by the decisions to repeal the Colonial Laws Validity Act and to establish a voluntary Empire judicial tribunal. It was also definitely laid down that the King appoints his Governors General through the Dominion Governments. An Address of the Parliament of Canada to His Majesty was adopted by the House of Commons on June 30, and by the Senate on July 6, 1931, praying for the enactment by the Parliament of the United Kingdom of the Statute of Westminster removing the remaining legal limitations under the Colonial Laws Validity Act of 1895, the Merchant Shipping Act of 1894 and the Colonial Courts of Admiralty Act of 1890 on the legislative autonomy of the Dominions. In compliance with this Address and similar Addresses from the Parliaments of other Dominions, the Parliament of the United Kingdom having enacted legislation to this effect, the Royal Assent was given thereto on Dec. 12, 1931.

Of the Dominions, Canada, Australia and South Africa extend over enormous areas of territory, each of the first two approximating in area to Europe, and including great provinces or states larger than most of its Great Powers. Each province or state has its own problems and its own point of view, so that local Parliaments for each section, as well as the central Parliament for the whole country, are required. These local Parliaments, established when transportation and communication were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case

* As the result of the depression and the consequent financial embarrassments, the Constitution of Newfoundland, on the initiative of the Newfoundland Legislature, was temporarily suspended by the Newfoundland Act passed by the British Parliament on Dec. 21, 1933.

of Australia, or surrendered all their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six, and South Africa four.

Besides the Dominions above enumerated, the great Empire of India has been accepted internationally as a member of the League of Nations, and in its internal administration has been placed on the road, formerly traversed by the Dominions which are now fully self-governing, towards responsible government. India proved her loyalty to the Empire in the Great War and, as the result of the work of Royal Commissions and conferences, a constitution for India along Dominion lines is now (January, 1935), nearing its final stages of preparation before presentation to the British House of Commons.* Although the steps so far taken do not meet the demands of the more radical elements, the result will probably mark as great an advance as the country is now prepared to make. The whole evolution of the Empire, throughout all its parts which are more than mere fortresses like Gibraltar or trading stations like Hong Kong, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It is the recognized aim of British administrators, by the extension of educational facilities and by just administration to develop these capacities to the utmost, so that in the dependencies, as well as in the Dominions and in the Mother Country, the constitutional history of the future may be a record of "freedom slowly broadening down from precedent to precedent".

PART I.—CONSTITUTION AND GENERAL GOVERNMENT.

Under the above heading a brief historical and descriptive account of the evolution of the general government of Canada was given on pp. 89–100 of the Canada Year Book, 1922-23.

PART II.—PROVINCIAL AND LOCAL GOVERNMENT.

Under the heading "Provincial and Local Government in Canada", a brief account of the government of each of the provinces of Canada and of its municipal institutions and judicial organization was published on pp. 101–115 of the 1922-23 edition of the Year Book.

PART III.—LEGISLATIVE AND EXECUTIVE AUTHORITIES.

Section 1.—Dominion Parliament and Ministry.

The Dominion Parliament is composed of the King, represented by the Governor General, the Senate and the House of Commons. The Governor General is appointed by the King on the advice of the Government of Canada. Members of the Senate are appointed for life by the Governor General in Council and members of the House of Commons are elected by the people. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the Mother Country, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

* Sir Samuel Hoare, Secretary of State for India, moved the Second Reading of the India Constitution Bill in the British House of Commons on Feb. 6, 1935. In instructions later issued to the Governor General the British Government renewed the pledge, given in 1919, that the ultimate goal was Dominion status for India.

Subsection 1.—The Governor General of Canada.

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum and forming a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues, and dissolves Parliament and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in Great Britain has been instituted.

A list of the Governors General from the time of Confederation, with the dates of their appointment and assumption of office, is given in Table **1.**

1.—Governors General of Canada, 1867-1935.

Name.	Date of Appointment.	Date of Assumption of Office.
Viscount Monck, G.C.M.G.	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
Field Marshal H.R.H. the Duke of Connaught, K.G.	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.	Aug. 19, 1916	Nov. 11, 1916
General the Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Ratton, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.	Feb. 9, 1931	April 4, 1931

Subsection 2.—The Ministry.

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each of them generally assumes charge of one of the various Departments of the Government, although one Minister may hold two portfolios at the same time, while other Ministers may be without portfolio.

The Prime Ministers since Confederation and the dates of their tenures of office, together with the members of the Fifteenth Ministry, are given in Table **2.** The complete list of the members of the King's Privy Council for Canada, as at Mar. 1, 1935, is added as Table **3.**

2.—Ministries since Confederation and Members of the Fifteenth Ministry.

NOTE.—A complete list of the members of Dominion Ministries from Confederation to 1913 appeared in the Year Book of 1912, pp. 422–429. A list of the members of Dominion Ministries from 1911 to 1921 appeared in the Year Book of 1920, pp. 651–653. A list of the members of the Twelfth and Thirteenth Ministries appeared on pp. 76–77 of the 1927-28 Year Book. Members of the Fourteenth Ministry are listed at p. 65 of the 1929 Year Book and p. 69 of the 1930 Year Book.

1. Rt. Hon. Sir John A. Macdonald, Prime Minister. From July 1, 1867, to Nov. 6, 1873.
2. Hon. Alexander Mackenzie, Prime Minister. From Nov. 7, 1873, to Oct. 16, 1878.
3. Rt. Hon. Sir John A. Macdonald, Prime Minister. From Oct. 17, 1878, to June 6, 1891.
4. Hon. Sir John J. C. Abbott, Prime Minister. From June 16, 1891, to Dec. 5, 1892.
5. Hon. Sir John S. D. Thompson, Prime Minister. From Dec. 5, 1892, to December 12, 1894.
6. Hon. Sir Mackenzie Bowell, Prime Minister. From Dec. 21, 1894, to April 27, 1896.
7. Hon. Sir Charles Tupper, Prime Minister. From May 1, 1896, to July 8, 1896.
8. Rt. Hon. Sir Wilfrid Laurier, Prime Minister. From July 11, 1896, to Oct. 6, 1911.
9. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Conservative Administration.) From Oct. 10, 1911, to Oct. 12, 1917.
10. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Unionist Administration.) From Oct. 12, 1917, to July 10, 1920.
11. Rt. Hon. Arthur Meighen, Prime Minister. (Unionist—"National Liberal and Conservative Party".) From July 10, 1920, to Dec. 29, 1921.
12. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Dec. 29, 1921, to June 28, 1926.
13. Rt. Hon. Arthur Meighen, Prime Minister. From June 29, 1926, to Sept. 25, 1926.
14. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Sept. 25, 1926, to Aug. 6, 1930.
15. Rt. Hon. R. B. Bennett, Prime Minister. From Aug. 7, 1930.

FIFTEENTH DOMINION MINISTRY.

(According to precedence of the Ministers as at the formation of the Cabinet.)

Office.	Occupant.	Date of Appointment.
Prime Minister, President of the Privy Council, Secretary of State for External Affairs	Right Hon. R. B. Bennett, K.C.	Aug. 7, 1930
Minister of Finance	Right Hon. R. B. Bennett, K.C.	Aug. 7, 1930
	Hon. E. N. Rhodes, K.C.	Feb. 3, 1932
Minister without portfolio	Rt. Hon. Sir Geo. H. Perley, G.C.M.G.	Aug. 7, 1930
Minister without portfolio	Right Hon. Arthur Meighen (Senator)	Feb. 3, 1932

Minister of Interior and Superintendent-General of Indian Affairs	Hon. Thomas G. Murphy	Aug. 7, 1930
Solicitor-General	Hon. Maurice Dupré, K.C.	Aug. 7, 1930
Acting Minister of Immigration and Colonization and Minister of Mines	Hon. W. A. Gordon, K.C.	Aug. 7, 1930
Minister of Agriculture	Major the Hon. Robert Weir	Aug. 7, 1930

3.—Members of the King's Privy Council for the Dominion of Canada, According to Seniority Therein,[1] as at Mar. 1, 1935.

NOTE.—In this list the prefix Rt. Hon. indicates membership in the British Privy Council. Besides those mentioned in this list, the Rt. Hon. Sir Lyman P. Duff, K.C.M.G., Chief Justice of the Supreme Court, is a Canadian member of the British Privy Council.

Name.	Date when Sworn In.	Name.	Date when Sworn In.
The Rt. Hon. Sir William Mulock	July 13, 1896	The Hon. James H. King	Feb. 3, 1922
The Rt. Hon. Sir Charles Fitzpatrick[5]	Feb. 11, 1902	The Hon. Edward Mortimer Macdonald	April 12, 1923
The Hon. Sir A. B. Aylesworth	Oct. 16, 1905	The Hon. Edward James McMurray	Nov. 14, 1923
The Hon. Rodolphe Lemieux	June 4, 1906	The Hon. Pierre Joseph Arthur Cardin	Jan. 30, 1924
The Rt. Hon. George P Graham	Aug. 30, 1907	The Hon. George Newcombe Gordon	Sept. 7, 1925
The Hon Chas. Murphy	Oct. 5, 1908	The Hon. Herbert Marler[6]	Sept. 9, 1925
The Hon. R. Dandurand	Jan. 20, 1909	The Hon. Charles Vincent Massey	Sept. 16, 1925
The Rt. Hon. W. L. Mackenzie King[4]	June 2, 1909	The Hon. Walter Edward Foster	Sept. 26, 1925
The Hon. Henri S. Béland	Aug. 19, 1911	The Hon. Philippe Roy[6]	Feb. 9, 1926
The Rt. Hon. Sir Robert Laird Borden	Oct. 10, 1911	The Hon. Charles A. Dunning	Mar. 1, 1926
The Rt. Hon. Sir George Halsey Perley[2]	Oct. 10, 1911	The Hon. John C. Elliott	Mar. 8, 1926
The Hon. Robert Rogers	Oct. 10, 1911	The Hon. James D. Chaplin	July 13, 1926
The Rt. Hon. Sir Thomas White	Oct. 10, 1911	The Hon. George Burpee Jones	July 13, 1926
The Hon. Sir John Douglas Hazen	Oct. 10, 1911	The Hon Donald Sutherland	July 13, 1926
The Hon. William James Roche	Oct. 10, 1911	The Hon. Raymond Ducharme Morand	July 13, 1926
The Hon. Wilfrid Bruno Nantel	Oct. 10, 1911	The Hon. John Alexander Macdonald[2]	July 13, 1926
The Hon. Martin Burrell	Oct. 16, 1911	The Hon. John Leo Chabot	July 19, 1926
The Hon. Charles Marcil	Feb. 15, 1912	The Hon. Eugène Paquet	Aug. 23, 1926
The Hon. Pierre Edouard Blondin	Oct. 20, 1914	The Hon. Guillaume André Fauteux	Aug. 23, 1926
The Rt. Hon. Arthur Meighen[2]	Oct. 2, 1915	The Hon. Lucien Cannon	Sept. 25, 1926
The Hon. Esioff Léon Patenaude	Oct. 6, 1915	The Hon. Peter John Veniot	Sept. 25, 1926
The Rt. Hon. William Morris Hughes	Feb. 18, 1916	The Hon. William D. Euler	Sept. 25, 1926
The Hon. Albert Sévigny	Jan. 8, 1917	The Hon. Fernand Rinfret	Sept. 25, 1926
The Hon. Charles Colquhoun Ballantyne	Oct. 3, 1917	The Hon. James Malcolm	Sept. 25, 1926
The Hon. James Alexander Calder	Oct. 12, 1917	The Hon. Peter Heenan	Sept. 25, 1926
The Hon. Newton Wesley Rowell	Oct. 12, 1917	The Hon. James Layton Ralston	Oct. 8, 1926
The Hon. Sydney Chilton Mewburn	Oct. 12, 1917	H.R.H. Edward Albert Christian George Andrew Patrick David, Prince of Wales	Aug. 2, 1927
The Hon. Thomas Alexander Crerar	Oct. 12, 1917	The Rt. Hon. Stanley Baldwin	Aug. 2, 1927
The Hon. Alexander K. Maclean	Oct. 23, 1917	The Hon. Thomas Ahearn	Jan. 16, 1928
The Hon. Hugh Guthrie[2]	July 5, 1919	The Rt. Hon. James Ramsay MacDonald	Oct. 18, 1929
The Hon. Sir Henry Lumley Drayton	Aug. 2, 1919	The Hon. William Frederick Kay	June 17, 1930
The Hon. Simon Fraser Tolmie	Aug. 12, 1919	The Hon. Cyrus Macmillan	June 17, 1930
The Hon. Fleming Blanchard McCurdy	July 13, 1920	The Hon. Ian Alistair Mackenzie	June 27, 1930
The Hon. Rupert W. Wigmore	July 13, 1920	The Hon. Arthur C. Hardy	July 31, 1930
The Hon. Edgar N. Rhodes[2]	Feb. 22, 1921	The Hon Arthur Sauvé[2]	Aug. 7, 1930
The Hon. John Babington Macaulay Baxter	Sept. 21, 1921	The Hon. Murray MacLaren[2]	Aug. 7, 1930
The Hon. Henry Herbert Stevens[2]	Sept. 21, 1921	The Hon. Hugh Alexander Stewart[2]	Aug. 7, 1930
The Hon. Robert James Manion[2]	Sept. 22, 1921	The Hon. Charles Hazlitt Cahan[2]	Aug. 7, 1930
The Hon. James Robert Wilson	Sept. 26, 1921	The Hon. Donald Matheson Sutherland[2]	Aug. 7, 1930
The Rt. Hon. Richard Bedford Bennett[3]	Oct. 4, 1921	The Hon. Alfred Duranleau[2]	Aug. 7, 1930
The Hon. Ernest Lapointe	Dec. 29, 1921	The Hon. Thomas Gerow Murphy[2]	Aug. 7, 1930
The Hon. Arthur Bliss Copp	Dec. 29, 1921	The Hon. Maurice Dupré[2]	Aug. 7, 1930
The Hon. Charles Stewart	Dec. 29, 1921	The Hon. Wesley Ashton Gordon[2]	Aug. 7, 1930
The Hon. William Richard Motherwell	Dec. 29, 1921	The Hon. Robert Weir[2]	Aug. 8, 1930
The Hon. James Murdock	Dec. 29, 1921	The Hon. G. Howard Ferguson[6]	Jan. 14, 1931
The Hon. John Ewan Sinclair	Dec. 30, 1921	The Hon. W. D. Herridge[6]	June 17, 1931
		The Hon. Robert Charles Matthews[2]	Dec. 6, 1933
		The Hon. Richard Burpee Hanson[2]	Nov. 17, 1934
		The Hon. Grote Stirling[2]	Nov. 17, 1934

[1] As in the case of Privy Councillors of the United Kingdom, members of His Majesty's Privy Council for Canada take rank *inter se* according to the dates of their being sworn in. [2] Ranks as a member of the Cabinet. [3] Ranks as the Prime Minister of Canada. [4] Ranks as the Leader of the Opposition. [5] Ranks as Retired Chief Justice of Canada. [6] Canadian Ministers abroad.

In Table 4 are given the dates of the opening and prorogation of the sessions of the various Dominion Parliaments from 1867 to 1935.

4.—Duration and Sessions of Dominion Parliaments, 1867-1935.

Order of Parliament.	Session.	Date of Opening.	Date of Prorogation.	Days of Session.	Date of Election, Writs Returnable, Dissolution and Length of Parliament.[7]
1st Parliament	1st	Nov. 1, 1867	May 22, 1868	118[1]	
	2nd	April 15, 1869	June 22, 1869	69	Aug., Sept., 1867.[3]
	3rd	Feb. 15, 1870	May 12, 1870	87	Sept. 24, 1867.[4]
	4th	Feb. 15, 1871	April 14, 1871	59	July 8, 1872.[5]
	5th	April 11, 1872	June 14, 1872	65	4 y., 9 m., 15 d.[6]
2nd Parliament	1st	Mar 5, 1873	Aug. 13, 1873	81[2]	July, Aug., Sept., 1872.[3]
	2nd	Oct. 23, 1873	Nov. 7, 1873	16	Sept. 3, 1872.[4]
					Jan. 2, 1874.[5]
					1 y., 4m., 0 d.[6]
3rd Parliament	1st	Mar. 26, 1874	May 26, 1874	62	Jan. 22, 1874.[3]
	2nd	Feb. 4, 1875	April 8, 1875	64	Feb. 21, 1874.[4]
	3rd	Feb. 10, 1876	April 12, 1876	63	Aug. 17, 1878.[5]
	4th	Feb. 8, 1877	April 28, 1877	80	4 y., 5 m., 25 d.[6]
	5th	Feb. 7, 1878	May 10, 1878	93	
4th Parliament	1st	Feb. 13, 1879	May 15, 1879	92	Sept. 17, 1878.[3]
	2nd	Feb. 12, 1880	May 7, 1880	86	Nov. 21, 1878.[4]
	3rd	Dec. 9, 1880	Mar. 21, 1881	103	May 18, 1882.[5]
	4th	Feb. 9, 1882	May 17, 1882	98	3 y., 5 m., 28 d.[6]
5th Parliament	1st	Feb. 8, 1883	May 25, 1883	107	June 20, 1882.[3]
	2nd	Jan. 17, 1884	April 19, 1884	94	Aug. 7, 1882.[4]
	3rd	Jan. 29, 1885	July 20, 1885	173	Jan. 15, 1887.[5]
	4th	Feb. 25, 1886	June 2, 1886	98	4 y., 5 m., 10 d.[6]
6th Parliament	1st	April 13, 1887	June 23, 1887	72	Feb. 22, 1887.[3]
	2nd	Feb. 23, 1888	May 22, 1888	90	April 7, 1887.[4]
	3rd	Jan. 31, 1889	May 2, 1889	92	Feb. 3, 1891.[5]
	4th	Jan. 16, 1890	May 16, 1890	121	3 y., 9 m., 27 d.[6]
7th Parliament	1st	April 29, 1891	Sept. 30, 1891	155	
	2nd	Feb. 25, 1892	July 9, 1892	136	Mar. 5, 1891.[3]
	3rd	Jan. 26, 1893	April 1, 1893	66	April 25, 1891.[4]
	4th	Mar. 15, 1894	July 23, 1894	131	April 24, 1896.[5]
	5th	April 18, 1895	July 22, 1895	96	5 y., 0 m., 0 d.[6]
	6th	Jan. 2, 1896	April 23, 1896	111	
8th Parliament	1st	Aug. 19, 1896	Oct. 5, 1896	48	
	2nd	Mar. 25, 1897	June 29, 1897	97	June 23, 1896.[3]
	3rd	Feb. 3, 1898	June 13, 1898	131	July 13, 1896.[4]
	4th	Mar. 16, 1899	Aug. 11, 1899	149	Oct. 9, 1900.[5]
	5th	Feb. 1, 1900	July 18, 1900	168	4 y., 2 m., 26 d.[6]
9th Parliament	1st	Feb. 6, 1901	May 23, 1901	107	Nov. 7, 1900.[3]
	2nd	Feb. 13, 1902	May 15, 1902	90	Dec. 5, 1900.[4]
	3rd	Mar. 12, 1903	Oct. 24, 1903	227	Sept. 29, 1904.[5]
	4th	Mar. 10, 1904	Aug. 10, 1904	154	3 y., 9 m., 26 d.[6]
10th Parliament	1st	Jan. 11, 1905	July 20, 1905	191	Nov. 3, 1904.[3]
	2nd	Mar. 8, 1906	July 13, 1906	128	Dec. 15, 1904.[4]
	3rd	Nov. 22, 1906	April 27, 1907	157	Sept. 17, 1908.[5]
	4th	Nov. 28, 1907	July 20, 1908	236	3 y., 9 m., 4 d.[6]
11th Parliament	1st	Jan. 20, 1909	May 19, 1909	120	Oct. 26, 1908.[3]
	2nd	Nov. 11, 1909	May 4, 1910	175	Dec. 3, 1908.[4]
	3rd	Nov. 17, 1910	July 29, 1911	196[8]	July 29, 1911.[5]
	1st	Nov. 15, 1911	April 1, 1912	139	2 y., 7 m., 28 d.[6]
	2nd	Nov. 21, 1912	June 6, 1913	173[9]	
12th Parliament	3rd	Jan. 15, 1914	June 12, 1914	148	Sept. 21, 1911.[3]
	4th	Aug. 18, 1914	Aug. 22, 1914	5	Oct. 7, 1911.[4]
	5th	Feb. 4, 1915	April 15, 1915	71	Oct. 6, 1917.[5]
	6th	Jan. 12, 1916	May 18, 1916	127	6 y., 0 m., 0 d.[6]
	7th	Jan. 18, 1917	Sept. 20, 1917	207[10]	
13th Parliament	1st	Mar. 18, 1918	May 24, 1918	68	
	2nd	Feb. 20, 1919	July 7, 1919	138	Dec. 17, 1917.[3]
	3rd	Sept. 1, 1919	Nov. 10, 1919	71	Feb. 27, 1918.[4]
	4th	Feb. 26, 1920	July 1, 1920	127	Oct. 4, 1921.[5]
	5th	Feb. 14, 1921	June 4, 1921	111	3 y., 7 m., 6 d.[6]

[1] Adjourned from Dec. 21, 1867, to Mar. 12, 1868, to allow the local legislatures to meet. [2] Adjourned May 23 till Aug. 13. [3] Period of general elections. [4] Writs returnable. [5] Dissolution of Parliament. [6] Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive. [7] The ordinary legal limit of duration for each Parliament is five years. [8] Not including days (59) of adjournment from May 19 to July 18. [9] Not including days (25) of adjournment from Dec. 19, 1912 to Jan. 14, 1913. [10] Not including days (39) of adjournment from Feb. 7 to Mar. 19, 1917.

4.—Duration and Sessions of Dominion Parliaments, 1867-1935—concluded.

Order of Parliament.	Session.	Date of Opening.	Date of Prorogation.	Days of Session.	Date of Election, Writs Returnable, Dissolution and Length of Parliament.[7]
14th Parliament	1st	Mar. 8, 1922	June 28, 1922	113	Dec. 6, 1921.[3]
	2nd	Jan. 31, 1923	June 30, 1923	151	Jan. 14, 1922.[4]
	3rd	Feb. 28, 1924	July 19, 1924	143	Sept. 5, 1925.[5]
	4th	Feb. 5, 1925	June 27, 1925	143	3 y., 7 m., 26 d.[6]
15th Parliament	1st	Jan. 7, 1926	July 2, 1926	177[1]	Oct. 29, 1925.[3] Dec. 7, 1925.[4] July 2, 1926.[5] 208 d.[6]
16th Parliament	1st	Dec. 9, 1926	April 14, 1927	73[2]	Sept. 14, 1926.[3]
	2nd	Jan. 26, 1928	June 11, 1928	138	Nov. 2, 1926.[4]
	3rd	Feb. 7, 1929	June 14, 1929	128	May 30, 1930.[5]
	4th	Feb. 20, 1930	May 30, 1930	100	3 y., 7 m., 0 d.[6]
17th Parliament	1st	Sept. 8, 1930	Sept. 22, 1930	15	July 28, 1930.[3]
	2nd	Mar. 12, 1931	Aug. 3, 1931	145	Aug. 18, 1930.[4]
	3rd	Feb. 4, 1932	May 26, 1932	113	
	4th	Oct. 6, 1932	May 27, 1933	169[8]	
	5th	Jan. 25, 1934	July 3, 1934	160	
	6th	Jan. 17, 1935			

[1] Including days (13) of adjournment from Mar. 3 to Mar. 15. [2] Not including days (54) of adjournment from Dec. 15 to Feb. 8. [3] Period of general elections. [4] Writs returnable. [5] Dissolution of Parliament. [6] Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive. [7] The ordinary legal limit of duration for each Parliament is five years. [8] Not including days (65) of adjournment from Nov. 25 to Jan. 30.

A brief résumé of the history of parliamentary representation follows. Attention may be drawn to the growth in the number of members of both the Senate and the House of Commons since Confederation and to the greatly increased unit of representation in the Lower House.

Subsection 3.—The Senate.

The British North America Act, 1867, provides in Sections 21 and 22 that "the Senate shall consist of seventy-two members, who shall be styled Senators. In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—(1) Ontario; (2) Quebec; (3) The Maritime Provinces, Nova Scotia and New Brunswick; which three divisions shall be equally represented in the Senate as follows: Ontario by twenty-four senators; Quebec by twenty-four senators; and the Maritime Provinces by twenty-four senators, twelve thereof representing New Brunswick and twelve thereof representing Nova Scotia. In the case of Quebec, each of the twenty-four senators representing the province shall be appointed for one of the electoral divisions of Lower Canada, specified in Schedule A to Chapter I of the Consolidated Statutes of Canada". Further, under Section 147 of the same Act, it is provided that "in case of the admission to Confederation of Newfoundland or Prince Edward Island, . . . each shall be entitled to a representation in the Senate of four members". "Prince Edward Island, when admitted, shall be deemed to be comprised in the third of the three divisions into which Canada is divided by this Act" and on its admission "the representation of Nova Scotia and New Brunswick shall, as vacancies occur, be reduced from twelve to ten members respectively". In case of the admission of Newfoundland, the normal membership of the Senate of 72 members was to be increased to 76, while the maximum number of 78 (Sec. 28) was to be 82, Sec. 26 containing a provision for the appointment of three or six additional members in certain cases, to represent equally the three divisions of Canada.

By 33 Vict., c. 3, an Act to establish and provide for the government of the province of Manitoba, passed in 1870, the newly formed province was given representation of two members in the Senate, provision being made at the same time for increases in representation to three and four on increases of population, according to the decennial census, to 50,000 and 75,000 respectively. In the following year, British Columbia, on being admitted to the Union by an Imperial Order in Council of May 16, 1871, was given representation by three senators. Two years later, when Prince Edward Island was admitted to Confederation by an Imperial Order in Council of June 26, 1873, it was granted representation in the Senate of four members under the terms of the British North America Act, as cited above. Thus, in 1873, the seven provinces of Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia and Prince Edward Island were represented by a total of 77 members in the Senate, their individual representation at the time being 24, 24, 10, 10, 2, 3 and 4 members respectively.

In 1882, following the Census of 1881 and an increase of population in Manitoba to 62,260 persons, the representation of this province was increased to three members under authority of the Manitoba Act, 1870. Later, by 50-51 Vict., c. 38, an Act of 1887, the representation of the Northwest Territories in the Senate was fixed at two members. A subsequent increase resulted from the growth of population in Manitoba to 152,506, as shown by the Census of 1891, the province being granted a fourth senator under the terms of the Manitoba Act of 1870. An Act passed in the session of 1903, 3. Edw. VII, c. 42, provided for an increase in the representation of the Northwest Territories from two to four members, bringing the total representation at this date to 83 members.

On the establishment of the provinces of Alberta and Saskatchewan out of the former Northwest Territories in 1905, under 4-5 Edw. VII, cc. 3 and 42, provision was made for their representation in the Senate by 4 members each, which might be increased by Parliament to 6 on the completion of the next decennial census. This change in representation brought the membership of the Upper Chamber to a total of 87.

In 1915, by an amendment to the British North America Act (5-6 Geo. V, c. 45), an important change was made with regard to the constitution of the Senate. The number of divisions provided for by Section 22 of the original Act was increased from three to four, the fourth comprising the four western provinces of Manitoba, Saskatchewan, Alberta and British Columbia. Each of these provinces was to be represented by 6 members under the Act, the division being thus represented by 24 members and placed on an equality with the others with respect to membership. A corresponding change was made in the number of additional senators provided for by the original British North America Act by substituting increases of four or eight members for the three or six cited in Section 26 of the Act of 1867. Normal representation, therefore, is at present fixed at 96, which number may be increased if necessary to 100 or to a maximum of 104.

The entry of Newfoundland to the Union is still provided for by the above Act, Subsection 6 of Sec. 1 of which sets out its representation as six members instead of the four granted by the Act of 1867. If Newfoundland were admitted to the Dominion, the normal number of senators would be 102 with a maximum of 110.

In Table 5 the growth of membership in the Senate is shown by divisions and provinces from 1867 to 1915, since when no change has taken place. The names and addresses of the senators from each province are given as at Mar. 1, 1935, in Table 6.

Subsection 4.—The House of Commons.

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick". Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:—

"(1) Quebec shall have the fixed number of Sixty-five Members;

"(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);

"(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;

"(4) On any such Readjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;

"(5) Such Readjustment shall not take effect until the Termination of the then existing Parliament".

Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed".

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

Readjustments in Representation.—As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 (33 Vict., c. 3), 4 members to represent the newly created province of Manitoba; also, according to the agreement under which British Columbia entered Confederation, ratified by Imperial Order in Council of May 16, 1871, 6 members were added to represent the new province, making a total of 191 members at the end of the first Parliament of Canada.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872), increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21, and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that province—bringing the membership of the House of Commons to 206.

Results of the second census, that of 1881, necessitated the passage of a new Representation Act (45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5, thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24, passed in 1886, 4 members for the Northwest Territories (2 for the then provisional district of Assiniboia and 1 each for the then provisional districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census, of 1891, was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213.

The fourth census, of 1901, resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4. On the other hand, the representation of Manitoba was increased from 7 to 10, of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10. By Chapter 37 of the Statutes of 1902, a member was added for the Yukon Territory, so that the net effect of the changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth of the Northwest Territories, however, led to their division and the admission to Confederation in 1905 of the provinces of Alberta and Saskatchewan. In the Acts admitting them—the Alberta Act (4-5 Edw. VII,

c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)—it was provided that their representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10 and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 82, of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3. On the other hand, the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13. The net result was an increase of 13 members in the total membership of the House of Commons, bringing the figure to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19.) The total membership, therefore, of the House of Commons in the thirteenth and fourteenth Parliaments (elected in 1917 and 1921 respectively) was 235.

As a result of the smaller increase of population shown by the Census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 4 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because of the provisions of the British North America Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because under Subsection 4 of Section 51 of the British North America Act (quoted p. 73), the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921 population of Quebec, within its 1911 boundaries, *viz.*, 2,358,412, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283.

The number of representatives of each province elected at each of the seventeen general elections since Confederation is given in Table 7.

7.—Representation in the House of Commons as at Dominion General Elections 1867-1930.

Province.	1867.	1872.	1874.	1878.	1882.	1887.	1891.	1896.	1900.	1904.	1908.	1911.	1917.	1921.	1925.[1]

Saskatchewan	–	–	–	–	–	4	4	4	4	10	10	10	16	16	21
Alberta	–	–	–	–	–						7	7	12	12	16
Yukon	–	–	–	–	–	–	–	–	–	1	1	1	1	1	1
Totals	**181**	**200**	**206**	**206**	**211**	**215**	**215**	**213**	**213**	**214**	**221**	**221**	**235**	**235**	**245**

[1]The representation at the general elections of 1926 and 1930 was the same as in 1925.

The Unit of Representation.—While the number of members of the House of Commons has been growing fairly steadily since Confederation, the unit of representation—one-sixty-fifth of the population of Quebec within its 1911 boundaries—has also been increased after each census in consequence of the growth of the population of Quebec. The units of representation, as determined by the decennial censuses taken since Confederation, are as follows: 1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283; 1931, 44,186, being one-sixty-fifth of the population of Quebec exclusive of Ungava.

The 1931 Redistribution Problem.—The population of Quebec in 1931, exclusive of the population (2,177) of the territory added to Quebec by the Boundaries Extension Act of 1912, was 2,872,078, which, divided by 65, gives a unit of representation of 44,186. The quotient obtained by dividing the population of each province as shown at the date of the census by 44,186 indicates (except where Subsection 4 of Section 51 of the British North America Act and the Amending Act of 1915 apply) the number of members to which each province is entitled. These numbers as determined by the Census of 1931 and the two preceding censuses are shown in Table 8.

8.—Representation of the Provinces and Territories of Canada in the House of Commons, as Determined by the Censuses of 1931, 1921 and 1911.

[1] Represents the population in the area added to Quebec by the Quebec Boundaries Extension Act, 1912, the population of which by Sec. 2, ss. "A" of said Act, is to be excluded from the population of the province in ascertaining the unit of representation.

The application of the provisions of Subsection 4 of Section 51 of the British North America Act (quoted on p. 73) to Prince Edward Island, Nova Scotia,

New Brunswick, Ontario, Manitoba (the provinces in which a decrease in the rate of growth of population as compared with the rate of Canada as a whole, has taken place), is shown in the following statement:—

Province.	Proportion which Population of each Province Bears to the Total Population in Canada.		Decrease in Proportion from 1921-1931.	Ratio of Decrease in Proportion from 1921 to 1931 to Proportion in 1921.	Decrease greater than, equal to or less than One-twentieth of Proportion in 1931.
	1921.	1931.			
Prince Edward Island	·01008426	·00848412	·00160014	·1587	greater
Nova Scotia	·05961197	·04942243	·01018954	·1709	greater
New Brunswick	·04413965	·03933963	·00480002	·1087	greater
Ontario	·33384627	·33070769	·00313858	·0094	less
Manitoba	·06943053	·06747166	·00195887	·0282	less

The above figures show that no reduction should take place in the representation of Ontario or Manitoba, since the proportion which the population of each of these provinces bore to the number of the aggregate population of Canada at the readjustment of the number of members for the provinces, based on the Census of 1921, was ascertained at the Census of 1931 to be diminished by less than one-twentieth part. The situation as regards the other three provinces and Yukon is as follows:—

Nova Scotia.—The proportion for Nova Scotia having diminished by more than one-twentieth part, the provisions of Subsection 4 of Section 51 do not apply and the representation of Nova Scotia should be reduced, in accordance with the provisions of Section 51, Subsections 2 and 3 of the Act, by two members.

Prince Edward Island.—Prince Edward Island would only have two members on the strict basis of population but its representation remains unchanged at 4 under the B.N.A. Act of 1915 referred to above.

New Brunswick.—The representation of New Brunswick if fixed by the unit of representation (44,186) would be reduced from 11 to 9; but as the B.N.A. Act of 1915 provided that "a province shall always be entitled to a number of members in the House of Commons, not less than the number of senators representing such province", the representation of New Brunswick will be 10 instead of 9, corresponding with the number of senators from that province.

Yukon.—The representation of Yukon is not determined by the B.N.A. Act, but is within the competence of Parliament to decide. Pursuant to the Representation Act 1933, it will continue to be represented.

An Act to readjust the representation in the House of Commons (23-24 George V, Chapter 54) and cited as "The Representation Act, 1933" was assented to on May 27, 1933. The changes in representation made by the Act are exactly as outlined above, the provisions being:—

> The House of Commons shall consist of two hundred and forty-five members, of whom eighty-two shall be elected for the province of Ontario, sixty-five for the province of Quebec, twelve for the province of Nova Scotia, ten for the province of New Brunswick, seventeen for the province of Manitoba, sixteen for the province of British Columbia, four for the province of Prince Edward Island, twenty-one for the province of Saskatchewan, seventeen for the province of Alberta, and one for Yukon Territory.

Constituencies and Representatives in the Seventeenth Parliament.—A complete list of the constituencies, with their 1931 populations, the voters on the list and votes polled at the general election of July 28, 1930, together with the

names and addresses of those then elected to the House of Commons of the seventeenth Parliament of Canada, will be found in Table 9. Changes occurring at subsequent by-elections to Mar. 5, 1935, are indicated in the footnotes.

9.—Populations of Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Seventeenth General Election.

Subsection 5.—The Dominion Franchise.*

It was provided by the B.N.A. Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently remained the same for both Dominion and provincial elections until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (1885, c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions; each province, of course, continued separately to define the qualifications of voters at provincial elections. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (1898, c. 14), the provincial franchises were again made applicable at Dominion elections, except that on the constitution of the provinces of Alberta and Saskatchewan it was provided that manhood suffrage, which had already been adopted for the Northwest Territories under an Act to amend the N.W.T. Act (1895, c. 16), should continue in force for Dominion purposes independently of any action that might be taken by the newly elected legislatures of these two provinces (R.S.C. 1906, c. 6, ss. 31–65). In the other provinces the rules as to the qualifications of voters varied from time to time. In Manitoba manhood suffrage had been adopted in 1888 (1888, c. 2), and the franchise was extended to women on the same terms as to men in 1916 (1916, c. 36). Alberta and Saskatchewan, on their establishment as provinces, continued the previously existing manhood suffrage and both extended the franchise to women on the same terms as to men in 1916 (Alta. 1916, c. 5; Sask. 1916, c. 37). British Columbia adopted manhood suffrage in 1904 (1903–1904, c. 7), Ontario in 1907 (7 Edw. VII, c. 5), and New Brunswick in 1916 (6 Geo. V, c. 16); in British Columbia (1917, c. 23) and in Ontario (7 Geo. V, c. 5), the franchise was extended equally to women in 1917, and in New Brunswick this was done in 1919 (9 Geo. V, c. 63). In Quebec and Prince Edward Island the provincial franchises throughout the period in question were not so wide; in neither were women admitted to vote and certain property or other special qualifications were required in each. A property qualification was also required in Nova Scotia until 1920 (10-11 Geo. V, c. 49), but between 1918 and 1920 men and women had voted on equal terms (9 Geo. V, c. 3). The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War Times Elections Act (1917, c. 39), which admitted certain near female relatives of serving soldiers and

*Revised by John Thompson, Dominion Franchise Commissioner.

sailors to vote at Dominion elections, and three years later, on the adoption of a New Dominion Elections Act (1920, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. Subject to a modification of the usual rules as to changes of nationality, which was amended in 1921 (1921, c. 29, s. 3) and repealed in 1922 (1922, c. 20, s. 1), the right to vote was conferred by the new Act upon all British subjects, male and female, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote, this last restriction having been removed two years later (1922, c. 20), so far as it applied to general elections.

The right to vote is at present provided for in the Dominion Franchise Act, (24-25 Geo. V, c. 51). The franchise is conferred upon all British subjects who are of the full age of twenty-one years and who have been ordinarily resident in Canada for at least one year and for three months resident in the electoral district in which application is made for registration.

Those denied the right to vote are: prisoners undergoing punishment for any offence; persons restrained of their liberty or management of their property by reason of mental disease; Indians ordinarily resident on an Indian reservation who did not serve in the war 1914–1918; Judges appointed by Order in Council; persons who are disqualified under the law of Canada relating to the disqualification of electors for corrupt and illegal practices; inmates of an institution which is maintained by any government or municipality for the housing of the poor; Eskimos, whether born in Canada or elsewhere; persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the war of 1914–1918; in the province of British Columbia, every Doukhobor or any descendant of such, whether born in that province or elsewhere who is by the law of that province disqualified to vote at an election of a member of the Legislative Assembly of that province.

The Use of the Franchise.—The number of voters on the lists and the number of votes polled at the general elections of 1921, 1925, 1926 and 1930, are given in Table **11.**

11.—Number of Voters and Votes Polled in the General Elections of 1921, 1925, 1926 and 1930.

		Totals	**3,466,793**	**228,070**	**3,694,863**

[1]The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

[2]Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.

[3]Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

[4]Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, 1895.

[5]By an Order in Council of June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 (43 Vict., c. 25), the district of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional districts of Yukon, Mackenzie, Franklin and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council, and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures of all the provinces with the exception of Quebec are now unicameral,* consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. For detailed description of the Provincial Governments, the reader is referred to pp. 101–115 of the 1922-23 edition of the Year Book.

The Lieutenant-Governors of the provinces, together with the names of the Ministers of the present administrations, are given in Table **13**. Details regarding Provincial Legislatures and Ministries from Confederation to 1924 were given on pp. 75–84 of the 1924 Year Book.

*The Legislative Council of Nova Scotia ceased to exist in 1928.

13.—Lieutenant-Governors of Provinces, 1867-1934, and Present Ministries.

NOTE.—The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life.

Sir Henry G. Joly de Lotbinière	June 21, 1900	J. W. Fordham Johnson	Aug. 1, 1931

TWENTY-SECOND MINISTRY.

Office.	Name.	Date of Appointment.
Premier, Minister of Railways, and President of Executive Council	Hon. T. D. Pattullo	Nov. 15, 1933
Minister of Finance and Industries	Hon. John Hart	Nov. 15, 1933
Provincial Secretary and Minister of Education	Hon. G. M. Weir	Nov. 15, 1933
Attorney General	Hon. G. McG. Sloan	Nov. 15, 1933
Minister of Lands and Municipalities	Hon. A. Wells Gray	Nov. 15, 1933
Minister of Agriculture	Hon. K. C. MacDonald	Nov. 15, 1933
Minister of Mines and Labour, and Commissioner of Fisheries	Hon. G. S. Pearson	Nov. 15, 1933
Minister of Public Works	Hon. F. M. MacPherson	Nov. 15, 1933

THE TERRITORIES.

NOTE.—In 1888 the districts of Alberta, Assiniboia, Athabaska and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government, and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these districts was formed into the provinces of Alberta and Saskatchewan, on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The remaining areas (Yukon and the provisional districts of Franklin, Keewatin and Mackenzie) are now administered by the Lands, Northwest Territories and Yukon Branch, Department of the Interior. The Deputy Minister of the Department is, *ex officio*, the Commissioner of the Northwest Territories which comprises the three provisional districts.

LIEUTENANT-GOVERNORS.

Name.	Date of Appointment.	Name.	Date of Appointment.

[1]Second term.

PART IV.—REPRESENTATIVES IN OTHER COUNTRIES.*

Section 1.—Representatives within the Empire.

The policy of the early North American colonies, of maintaining in London accredited representatives for business and diplomatic purposes, was recognized in the eighteenth century as being a more satisfactory means of communication

*Revised by the Department of External Affairs, Ottawa.

with the British Government than that provided by occasional official visits or by correspondence. Edmund Burke, the noted British statesman, held the position of agent for the colony of New York for some years following 1771. Of the Canadian colonies, Nova Scotia was the first to adopt this plan, its Legislature having appointed an agent in London in 1761. New Brunswick was similarly represented in 1786, Upper Canada as early as 1794, Lower Canada in 1812 and British Columbia in 1857. Following Confederation, several of the provinces continued to adhere to, and in certain cases enlarge upon, the practice to the extent of themselves appointing Crown Agents or Agents General. Such developments as have taken place are dealt with in the following paragraphs.

Prince Edward Island.—Prince Edward Island appointed its first official Agent General to London, England, by Order in Council of May 14, 1902. The appointee held office until his resignation on Aug. 17, 1917. Since 1917, the province has been without an Agent General in England or elsewhere.

Nova Scotia.—The first Agent General from Nova Scotia was appointed on Oct. 24, 1885, by Order in Council. This appointment was honorary but later the Legislature estimated for a salary to be paid. The office has never been abolished, although the last appointee died in 1929 and, since the end of the fiscal year 1932 no estimate has been made by the Legislature for remuneration or other expenses in connection with the office.

New Brunswick.—A London office was opened by the province of New Brunswick on April 6, 1887. The last appointee to the position of Agent died in 1920; no successor was appointed and the office was then closed.

Quebec.—This province appointed its first "Agent-General for the Province [of Quebec] in the United Kingdom of Great Britain and Ireland" on Aug. 7, 1911, although legislative action had been taken to establish the office in 1908, the Act being declared to come into force by proclamation. The office of Agent General of Quebec has not been abolished and is still functioning. The Agent General is located in London.

Ontario.—In 1872 the Ontario Government had Agents established in various important centres in England and also in Scotland and Ireland, in connection with immigration matters. Later all these, excepting the Agent at London, were withdrawn. It is only during the past fifteen or twenty years, however, that the term "Agent General" has been used in connection with the London appointee. The London office was closed on Aug. 31, 1934.

Manitoba.—The Provincial Government of Manitoba has never had an Agent or Agent General in London.

Saskatchewan.—The province of Saskatchewan is represented by one of its government officials in Canada House, but has never established its own headquarters nor the office of Agent General.

Alberta.—The office of the Agent General for the province of Alberta was established in London on Feb. 2, 1927, by order of the Lieutenant-Governor in Council. The office was abolished on Aug. 31, 1933.

British Columbia.—By the Agent General Act, 1901, (B.C. I Ed. VII, c. 1) assented to on May 11 of that year, the office of Agent General for British Columbia, was established, and London was made the seat of this official representative.

The High Commissioner for Canada.—With the federation of the provinces of British North America in 1867, a new political entity which could not avail itself of the services of the provincial agents was brought into existence. To supplement the ordinary method of communication between the Canadian and British Governments (which at that time was by correspondence between the Governor General and the Secretary of State for the Colonies, and is now between the Secretary of State for External Affairs of Canada and the Secretary of State for Dominion Affairs in London), the position of High Commissioner for Canada was created in 1880 (see R.S.C. 1927, c. 92). The duties of the office are defined in the Act as follows:—

"The High Commissioner shall—

"(a) act as representative and resident agent of Canada in Great Britain and in that capacity, execute such powers and perform such duties as are, from time to time, conferred upon and assigned to him by the Governor in Council;

"(b) take the charge, supervision and control of the immigration offices and agencies in Great Britain, under the Minister of Immigration and Colonization;

"(c) carry out such instructions as he, from time to time, receives from the Governor in Council respecting the commercial, financial and general interests of Canada in Great Britain and elsewhere."

Sir Alexander Galt was the first Canadian High Commissioner, holding office from May 11, 1880, until May, 1883; in 1884 he was succeeded by Sir Charles Tupper. Lord Strathcona and Mount Royal was appointed in 1896. Sir George H. Perley took charge of the High Commissioner's Office in 1914 but was appointed High Commissioner only on Oct. 12, 1917. The Hon. P. C. Larkin was appointed in February, 1922, and after his decease (Feb. 3, 1930) the Hon. G. Howard Ferguson was appointed on Nov. 28, 1930. The office of the High Commissioner for Canada is in Canada House, Trafalgar Square, London, S.W. 1.

High Commissioner of the United Kingdom in Canada.—His Majesty's Government in the United Kingdom appointed in April, 1928, a High Commissioner in Canada, Sir William H. Clark, who was succeeded in January, 1935, by Sir Francis Floud, K.C.B. The High Commissioner resides in Ottawa, and his position corresponds to that of the High Commissioner for Canada in the United Kingdom. This appointment was made in consequence of discussions at the Imperial Conference of 1926. The relevant passage in the report of the Inter-Imperial Relations Committee runs as follows:—

"A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the Dominions. By reason of his constitutional position, as explained in Section IV (b) of this report, the Governor General is no longer the representative of His Majesty's Government in Great Britain. There is no one therefore in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in Great Britain.

"We summed up our conclusions in the following resolution which is submitted for the consideration of the Conference:—

" 'The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and in the Dominion capitals, to supplement the present system of intercommunication and the reciprocal supply of information on affairs requiring joint consideration. The manner in which any new system is to be worked out is a matter for consideration and settlement between His Majesty's Governments in Great Britain and the Dominions, with due regard to the circumstances of

each particular part of the Empire, it being understood that any new arrangements should be supplementary to, and not in replacement of, the system of direct communication from Government to Government and the special arrangements which have been in force since 1918 for communications between Prime Ministers' ".

Section 2.—Representatives outside the Empire.

The Canadian Minister to the United States.—For many years the diplomatic business between Canada and the United States has been steadily increasing, as the natural result of the proximity of the two countries and the closeness of the business relationships between their citizens. Before the Great War a former British Ambassador at Washington, Lord Bryce, said that between two-thirds and three-quarters of the work of the British Embassy in the United States was occasioned by Canadian affairs.

In January, 1918, a temporary Canadian War Mission was established at Washington under the chairmanship of Mr. Lloyd Harris, and was maintained for some years after the close of the War. Though not a formal diplomatic mission, its duties extended to questions usually dealt with through diplomatic channels. After the retirement of this mission Canada was represented in Washington by Mr. M. M. Mahoney, who acted as agent of the Department of External Affairs, and, through the courtesy of the British Government, occupied an office at the British Embassy.

In 1920, following discussions between the British and Canadian Governments, it was announced that agreement had been reached upon the appointment of a Canadian Minister at Washington, who would act for the British Ambassador in the latter's absence. No appointment was made until Nov. 26, 1926, when, after decision to omit the arrangement that the Canadian Minister should substitute for the British Ambassador, Hon. Vincent Massey was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in the United States of America to represent the interests of the Dominion of Canada. Mr. Massey took up his duties in February, 1927, and held office until July 23, 1930. Hon. W. D. Herridge was appointed Minister to the United States on Mar. 7, 1931. The Canadian Legation in Washington is situated at 1746 Massachusetts Ave.

The United States Government reciprocated in 1927 by appointing Hon. William Phillips its first Minister to Canada; his successor, Hon. Hanford MacNider, was appointed in August, 1930, and resigned in September, 1932. The United States Minister in Ottawa is now the Hon. W. D. Robbins, appointed in May, 1933.

The Canadian Minister to France.—For many years the Canadian Government maintained an agency at Paris. The post was first occupied in 1882 by Hon. Hector Fabre, who also represented for a time the Government of Quebec. After his death Hon. Philippe Roy was appointed in May, 1911, with the title of Commissioner-General of Canada in France. In 1928 an exchange of Ministers was agreed upon between Canada and France, and in September of that year Hon. Philippe Roy was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in France to represent the interests of the Dominion of Canada. The Canadian Legation in Paris is situated at No. 1, rue François premier.

The French Government appointed M. Georges Jean Knight as its first Minister in Canada in 1928. From March, 1931, to September, 1934, M. Charles Arsène Henry was Minister. He was succeeded in September, 1934, by M. R. Brugère.

The Canadian Minister to Japan.—In 1928 an exchange of Ministers was agreed upon between the Governments of Canada and Japan, and Hon. H. M. Marler was appointed in 1929 as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan to represent the interests of the Dominion of Canada. The Canadian Legation is at 16 Omote-Cho, Sanchome, Akasaka-Ku, Tokyo.

The Japanese Government appointed Mr. Iyemasa Tokugawa as its first Minister in Canada in 1929. Mr. Tokugawa presented his Letters of Recall towards the close of 1934. A successor has not yet (Mar. 1, 1935), been appointed.

Canadian Advisory Officer, League of Nations.—The practice of appointing permanent representatives at Geneva accredited to the League of Nations has been largely followed by those nations which are situated at a distance from Geneva. It was found that, while countries adjacent to the seat of the League were able without difficulty to include in the personnel of their delegations to the Assembly and Council various advisors and assistants at a minimum of expense, distant countries were at a disadvantage in this respect. Canada's duties as a member of the Assembly and of the International Labour Conference, and as one of the countries represented on the Governing Body of the International Labour Office, made this disadvantage especially felt. Accordingly, the position of Dominion of Canada Advisory Officer, League of Nations, was created by Order in Council P.C. 2174 of Dec. 17, 1924, and Dr. W. A. Riddell was appointed to the post on Jan. 1, 1925.

The duties of the Canadian Advisory Officer are "to establish and maintain as close relations as possible with the Secretariats of the League of Nations and the International Labour Office", to "communicate with the Government of Canada as to all matters arising and requiring its attention", and to "act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to conferences arising out of the organizations beforenamed". The office of the Canadian Advisory Officer is situated at 41, Quai Wilson, Geneva.

PART V.—CANADA AND THE LEAGUE OF NATIONS.*

The League of Nations is an association of fully self-governing States whose relations are governed by the Covenant. The League of Nations acts through an Assembly and Council composed of representatives of Governments. Sixty States are at present Members of the League, as compared with forty-two at the time of the first Assembly in 1920. Canada, as a signatory of the Treaties of Peace, is an original Member of the League.

The League of Nations has two aims: (1) to preserve peace and to seek a settlement of international disputes; and (2) to organize in the most varied spheres co-operation of peoples, with a view to the material and moral welfare of humanity.

The Covenant, which constitutes the fundamental charter of the League of

*Prepared by N. A. Robertson, Department of External Affairs. A fuller article on Canada and the League of Nations, contributed by Mr. N. A. Robertson of the Department of External Affairs to the 1931 Year Book, gave information regarding the budget of the League, mandates, minorities, the economic and financial organization, the organization for communications and transit, the health organization and social and humanitarian work of the League, in addition to fuller treatment of the subjects here dealt with. This article appeared at pp. 115-22 of the 1931 Year Book. The League of Nations Society in Canada, 124 Wellington St., Ottawa, is the authorized agent for the publications of the League of Nations.

Nations, was formed in 1919 by a Commission set up for the purpose, which drew up the twenty-six articles of which it is composed. The Covenant was inserted at the head of the several Treaties of Peace and came into force on Jan. 10, 1920.

The Organs of the League.—The organs of the League are:—

(a) The Assembly;
(b) The Council;
(c) The Secretariat;
(d) The International Labour Organization; (see Chapter XIX).
(e) The Permanent Court of International Justice.

The Assembly.—The Assembly consists of representatives of the members of the League, and meets annually in regular session each September in Geneva. At the 15th Assembly in September, 1934, the Canadian Delegation was headed by the Rt. Hon. R. B. Bennett, Prime Minister and Secretary of State for External Affairs.

The Council.—The Council, which originally consisted of five permanent members and four non-permanent members, now consists of six permanent members (the British Empire, France, Italy, Germany,* Japan† and the U.S.S.R.) together with ten non-permanent members elected for three years (three retiring each year) from among the sixty States which are Members of the League. The non-permanent members of the Council are at present as follows: Czechoslovakia, the United States of Mexico and Poland, terms expiring 1935; Argentine Republic, Australia, Denmark and Portugal, terms expiring 1936; Chile, Spain and Turkey, terms expiring 1937. Canada was a member of the Council of the League from 1927 to 1930.

The Council, which normally meets four times a year and more frequently if circumstances should require it to do so, may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

The Secretariat.—The Permanent Secretariat represents the Civil Service of the League. The staff is appointed by the Secretary General with the approval of the Council. The officials of the Secretariat of the League are exclusively international officials, having international and not national duties. The first Secretary General, Sir Eric Drummond, who was named in the Annex to the Covenant, resigned in 1933 and was succeeded by M. Joseph Avenol, who is assisted by two Deputy Secretaries General (one Spanish and one Italian) and by one Under-Secretary General (British).

Permanent Court of International Justice.—The Permanent Court of International Justice was established by the Protocol of Dec. 16, 1920, in accordance with Article 14 of the Covenant of the League of Nations. It is composed of a body of fifteen judges elected by the Assembly and Council of the League of Nations for a term of nine years, and sits at the Hague. The Court is competent to hear and determine any dispute of an international character which the parties thereto submit to it; it may also give an advisory opinion upon any dispute or question referred to it by the Council or the Assembly. Article 36 of the Statute of the Court provides that any State may recognize as compulsory the jurisdiction of the Court in all or any classes of legal dispute concerning:—

For footnotes see end of article, p. 97.

(*a*) The interpretation of a Treaty.

(*b*) Any question of international law.

(c) The existence of any fact which, if established, would constitute a breach of an international obligation, and the nature and extent of the reparations to be made for the breach of the international obligation.

Canada has been a Member of the Court from its establishment, and in 1929 accepted, subject to certain reservations, the compulsory jurisdiction of the Court in the cases contemplated in Article 36.

The Budget of the League.—The expenditure of the League is covered by the contributions of States Members which are fixed in accordance with a scale which takes into account the population, area and public revenue of each State concerned. The Budget for the year 1934 was 30,827,805 gold francs, of which 20,031,102 francs were for the work of the Assembly, Council and Secretariat, 8,257,576 francs for the International Labour Office, and 2,538,827 for the Permanent Court of International Justice. Canada's share of this outlay assessed at 35/1013 of the total was 1,065,126.55 francs gold, or 205,569.42 dollars gold.

Membership of the League of Nations.—The 60 States which are Members of the League (November, 1934), are as follows:—

Abyssinia
Afghanistan
Union of South Africa
Albania
Argentine Republic
Australia
Austria
Belgium
Bolivia
British Empire
Bulgaria
Canada
Chile
China
Colombia
Cuba
Czechoslovakia
Denmark
Dominican Republic
Ecuador
Estonia
Finland
France
Germany*
Greece
Guatemala
Haiti
Honduras
Hungary
India
Iraq
Irish Free State
Italy
Japan†
Latvia
Liberia
Lithuania
Luxemburg
United States of Mexico
Netherlands
New Zealand
Nicaragua
Norway
Panama
Paraguay‡
Persia
Peru
Poland
Portugal
Roumania
Salvador
Siam
Union of Soviet Socialist Republics
Spain
Sweden
Switzerland
Turkey
Uruguay
Venezuela
Yugoslavia

*By a letter received on Oct. 21, 1933, Germany gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant, which provides that after two years' notice a Member which has discharged its international obligations and other obligations under the Covenant, may withdraw from the League.

†By a telegram received Mar. 27, 1933, Japan gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant.

‡By a telegram sent May 23, 1934, Paraguay gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant.

CHAPTER IV.—POPULATION.*

The Population chapter of the Year Book is a *précis* of the results of investigations into the number and the constitution of the population made in the seven censuses of Canada since Confederation, summarizing the growth and distribution of population between 1871 and 1931, as shown by the successive decennial censuses, in regard to the chief matters investigated at the censuses.

The modern census, now established in all civilized countries as the chief method of measuring periodically the population and its social and economic condition, has been described by a modern United States' writer as the greatest single peace-time activity in which a government engages, both in respect of the physical extent of its organization and the important part which its results play in the general administration of public affairs.

Under the Canadian consitution, the legal *raison d'être* of the census is to determine representation in the House of Commons; after each decennial census a redistribution of seats in the House, following the course of the movement of population, is made in the manner described on pp. 74–77 of this volume. But the census, especially since the introduction of methods of mechanical tabulation, has become far more than a mere counting of heads. It is a great periodical stock-taking of the people and their affairs, designed to show as fully as possible the stage which has been reached in the progress of the nation. Thus the numbers, local distribution, age, sex, racial origin, nationality, language, religion, education, housing and occupations of the people, severally, constitute investigations of enormous importance, to which all the continuous and routine statistics collected in the ordinary course of administration must be related if their importance is to be realized. The census, in fine, rounds out and completes the scheme of information upon which the Government relies in conducting the business of the country.

On account of the requirements as to parliamentary representation and the payment of provincial subsidies, which are based on population, the Canadian census is taken on the *de jure* principle; *i.e.*, each person is counted as belonging to the locality in which he is regularly domiciled, irrespective of where he may be at the date of the enumeration. Under the *de facto* method, adopted in the United Kingdom, each individual is counted as belonging to the locality where he is found on the census date. The *de facto* method is undoubtedly simpler, but the *de jure* plan better portrays the permanent condition of the population. The chief difficulty in the application of the latter method is found in connection with holiday resorts, in the segregation of "visitors" and the tracing of "absentees". A date prior to the opening of the holiday season is accordingly chosen for the date of the census. In the Canadian census, students and inmates of hospitals are assigned to their home localities, while inmates of prisons, jails, lunatic asylums, etc., are counted where found.

Section 1.—Census Statistics of General Population.

Since the creation of the Dominion of Canada, in 1867, decennial censuses have been taken on the *de jure* plan as of the dates April 2, 1871, April 4, 1881, April 5, 1891, April 1, 1901, June 1, 1911, 1921, and 1931. The population of Canada and its percentage distribution as on each date, together with the absolute and percentage increases from decade to decade, are given in Tables **1** to **4** immediately following.

*This chapter has been revised by A. J. Pelletier, Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this branch will be found in Chapter XXIX, Section I, under "Population".

[1]The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of immense areas to form Yukon and the provinces of Alberta and Saskatchewan as well as to extend the boundaries of the older provinces of Quebec, Ontario and Manitoba.
[2]Revised in accordance with the Labrador award of the Privy Council, Mar. 1, 1927.

Early Censuses.—The credit of taking the first census of modern times belongs to Canada. The year was 1666, the census that of the colony of New France. Still earlier records of settlement at Port Royal (1605) and Quebec (1608) are extant; but the Census of 1666 was a systematic "nominal" enumeration of the people, taken on the *de jure* principle on a fixed date, showing age, sex, occupation and conjugal and family condition. A second census in 1667 included the areas under cultivation and the numbers of sheep and cattle. When it is recalled that in Europe the first census dates only from the eighteenth century (those of France and England from the first year of the nineteenth) and that, in the United States, the census begins only with 1790, the achievement of the primitive St. Lawrence colony, in instituting what is to-day one of the principal instruments of government throughout the civilized world, may call for more than passing appreciation.

The Census of 1666 (the results occupy 154 pages in manuscript, and are still to be seen in the Archives in Paris, or in a transcript at Ottawa) showed some 3,215 souls. It was repeated at intervals more or less regularly for a hundred years. By 1685 the total had risen to 10,904, including 1,538 Indians settled in villages and living a civilized life under the supervision of the missionaries. By the end of the century it had passed 15,000, and this was doubled in the next twenty-five years. Not to present further details, some of which will be found in the Chronology on pp. 54–63, it may be said that at the time of the cession (1763) the population of New France was nearly 70,000 (69,810 in 1765), whilst another 10,000 French (thinned to these proportions by the expulsion of the Acadians) were scattered through what are now Nova Scotia, New Brunswick and Prince Edward Island. The British population of Nova Scotia was 8,104 in 1762, thirteen years after the foundation of Halifax in 1749.

Our chief sources of statistics for half a century and more after the cession are the reports—more or less sporadic—of colonial governors, though censuses of the different sections under British rule were taken at irregular intervals. British settlement on a substantial scale in the Gulf provinces and in Ontario dates only from the Loyalist movement which followed the American Revolution, at the end of which, *i.e.*, about the year of the Constitutional Act (1791), the population of

Lower Canada was approximately 163,000, whilst the newly constituted province of Upper Canada, under Lieutenant-Governor Simcoe, numbered perhaps 15,000, and the addition of the maritime colonies brought the total to well over 200,000. A decade later Canada began the nineteenth century with a population of probably not less than 250,000 or 260,000. Subsequent censuses gave the populations of the different colonies as follows: Upper Canada (1824) 150,066, (1840) 432,159; Lower Canada (1822) 427,465, (1844) 697,084; New Brunswick (1824) 74,176, (1840) 156,162; Nova Scotia (1817) 81,351, (1838) 202,575; Prince Edward Island (1822) 24,600, (1841) 47,042.*

The policy of irregular census-taking was supposed to have been ended after the union of Upper and Lower Canada by an Act, passed on Sept. 18, 1841, which provided for a census in the year 1842 and every fifth year thereafter, but under this Act only the census of Upper Canada was taken and the following year on Dec. 9, the Act was amended, the reason being stated as follows: "Whereas the Census of the inhabitants of Lower Canada, for the year one thousand eight hundred and forty-two as required by an Act of this Legislature, . . . hath not been duly taken . . . and whereas it is of the greatest importance that such Census should be taken . . . Be it therefore enacted . . . ." The Census of 1844 of Lower Canada was taken under this Act.

Another Act was passed and given Royal Assent on July 28, 1847, creating a "Board of Registration and Statistics" with instructions "to collect statistics and adopt measures for disseminating or publishing the same" and providing for a census to be taken in the year 1848, to be repeated in 1850 and every fifth year thereafter. This Act resulted in the Census of Upper Canada of 1848.

Finally an Act was passed on Aug. 30, 1851, providing for a census to be taken in January, 1852, then in the year 1861 and thereafter every tenth year, and that better provision should be made for taking the census. The first census thereunder was taken in January, 1852, and, as similar censuses were taken by New Brunswick and Nova Scotia, we have a regular measure of population growth in Canada over the past 80 years. The 'fifties saw a very rapid development, especially in Ontario, whilst the 'sixties showed only less substantial gains. In the years following Confederation there was a spurt, the increase between 1871 and 1881 (which included several lean years towards the end) being 635,553, or 17·23 p.c. In neither of the last two decades of the nineteenth century, however, was this record equalled either absolutely or relatively, the gains in each being under 550,000, or 12 p.c. With the end of the century the population of Canada had reached approximately five and a third millions, or twenty times that of 1800. It has increased by five millions in the past thirty years.

Expansion in the Twentieth Century.—It is within the present century that the most spectacular expansion of the population of Canada has taken place. The outstanding feature was, of course, the opening to settlement of the "last best West". The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific Railway in the 'eighties and 'nineties. But though western population was doubled in each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that western settlement and production became a first-rate economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern

*A résumé of the results of all the censuses taken in Canada between 1666 and 1931 has been published in bulletin form and will be included in Vol. I, Census of 1931.

Canada, forming the immediate basis for the move upon the West. At the back, of course, was the heavy inflow of British and other capital—a total of $1,500,000,000 between 1900 and 1912—which went to finance the large constructive undertakings (chiefly railway, municipal and industrial) which characterized the movement and which represented at bottom the traditional policy of England in search of cheap and abundant food for her workshop population. The years 1901 to 1911, in brief, form the *decas mirabilis* of Canadian expansion. The immigration movement just mentioned, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years between 1901 and 1911 it exceeded 1,800,000 and, though at least a third of these were lost (partly in the return to Europe of labour temporarily attracted by the railway and other developments in progress, and partly in the never-ceasing and natural "drag" of the United States upon a virile and less wealthy people), it formed the chief factor in the gain of 34 p.c. which the total population of Canada registered in that decade, and which was larger than the relative growth of any other country during the same period. The movement was continued and even intensified in the first three years of the second decade of the century, after which a recession set in to which the outbreak of war gave a new and wholly unexpected turn. Nevertheless, the decade which closed with the census of 1921 showed over 1,700,000 immigrant arrivals in Canada, and, though the proportionate loss of these was very heavy (probably as much as two-thirds), Canada's relative gain for the decade was again among the largest in the world.

Results of the Census of 1931.—According to the final results of the Census of 1931 the total population of the Dominion on June 1, 1931, was 10,376,786, as compared with 8,787,949 on June 1, 1921, an increase of 1,588,837 or 18·08 p.c. in the decade, as compared with 21·94 p.c. and 34·17 p.c. during the decades 1911 to 1921 and 1901 to 1911 respectively.

During the decade 1911-21 the countries which comprise the British Empire, and more especially the United States which was in the Great War for only nineteen months as against Canada's fifty-two, had suffered less in actual loss of life from the War and its consequences than the continental countries of Europe. None of them declined in population during the period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,886,699, or 5·0 p.c., as compared with an increase of 10·9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2·6 p.c., as compared with 6·5 p.c. between 1901 and 1911. Nor has this situation been much improved in the post-war decade 1921-31, for the increase in England and Wales during these years was but 5·4 p.c. and Scotland actually showed a decrease of 0·8 p.c. Of the overseas Dominions, New Zealand, according to the latest official estimate (the 1931 census was postponed), increased her population from 1,218,913 to 1,510,940 or by nearly 24 p.c. for the decade ended 1931, as compared with 20·9 p.c. and 30·5 p.c. respectively for the decades ended 1921 and 1911. In the case of the white population of South Africa, much the same condition obtained. The Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,435,734 in 1921 or by 22·01 p.c. as compared with 18·05 p.c. for the previous decade and by 19·85 p.c. to 6,630,600 in the most recent twelve-year period 1921-33.* The population of the

*As in the case of New Zealand the 1931 census was postponed, but was taken as of June 30, 1933.

continental United States increased between 1920 and 1930 from 105,710,620 to 122,775,046, an increase of 16·1 p.c., as compared with 14·9 p.c. in the decade 1910-20 and 21 p.c. in the decade 1900-10.

Considering now the movement of population within the Dominion of Canada itself, it is evident from Table **1** that in this country, as formerly in the United States, there is a distinct movement of population from east to west. In the decade from 1911 to 1921 this was clearly apparent, for the four western provinces then increased their population by no less than 44 p.c. and for the decade 1921-31 the increase was from 2,480,664 to 3,047,792, or 22·86 p.c. From 1921 to 1931 the five eastern provinces increased from 6,294,655 to 7,315,041, an increase of 1,020,386 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 16·2 p.c. over the 1921 population. The same conclusion may be deduced from Table **2**, which shows that while in 1871 only 2·97 p.c. and in 1881 only 3·89 p.c. of the population of the country dwelt west of the lake of the Woods, the percentage in 1891 was 7·23; in 1901, 12·02; in 1911, 24·08; in 1921, 28·37; and in 1931, 29·51.

On the other hand, the Maritime Provinces, which in 1871 contained 20·80 p.c. of the total population of the Dominion, had in 1881 20·13 p.c., in 1891 18·22 p.c., in 1901 16·64 p.c., in 1911 13·02 p.c., in 1921 11·38 p.c., and in 1931 only 9·72 p.c. of the population. Ontario and Quebec—the old pre-Confederation Province of Canada—still remain the chief centre of population. Their proportion of the total was 60·77 p.c. in 1931, as compared with 76·23 p.c. in 1871, 75·98 p.c. in 1881, 74·54 p.c. in 1891, 71·34 p.c. in 1901, 62·90 p.c. in 1911 and 60·25 p.c. in 1921. In other words, the net result of the sixty years has been that in 1931 three-fifths of the population of the Dominion lived in these provinces as compared with more than three-fourths in 1871.

Table **5** gives the population of each county and census division for each of the census years, 1871 to 1931.

[1]Included in Northwest Territories. [2]Populations for the provinces of Saskatchewan and Alberta are included in the N.W.T. for censuses prior to 1901. Comparative figures for the census divisions of British Columbia are not available for 1871. The chart on p. 107 shows the boundaries of the census divisions of the Prairie Provinces and British Columbia.

Centres of Population.—The "centre of population"* for the Dominion of Canada has been carefully worked out for each census from 1851-1931 inclusive and shows a definite north-westward movement up to 1911, westward for the next decade and northward for 1931. For the censuses 1851 to 1881 the location was near Valleyfield, Que.; in 1891, it was 25 miles west of Ottawa; in 1901, near Pembroke; in 1911, 45 miles west of Sudbury; in 1921, 50 miles north-east of Sault Ste. Marie; and in 1931, 35 miles north of Sault Ste. Marie.

Density of Population.—The density of population in 1931 (*i.e.*, the number of persons per square mile of the land area as in that year), as compared with 1921, 1911 and 1901 is shown by provinces and for the country as a whole in Table **6,** and by counties or census divisions in Table **7.** Generally speaking the density of population decreases as one travels westward, but the enormous area of the province of Quebec unduly reduces the density of its population, which was 5·49 in 1931. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

6.—Area and Density of Population of Canada, by Provinces, 1901-31.

[1]The populations of Ontario, Quebec, Manitoba and Northwest Territories in 1901 are not adjusted according to the provisions of the Boundary Extensions Act, 1912.

[2]Populations of Northwest River Arm and Rigolet, on Hamilton inlet, as in 1921, have been deducted from Quebec, as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927.

Elements of Growth.—The former lack of comprehensive and comparable vital statistics for the whole of Canada, together with the lack of statistics of emigration, makes it difficult to determine how far the growth of population since the

*The centres of population are the centres of gravity (not the intersection of median lines). The units of area in which the moments (*i.e.*, population multiplied by distance from a fixed point) were calculated were the permanent counties or census divisions, of which there are about 220, the same units being used so far as possible for all censuses from 1851 to 1931. The geographical centre of the unit area was assumed to be the centre of population of that unit except in the cases of the thinly settled northern areas of the counties with very large cities, where special adjustments were made.

commencement of the twentieth century is due to natural increase and how far to immigration. The following estimate (Table 8) may, however, be of interest. During the decade 1911-21, in addition to 60,000 Canadians who died overseas and nearly 20,000 who took their discharge in the United Kingdom, there were also great numbers of residents of Canada—most of them recent immigrants—who left Canada to join the forces of the Mother Country and her allies in the Great War and did not return.

8.—Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration for the Inter-Censal Periods 1901-11, 1911-21 and 1921-31.

Decade and Item.	No.
Decade, 1901-1911—	
Population, Census of April 1, 1901	5,371,315
Natural increase (1901–1911), estimated	853,566
Immigration (April 1, 1901, to May 31, 1911)	1,847,651
Total	8,072,532
Population, Census of June 1, 1911	7,206,643
Emigration (April 1, 1901, to May 31, 1911), estimated	865,889
Decade, 1911-1921—	
Population, Census of June 1, 1911	7,206,643
Natural increase (1911–1921), estimated	1,150,125
Immigration (June 1, 1911, to May 31, 1921)	1,728,921
Total	10,085,689
Population, Census of June 1, 1921	8,787,949[1]
Emigration (June 1, 1911, to May 31, 1921), estimated	1,297,740[2]
Decade, 1921-1931—	
Population, Census of June 1, 1921	8,787,949[1]
Natural Increase (1921–1931), partly estimated for the years 1921-25 in the case of Quebec	1,325,256
Immigration (June 1, 1921, to May 31, 1931), including 288,874 returned Canadians	1,509,136
Total	11,622,341
Population, Census of June 1, 1931	10,376,786
Emigration (June 1, 1921 to May 31, 1931), estimated	1,245,555
Net Gain in Population, 1901-1911	**1,835,328**
Net Gain in Population, 1911-1921	**1,581,306**
Net Gain in Population, 1921-1931	**1,588,837**

[1]Revised in accordance with the Labrador award of the Privy Council, Mar. 1, 1927.

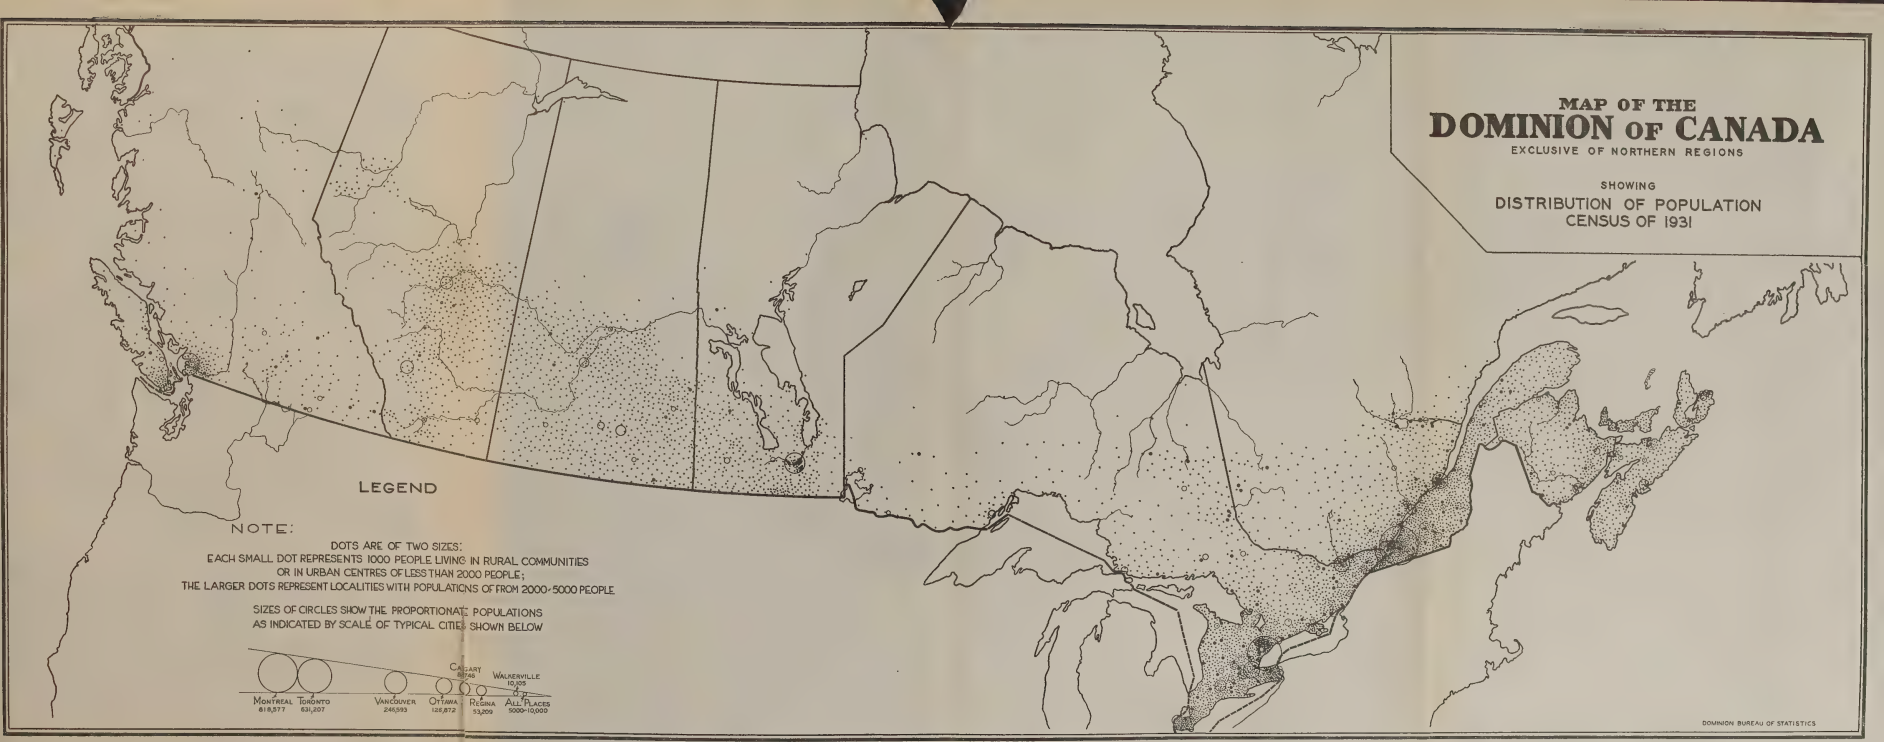
[2]This figure includes also the 60,000 Canadian lives lost at the front and the soldiers (about 20,000) enlisting in the Canadian forces and receiving their discharge in the United Kingdom.

Section 2.—Sex Distribution.

Throughout the older countries of the world there is usually found an excess of female over male population, more especially as in most of these countries the census is taken on a *de facto* instead of, as in Canada, on a *de jure* basis. The causes of this excess of female population are: (1) the normally higher rate of mortality among males; (2) the greater number of males who travel; (3) the effects of war; (4) the employment of males in the army, navy and merchant marine; and (5) the preponderance of males among emigrants. In the newer countries of the world, however, the preponderance of males among immigrants results in a general excess of male over female population. These phenomena are exemplified for both the older and the newer countries in Table **11.**

In Canada there has been an excess of male population from the commencement of its history, the first census, 1666, showing 2,034 males to only 1,181 females. As the colony increased in numbers, the disproportion between the sexes became smaller, more especially since the French-Canadian population, after about 1680, was not reinforced by immigration from the old world. In 1784, when the English-speaking immigration to Canada for purposes of settlement was commencing, there were 54,064 males and 50,759 females in the colony. At the middle of the nineteenth century, there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly-settled Upper Canada, and since Con-

federation the same phenomenon of considerable excess of males has occurred throughout the growing Northwest. The great immigration of the first decade of the present century resulted in raising what is called the "masculinity" of the Canadian population (*i.e.*, the excess of males over females per 100 of population) to the highest point in recent history, *viz.*, 6·07 p.c. in 1911. The Great War, however, both checked immigration and took about 60,000 young Canadian male lives as its toll, with the result that at the Census of 1921 the masculinity of our population was only 3 p.c.—515 males to 485 females per 1,000 of population.



In 1931 there were 518 males to 482 females for Canada as a whole. It is interesting to note that the masculinity of the population has increased in the eastern provinces and decreased in the western ones, where it was formerly greatest. In Table 9 statistics are presented, showing the number of males and females in each of the provinces and territories at each census since 1871, while Table **10** shows the proportions of the sexes and excess of males per 1,000 of population. The statistics of Table **11** show the position of Canada among other countries of the world in regard to masculinity.

[1]White population only

Section 3.—Conjugal Condition.

In Table **12** are given, in summary form together with percentages, the statistics of the conjugal condition of the population, as single, married, widowed, divorced and legally separated, for 1871 and subsequent censuses. Especially notable is the larger percentage of married in the more recent years. This is mainly attributable to the larger percentage of adults to total population in our own time. Noteworthy also is the larger percentage of divorced and legally separated in recent years. The reader is referred to p. 191, for details of divorces granted in the years 1901-33.

The conjugal condition of the 1931 population is shown by provinces in Table **13** and by age groups in Table **14.**

12.—Conjugal Condition of the Population, by Numbers and Percentages, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921 and 1931.

Section 4.—Age Distribution.

The same causes which have in the past rendered the sex distribution of population in Canada somewhat unusual have also affected its age distribution. In the first stages of the settlement of a new colony, men in the prime of life constitute the bulk of the population, and women and children are conspicuous by their absence, so that there will be a disproportionately large male population between the ages of 20 and 50, together with a low birth rate. Later on in the settlement of a new country where there is land and food for all and where the early disproportion of the sexes has been overcome, there is a very high rate of natural increase, and an extraordinarily large proportion of children among the population. Thus in 1871 (see Table **15**), 286·91 out of every 1,000 of the population of Canada were children under 10 years of age and over half the total population (526·76 out of every 1,000) were under 20 years of age. But, with the growing urbanization of population, the average age at marriage increased and children came to be regarded as a liability rather than an asset. Thus in 1911, out of every 1,000 of the population, only 231·83 were under 10 years of age and 423·42 under 20 years of age. In 1921, however, 239·67 per 1,000 of the population were under 10 years of age and 434·81 per 1,000 under 20 years. In 1931, the number of children under 10 years of age had dropped to 212·70 per 1,000 of the population, and of persons under 20 to 416·39 per 1,000.

Table **16** shows the varying age distribution of the population of the respective provinces, while Table **17** gives details of the age distribution of the population of the Dominion, by sex, for the census years 1881 to 1931.

Age Distribution by Sex.—Table **18** shows the quartile and decile age distributions by sex of the populations for each decennial census 1881-1931. These quartiles and deciles are obtained by arranging the male and female populations according to age and then dividing each array into four or ten equal parts as the case may be. The increasing average age of the population from census to census is clearly shown in the results. In 1881 one-quarter of the male population were 9·27 years of age and under, one half were 20·05 years and under, and three-quarters were 36·48 years and under. In 1931, on the other hand, one-quarter of the male population were of ages up to 12·10 years, one-half up to 25·48, and three-quarters up to 43·54 years. The female population has not shown quite as pronounced an increase in average age but a substantial increase is, nevertheless, strongly in evidence. Only in the Census of 1911, first quartile for females and third quartile for both males and females, and in the Census of 1921, first quartile for both males and females, was the upward trend of average age interrupted.

In the second part of the table the deciles show with more detail the information given by the quartiles. For instance, we see clearly that the greatest increase in average age over the 50-year period has taken place in the seventh decile, *i.e.*, in the "thirties", for both males and females and that the average age of the population in the "forties" and later, while clearly increasing, has done so with diminishing force. The influences which affect the age distribution are the birth rate and immigration. There is evidence to show that the first showed a steady reduction over the country as a whole in the '70's, '80's and '90's of last century and probably also in the early years of the twentieth century. Its effect would be felt in the younger sections first, but would be carried throughout the entire population with the passage of time, and would account for the gradual increase in average age shown in all quartiles and deciles up to 1911. Quite clearly, there is a break in the degree of increase shown in the first and second quartiles for 1911 and 1921. This could be accounted for by a temporary increase in the birth rate beginning early in the present century, which other evidence supports. The fact that such increase in the birth rate was only temporary is supported, too, by the re-establishment of the trend of increasing age in the data for 1931.

Immigration does not directly affect the younger sections of the population except to a very small degree. It immediately affects the middle-aged groups, but its effect is carried to the older groups as time goes by. The very heavy immigration of the early years of the century (1900-1911) would thus immediately affect mainly the age groups in the late "teens" and the early "twenties", and although immigration was later cut down very severely the influence of these earlier accretions to the population would creep through the upper age groups year by year. The seventh decile shows that it has now reached to those of our people in the "forties" and without doubt it will creep into the higher age groups as future censuses come to be taken.

Section 5.—Racial Origins.

In six out of the seven censuses of Canada since Confederation the racial origin of each person has been secured, the exception being in 1891. The object of this information is to ascertain from what basic ethnic stocks the Canadian population, more particularly the recently immigrated population, is derived. The answer "Canadian" is not accepted under this heading, as the purpose of the question is to obtain, in so far as possible, a definition of "Canadian" in terms of racial derivation. Of this procedure of the census, criticism has been received on two main grounds: (*a*) that there are Canadians whose family is of several generations residence in the country who may not know their ultimate racial origin, or who may be of very mixed racial origin; (*b*) that the practice tends to perpetuate racial distinctions which it is desirable to obliterate. As against these criticisms the following three points must be considered: (*a*) that the Canadian whose family is of three or more generations residence is enumerated and differentiated through the question on the birth place of parents above described; (*b*) that notwithstanding the desirability of racial assimilation, there are special features in connection with the process that require appraisement and study—for example, 271 children of Chinese fathers and 842 of Japanese fathers were born in Canada in 1931. Again, the fact that the constitution of Canada is based on the presence of two dominant races points to the desirability of a measurement of these factors: only recently it has been widely pointed out that the original French colony, numbering 75,000 at the date of the Conquest, has expanded to over three millions to-day. Measurements of this kind would be impossible if the answer "Canadian" instead of "French" were accepted under the heading of racial origin, yet undoubtedly if the descendants of the original French colonists are not "Canadians", no one is; (*c*) finally, racial origin is an important subject for study in a "new" country like Canada from a

scientific standpoint, *i.e.*, from the standpoint of the student of ethnology, criminology, and the social and "biometric" sciences in general.

To accept the answer "Canadian" to the question on racial origin would confuse the data and defeat the purpose for which the question is asked.

Racial Distribution.—The total increase in population over the decade 1921-31 was 1,588,837. The population of English origin increased by only 196,061 compared with 722,208 in the previous decade; that of Scottish origin by 172,725 compared with 175,745; and that of Irish origin by 123,005 compared with 57,419. The population of British origin, taken together, increased from 4,868,738 to 5,381,071, or by 512,333, between 1921 and 1931. This represented 32 p.c. of the total increase as compared with 61 p.c. of the total increase for the previous decade. On the other hand the population of French origin increased from 2,452,743 in 1921 to 2,927,990 in 1931, or by 475,247 (slightly under 30 p.c. of the total increase for the decade) and showed the greatest absolute increase for any decade since 1871. Figures for the minor racial groups which make up the nation (see Table **19**) would indicate that the people of Scandinavian, German and Ukrainian origins increased between 1921 and 1931 by 36 p.c., 61 p.c. and 111 p.c., respectively. Owing to the new national and racial alignments in Central and Southeastern Europe following the Great War, comparison of the post-war numerical strength of certain ethnic stocks in Canada with pre-war returns cannot be made with any certainty. For example a number of people reported as of Ukrainian stock in the seventh census were described in the Censuses of 1921 and 1911 as Galician, Bukovinian, Ruthenian or Russian.

A perspective of the actual relationship of the origin groups to the population as a whole is obtained by a study of Table **20** where the proportion which the people of each origin bear to total population is given for each census for which the figures are available. Here it is clearly seen that the relative position of the English group showed substantial improvement up to 1921 (when for the first time it superseded the French) but, in 1931, there was a decided check. The French group, on the other hand, which showed a gradual decline between 1871 and 1901 and a more pronounced one in 1911 and 1921, has improved its relative position considerably and in 1931 is once again the foremost single racial group.

Together the British and French groups now constitute 80 p.c. of the total population, compared with 83 p.c. in 1921 and 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871.

The pronounced decline after 1901 in the combined proportion of the two major racial groups, *viz.*, British and French, with a corresponding increase in ethnic stocks of minor importance, has in the main been due to the immigration of continental Europeans to Canada during the past thirty years. Altogether, the percentage of the total population of European racial origin, other than British and French,

increased from 8·53 p.c. of the total in 1901, to 12·82 p.c. in 1911, to 14·19 p.c. in 1921, and to 17·59 p.c. in 1931.

Oriental immigration to Canada in the past thirty years has been responsible for the relative increase of the Chinese and Japanese racial groups from 0·41 p.c. in 1901 to 0·67 p.c. in 1931. In the same period the population of Negro origin has declined from 0·32 p.c. to 0·19 p.c. of the total, and that of Indian and Eskimo origin from 2·38 p.c. to 1·24 p.c.

The racial origin of the population of Canada, by provinces and territories, is given in Table **21** for the Census of 1931.

Section 6.—Religions.

At each of the censuses from 1871 to 1931 every inhabitant of Canada has been asked to state the religious body of which he is a member or an adherent. During the sixty-year period there have been various fluctuations in the proportions of the population belonging to the leading religious bodies, and these fluctuations are, in a new country like this, largely occasioned by the religious affiliations of immigrants.

From Table **23**, it will be seen that throughout the sixty-year period something like two-fifths of the population of Canada has been of the Roman Catholic faith, the 1931 percentage, inclusive of Greek Catholics, being 41·30. Methodists were 16·27 p.c. of the population in 1871 but fell to 13·19 p.c. in 1921, while Presbyterians increased from 15·63 p.c. in 1871 to 16·04 p.c. in 1921, being reinforced by a considerable immigration from Scotland after the beginning of the century. The fusion of the Methodists and Congregationalists in 1925 with a large section of the Presbyterians, as the United Church of Canada, left that body the second largest religious body in the Dominion in 1931 with 19·44 p.c. of the population. The Presbyterians who did not adhere to the United Church of Canada numbered 8·39 p.c. of the population in 1931. The proportion of Anglicans in the population of Canada fell from 14·17 p.c. in 1871 to 12·69 p.c. in 1901 but thereafter the large immigration from the British Isles raised it to 16·02 p.c. in 1921, followed by a

by Provinces and Territories, Census of 1931.

slight falling off to 15·76 p.c. in 1931. The Baptists have shown a fairly steady decline from 6·87 p.c. in 1871 to 4·27 p.c. in 1931.

The immigration from non-English-speaking countries during the first three decades of the twentieth century has led to a great growth of the religious bodies whose members come from the continent of Europe. Thus the Lutherans, who were only 1·09 p.c. of the population in 1871 and 1·72 p.c. in 1901, have risen to 3·80 p.c. in 1931. The Jews, again, who were only 0·03 p.c. in 1871 and 0·31 p.c. in 1901, were 1·50 p.c. in 1931. The adherents of the Greek Orthodox Church, who in earlier years were not distinguished from Greek Catholics (the two together being only 0·29 p.c. in 1901) were 0·99 p.c. in 1931.

Of the total population in 1931 (10,376,786), 16,042 or 0·15 p.c. did not state their religion while 54,164 or 0·52 p.c., persons belonging to small sects, were classed as "various" and 21,071 or 0·20 p.c. as of "no religion". Of the non-Christian sects, 155,614 or 1·50 p.c. were Jews, 24,087 or 0·23 p.c. were Confucians, 15,784 or 0·15 p.c. were Buddhists and 5,008 or 0·05 p.c. were pagans. The figures in the following tables are revised and final. In Table **22** the totals for each religion are brought together for all censuses since Confederation; Table **23** gives the same information as Table **22** in the form of percentages to total populations for the census years; Table **24** gives the 1931 census figures of the numbers of persons accredited to each of 31 specified religions, by provinces.

[1]Including Tunkers. [2]Practically all Methodists and Congregationalists and a large number of Presbyterians united to form the United Church of Canada in 1925, although a relatively small number reported themselves as "United Church" in 1921, chiefly in Western Canada where the movement towards union began. [3]In earlier censuses only small numbers were involved, and Greek Catholics and Greek Orthodox were included under the general term "Greek Church". A rapid increase of both Greek Catholics and Greek Orthodox has been shown for recent censuses and, since the former owe obedience to the Pope in matters of faith, they have been included with the Roman Catholics for 1931. [4]Including 186,654 Greek Catholics, see footnote 3. [5]Included with "all other" religions for 1891. [6]The figures for 1871 cover the four original provinces of Canada only. [7]Mennonites were included with Baptists prior to 1901.

In 1931, for the first time in the history of the Dominion Census, the religions of the people were cross-classified according to racial origin. The results, for Canada as a whole, are shown in Table **25.**

It is seen from the information there given that in Canada the Anglican, the Baptist, the Presbyterian and the United Church of Canada derive the great proportion of their support from the British races. More than 61 p.c. of those of British race are members either of the United Church of Canada or are Anglicans.

The Roman Catholic Church not only derives very strong support from the French Canadians of Quebec province, where 91·42 p.c. of the population are members of that Church, but also from other continental European races. For instance, such important racial elements in the Canadian population as the Ukrainian, the Polish and even the German have nearly 70 p.c., over 85 p.c. and nearly 23 p.c. of their respective populations reported as Roman Catholic, while such lesser elements, as the Austrian, the Hungarian and the Yugoslavic have over 67 p.c., over 72 p.c. and 76 p.c., respectively, members of the same religion. The Russian element, which ranks between these two groups in numbers, has over 28 p.c. of its people Roman Catholic.

Among the Protestant denominations of the continental European races, the Lutheran ranks very high among the German, the Norwegian, the Swedish and the Finnish elements.

Classified by Racial Origin, 1931.

Section 7.—Birthplaces.

The birthplaces of the population of Canada, as at each of the seven censuses, are shown by Canadian born, British born, and foreign born, (United States born and other foreign born) in Table **26.** The table shows that, in 1871, 97·28 p.c. of the population was born under the British flag, while, sixty years later, the percentage had declined to 89·18. The proportion of Canadian born increased steadily until the opening of the century, but has declined as a result of the increase of immigration after 1900. The Census of 1931 shows declines in the proportions of British born and United States born as compared with 1921 but a substantial increase in the percentage of "other foreign born". The proportion of Canadian born has remained practically unchanged.

Worthy of note is the fairly steady increase of the United States-born population from 1·85 p.c. in 1871 to 4·25 p.c. in 1921, and the subsequent decline to 3·32 p.c. in 1931. Other foreign born increased from 0·87 p.c. in 1871 to 6·23 p.c. in 1911, declined to 5·87 p.c. of the total population by 1921 but, as already noted, increased substantially to 7·50 p.c. by 1931.

26.—Birthplaces of the Population of Canada, According to the Censuses of 1871-1931.

[1]Includes some hundreds of persons born at sea. [2]Revised since the publication of the 1933 Year Book.

The birthplaces of the 1931 population are indicated by sex in Table 27, for the various provinces and territories. In the Maritime Provinces, the population is shown by the census to be about 93 p.c. native born, and in Quebec about 91 p.c. In Ontario, however, the proportion sinks to about 77 p.c., in Manitoba to about 66 p.c., in Saskatchewan to about 65 p.c., in Alberta to about 58 p.c., and in British Columbia to about 54 p.c. The general tendency over the past decade has been for the proportion of the native-born population to remain stationary or show a slight decrease in Eastern Canada, but in Western Canada increases are everywhere shown; thus, the percentages in 1921 were: Maritime Provinces 93, Quebec 92, Ontario 78, Manitoba 64, Saskatchewan 60, Alberta 54 and British Columbia about 50. The proportion of foreign born has naturally decreased in the western provinces as a result of the limited immigration of recent years.

About 44 p.c. of the total British-born population is in Ontario, but the greatest proportion of British-born population in any one province is in British Columbia, *viz.*, 27 p.c., which compares with 31 p.c. for 1921. The foreign-born element reaches its maximum percentage in the rapidly growing provinces of Saskatchewan and Alberta, where it constitutes about 24 p.c. and 27 p.c. of the respective populations as compared with 26 p.c. and 30 p.c. respectively for 1921.

The birthplaces together with the percentage increases in the decades 1901-31 and the percentage distribution in the census years 1911-31 are shown in Table 28. All the nine provinces show percentage increases with the exception of Prince Edward Island, where the native born have decreased since 1891. Of the foreign countries, Yugoslavia shows the largest percentage increase during the last decade, with 779 p.c., while the United States, which has always shown an increase in former censuses, decreased 7·87 p.c. between 1921 and 1931.

28.—Birthplaces and Percentage Distributions of the Populations of Canada, Censuses 1911-31, together with Percentage Increase in each Decade, 1901-31.

NOTE—The sign (—) denotes a decrease.

[1]Included with Russia.

In Table **29** the native-born population is classified by province of residence according to the province of birth. The province showing the smallest emigration to other provinces is Quebec, with 94·28 p.c. of its native born still resident within the province, and therefore only 5·72 p.c. of those born within its borders living in other parts of Canada. Of this 5·72 p.c., 3·43 p.c. reside in the neighbouring province of Ontario (largely in counties along the Ottawa river and in northern Ontario). The next province as regards largest percentage of its native born still resident within the province is British Columbia with 94·13. There has commonly been a strong tendency for the native born of the eastern provinces to migrate to the West, although in more recent times Ontario has drawn a fairly large number from the West.

Nativity of Parents.—Of the 10,376,786 persons residing in Canada in 1931 there were 54·12 p.c. with both parents Canadian born; 18·88 p.c. with both parents British born; 15·99 p.c. with both parents foreign born; 6·12 p.c. with one parent Canadian born and one parent British born; 3·76 p.c. with one parent Canadian born and one foreign born and 0·97 p.c. with one parent British born and one parent foreign born. It is worthy of notice that 69,468 persons born outside of Canada but living in Canada had both parents Canadian born. This is probably due to persons born in the United States of Canadian-born parents. Table **30** gives the nativity of parents by provinces.

[1]Totals for Canada include data for Yukon and the Northwest Territories.

Canadian Born, by Racial Origin and Nativity of Parents.—Table 31 gives the racial composition of the Canadian-born population classified according to the nativity of parents, 1931. Not counting aborigines, among whom a very high proportion of Canadian parentage is naturally to be found, the Canadian born of French origin have the largest number (2,718,318), with both parents Canadian born; this is in excess of the total British races under the same category, and expressed as a percentage to total Canadian born of French origin was no less than 95·36. Of the British races the Irish have the highest percentage with both parents Canadian born (66·43 p.c.). It is to be noted, however, that in the case of the British races there are very much higher proportions than for other races in the class "one parent Canadian, other British". The Canadian born with both parents foreign are most numerous among those of the German and Ukrainian races but relatively, *i.e.*, on a percentage basis, they are highest among the Chinese and Japanese, the Finnish, the Hungarians, the Ukrainians, the Czechs and Slovaks, the Hebrews and the Austrians in the order named. All these have over 80 p.c. of their numbers with both parents foreign born; the maximum proportion is reached in the case of the Chinese and Japanese with 92·03 p.c.

Third generation Canadians, or those Canadian born both of whose parents are Canadian born, are most numerous, absolutely, among the French, English, Irish, Scottish, German and Dutch respectively, and, relatively, among the Indians and Eskimos, the French, the Dutch, the Irish, the Scottish and the English respectively.

Population, other than Canadian Born, by Year of Arrival.—Table 32 shows the number of people born outside Canada by year of arrival. Of those whose years of arrival were given, 32 p.c. entered Canada in the ten-year period 1921-31 and 29 p.c. in the previous decade, while nearly 39 p.c. reported a date prior to 1911. It may also be noted that 255,379 of all those born elsewhere than in Canada had been in Canada 30 years or more at the time of the Census of 1931.

This section of the population residing in Canada in 1931 was distributed geographically as follows: Maritime Provinces 3·0 p.c., Quebec 10·9 p.c., Ontario 34·9 p.c., Prairie Provinces, 47·3 p.c.; British Columbia 13·9 p.c. Of those born outside Canada and residing in the Maritime Provinces, 41·8 p.c. were classified as rural and 58·2 p.c. as urban; for Quebec, only 9·6 p.c. were rural and 90·4 p.c. were urban; proportions in Ontario were 27·2 p.c. and 72·8 p.c., respectively; in British Columbia, 41·8 p.c. were rural and 58·2 p.c. urban; in the Prairie Provinces, on the other hand, 60·26 p.c. were rural and 39·74 p.c. urban. Thus it is seen that while less than 10 p.c. of the "other than Canadian born" in the province of Quebec were rural, over 60 p.c. were so classified in the Prairie Provinces. The other provinces fall between these extremes.

[1]This column includes Northwest Territories and Yukon. [2]These totals include relatively small numbers who did not state the years of their arrival.

Section 8.—Citizenship and Naturalization.

At the last four decennial censuses, those of 1901, 1911, 1921 and 1931, inquiry has been made into the citizenship of the foreign-born population. The relevant instructions to enumerators at the Census of 1931 were as follows:—

"The term 'Canadian' should be used as descriptive of every person whose home is in the country and who has rights of citizenship in Canada. Every person born in Canada should be entered as 'Canadian' unless he or she has subsequently become the citizen of another country. Similarly any person born in the United Kingdom or in any of the British Dominions or dependencies, who has not subsequently become the citizen of another country, and who is now permanently domiciled* in Canada, should be entered as 'Canadian'. Similarly also, any person born in the United States, France, Germany or any other foreign country, but whose home is now in Canada, and who has become a naturalized citizen of Canada, should be entered as 'Canadian'.

"An alien person should be classed . . . as of the nationality or citizenship of the country to which he or she professes to owe allegiance.

"A married woman is to be reported as of the same citizenship as her husband.

"A foreign-born child under 21 years of age is to be reported as of the same citizenship as the parents.

"The law of Canada relating to nationality is contained in the Immigration Act, (Chapter 93, Revised Statutes of Canada, 1927) under which a 'Canadian' by nationality is defined as—

"(I) A person born in Canada who has not become an alien;

"(II) A British subject who has Canadian domicile;*

"(III) A person naturalized under the laws of Canada who has not subsequently become an alien or lost Canadian domicile.*

" . . . Following the participation of Canada in the Treaty of Versailles and in membership of the League of Nations, Canadian nationality was defined by Act of Parliament ('An Act to define Canadian Nationals and to provide for the Renunciation of Canadian Nationality', Chapter 21, Revised Statutes of Canada, 1927), as including:—

"(a) any British subject who is a Canadian citizen within the meaning of the Immigration Act, Chapter 27 of the Statutes of 1910 as heretofore amended.

"(b) the wife of any such person;

"(c) any person born out of Canada, whose father was a Canadian National at the time of that person's birth, or with regard to persons born before the passing of this Act, any person whose father at the time of such birth possessed all the qualifications of a Canadian National as defined in this Act.

"In connection with the last paragraph it should be noted that a child of Canadian parents domiciled in a foreign country retains Canadian nationality up to the age of 21 years, and should he become domiciled* in Canada prior to that age does not require to be naturalized.

"It is proper to use the term 'Canadian' . . . when the information furnished by the individual conforms to the foregoing definitions and explanations."

Table 33 deals with the citizenship of the Canadian born, the British born and the foreign born of the population residing in Canada at the date of the Census of 1931. As regards the total (8,069,261) native-born population, 8,052,459 were "Canadian Nationals" and were made up of 8,051,142 persons with uninterrupted citizenship and 1,317 naturalized repatriates. Of the total native born resident in Canada at the date of the census, 16,802 were aliens owing their allegiance to some foreign country—in the case of females usually as a result of marriage. The table also shows that of this number (16,802) of Canadians of alien nationality, 5,991 owed allegiance to various European countries, 286 to Asiatic countries and 10,477 to the United States.

The second part of the table shows that of the total number (1,184,830) of British born in Canada on June 1, 1931, all were not "Canadian Nationals" within the meaning of the Immigration Act already quoted, there being 135,426 who had

*Canadian domicile can only be acquired for the purposes of the Immigration Act by a person having his domicile for at least five years in Canada after having been landed therein.

not acquired domicile and who were liable to certain disabilities. Many of these however may exercise the rights of citizenship in Canada as provided by Sec. 4 of The Dominion Franchise Act (c. 51 of the Statutes of 1934).

The nationality of the foreign-born population is classified according to their country of birth. The third part of the table shows that in a large measure persons of foreign birth have either become Canadian subjects or have retained allegiance to the country of their birth. While this is generally true, yet in some instances the country of birth of the European population does not indicate their nationality. For example, of the total number of persons (17,033) born in Belgium 8,465 were of Canadian nationality, while of the remainder (8,656) claiming Belgian nationality only 8,258 were born in Belgium, leaving 259 born in contiguous countries—France, Germany, or Holland, while 114 were born in the United States.

[1]This column includes foreign-born persons born in places other than continental Europe, Asia or the United States.

The Progress of Naturalization.—The foreign-born residents of Canada numbered 1,122,695 in 1931 as compared with 890,277 in 1921, 752,732 in 1911 and 278,449 in 1901; among these the naturalized numbered 614,971 in 1931, 514,179 in 1921, 344,557 in 1911 and 153,908 in 1901, or 54·78 p.c., 57·75 p.c., 45·77 p.c. and 55·27 p.c. respectively. Alien residents in Canada showed an absolute decline between 1911 and 1921 of from 408,175 to 376,098, *i.e.*, from 5·66 p.c. of the population to 4·28 p.c. Between 1921 and 1931, they increased to 507,724, or 4·89 p.c. of the 1931 population. Among the foreign-born residents of Canada, the United States born exceed those born in any other country, although by continental groups the Europeans are more numerous. Between 1921 and 1931 the U.S. born declined from 374,022 to 344,574, but there was a substantial net increase in the total foreign born due to the large increase of Europeans. On the other hand, the percentage of the U.S. born who are naturalized to total U.S. born has increased from 63·63 in 1921 to 72·44 in 1931, whereas the percentage of continental Europeans who are naturalized has fallen from 57·88 in 1921 to 49·13 in 1931.

Table **34** gives details of the naturalized and alien persons among the foreign-born residents of Canada. The table is divided into pre-war and post-war sections and, while the general totals are comparable throughout the thirty years, the individual totals for those European countries whose boundaries underwent change following the War are not comparable as between the 1901-11 and 1921-31 periods.

34.—Numbers and Percentages of Naturalized and Alien Persons Among the Foreign Born Residents of Canada, by Countries of Birth, 1901, 1911, 1921 and 1931.

Section 9.—Language Spoken and Mother Tongue.

Official Languages.—In the Census of 1931 1,322,370 persons were reported as speaking both the official languages of Canada, 6,999,913 speaking English, 1,779,338 speaking French and 275,165 as unable to speak either English or French. In Table **35** the population is classified by racial origin and as able to speak one, both or neither of the official languages. (Children under 5 years of age are classed as speaking the language of the home.)

Mother Tongue.—By mother tongue is meant the language learned in childhood and still spoken by the individual. In the case of foreign-born persons it is the native language or the language spoken before coming to Canada. Table **36** giving the mother tongue by provinces shows that 1,630,086 persons did not have either English or French as a mother tongue. The largest number speaking a foreign language as a mother tongue is in Ontario with 398,476 but the largest percentage is in Saskatchewan with 39 p.c.

35.—Population of Canada Speaking One, Both or Neither of the Official Languages of Canada, Classified by Racial Origin, 1931.

NOTE.—Children under 5 years of age have been classed as speaking the language of the home.

[1] Including Yukon and Northwest Territories.

Section 10.—Rural and Urban Population.

For the purposes of the census the population residing in cities, towns and incorporated villages has been defined as urban, and that outside of such localities as rural. Thus the distinction here made between 'rural' and 'urban' population is a distinction of provincial legal status rather than of size of aggregations of population within limited areas. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban (the laws of Saskatchewan, for example, making provision that 50 people actually resident on an area not greater than 640 acres may claim incorporation as a village, while the Ontario law now requires that villages asking for incorporation shall have a population of 750 on an area not exceeding 500 acres), the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion, as far as comparable aggregations of population are concerned.

In order to have closer comparison between provinces, Table **37** divides the incorporated urban centres into two groups, *viz.*, under one thousand, and one thousand and over. The population in urban places having less than one thousand has decreased for the whole of Canada but increased in Prince Edward Island, Nova Scotia and British Columbia. The largest numerical increase in urban centres of 1,000 and over was in the province of Quebec with 480,000, but the largest percentage increase was in British Columbia with 59·13 p.c.

In Tables **38** and **39** are given statistics showing the growth of rural and urban population respectively, by provinces, since 1891. To a limited extent, however, Table **40** will permit the student of population statistics to make, at least for Canada as a whole, his own line of demarcation between rural and urban populations.*

*In the United States, urban population, prior to 1930, was classified by the Census Bureau as that residing in cities and other incorporated places having 2,500 inhabitants or more with certain minor qualifications, but in 1930 the definition was slightly modified to include townships and other political divisions, not incorporated as municipalities, having a total population of 10,000 or more each, and a population density of 1,000 or more per square mile. The direct result of this modification has been to slightly increase the proportion of urban population.

While a summary comparison between urbanization in Canada in 1931 and in the United States in 1930 would lead us to the conclusion that our country, though far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, *viz.*, 53·70 p.c. in Canada as compared with 56·2 p.c. in the United States, the fact that in the United States inhabitants of places having under 2,500 population are included with rural population must be taken into account. A fairer basis of comparison is secured if the same population limits are taken for both countries, as may be done by using Table **40**. Thus, at the Census of 1930, the United States had 29·5 p.c. of its population resident in cities of 100,000 and over, while Canada in 1931 had only 22·44 p.c. of its population in such places. The United States had an additional 18 p.c. of its population residing in cities of between 10,000 and 100,000 population, and 4·8 p.c. in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 14·87 p.c., and 4·42 p.c. respectively of its population. Thus, taking all places of 5,000 and over—the lowest population for which comparative figures are readily available —52·3 p.c. of the population of the United States resided in such places as compared with 41·73 p.c. of the population of Canada, showing the much higher degree of urbanization which has been reached in the United States—a natural thing in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table **38** that in the last decade, as in the previous one, urban communities absorbed nearly 77 p.c. of the total increase in population, with the result that the urban population of Canada in 1931 exceeded the rural by 767,330. Out of every 1,000 persons in the country, 463 were resident, on June 1, 1931, in rural and 537 in urban communities, as compared with 505 in rural and 495 in urban communities on June 1, 1921; 546 in rural and 454 in urban communities in 1911; 625 in rural and 375 in urban communities in 1901; and 682 in rural and 318 in urban communities in 1891.

From Table **40**, showing the distribution of urban population in Canada by size of cities and towns, it is seen that Canada possesses two cities of more than half a million population. These are Montreal and Toronto, with 818,577 and 631,207 inhabitants respectively. Two other cities, Vancouver and Winnipeg, have attained the 200,000 mark and Hamilton, Quebec and Ottawa each have populations of over 100,000. The two western cities of Calgary and Edmonton are now in the 75,000 to 100,000 class. In this respect London, which excelled Edmonton in 1921, now takes the next lower place with a population of 71,148. Details of the population of these and other smaller cities and towns of 5,000 and over, are given by censuses from 1871 to 1931 in Table **41**, while the populations of urban communities having in 1931 a population of from 1,000 to 5,000 each, are given for 1901, 1911, 1921 and 1931 in Table **42**.

All the larger cities have in their neighbourhoods growing "satellite" towns or other densely settled areas in close economic relationship with the central municipality. This phenomenon is to-day of increasing importance largely as a result of the greater ease and speed of transportation by motor vehicle. It has therefore been considered advisable to calculate the total populations resident in what the United States census authorities call the "metropolitan areas". On this basis the total populations of the larger cities at the Census of 1931 were as follows: "Greater Montreal", 1,000,157; "Greater Toronto", 808,864; "Greater Vancouver", 308,340; "Greater

Winnipeg", 280,202; "Greater Ottawa" (including Hull), 175, 988; "Greater Quebec", 166,435; "Greater Hamilton", 163,710; "Greater Windsor", 110,385; "Greater Halifax", 74,161; and "Greater Saint John", 55,611.

38.—Rural and Urban Populations, by Provinces and Territories, Decennial Censuses 1891-1931 and Numerical Increases 1921-1931.

[1]The population (98,967) in territory now comprised in the provinces of Alberta, Saskatchewan and in Yukon and the Northwest Territories was classified as rural in the Census of 1891. [2]Vol. 1, Census 1911, places the urban population of Alberta for that year at 141,937. Included in this figure was the population (5,250) of twelve places which, according to the Report of the Municipal Commissioner for Alberta, were not then incorporated. The places so included were Aetna, Bankhead, Bellevue, Bickerdike, Canmore, Cardiff, Exshaw, Hillcrest, Passburg, Queenston and Elmpark. The correction resulting from this and from other small adjustments consequent upon more definite knowledge as to incorporated areas, places the urban population for 1911 at 137,662. Similar corrections have been made in the urban and rural figures for the Census of 1901. [3]As corrected in Census Report, Prairie Provinces, 1916. [4]As changed by Extension of Boundaries Act, 1912. [5]As changed by Extension of Boundaries Act, 1912. [6]The urban population of 970,791, shown in Volume 1, Census 1911, is reduced to 966,842 by the transfer of the populations of Maniwaki, Martinville, Moisie, St. Bruno, St. Martin and St. Vincent de Paul from urban to rural; by adjustments in area of the villages of St. Anne and Ste. Geneviève; and Extension of Boundaries Act, 1912. [7]Urban and rural populations for 1911 and 1901 are as corrected in Census Report, Prairie Provinces, 1916. [8]As reduced by Extension of Boundaries Act, 1912. [9]Members of the Royal Canadian Navy were counted at their homes in the Census of 1931. [10]This includes South Vancouver and Point Grey, with 1921 populations of 32,267 and 13,736 respectively, which were then classified as 'rural'.

39.—Percentage Distribution of Rural and Urban Populations, by Provinces and Territories, 1891, 1901, 1911, 1921 and 1931.

NOTE.—In using this table, reference should be made to the notes appended to Table 38 showing rural and urban population by numbers.

Population is shown in Table **40** to be increasingly attracted to the larger cities. Thus, not only have cities of over 500,000 population (Montreal and Toronto) increased their proportions to the total, but cities of from 100,000 to 500,000 have increased their aggregate population from 5·90 p.c. of the total to 8·46 p.c., and cities of between 5,000 and 100,000 from 17·68 p.c. to 19·29 p.c. in the decade 1921-31. The classes below 5,000 show slight proportional reductions.

41.—Populations of Cities and Towns having over 5,000 Inhabitants in 1931, Compared with 1871-81-91-1901-11-21.

NOTE.—The cities and towns in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been rearranged as far as possible to cover the same area as in 1931.

Rural and Urban Farm Populations.—Of the 10,362,833 people who form the population of the nine provinces of Canada, exclusive of the Territories, only 3,289,507 or 31·7 p.c. live on farms.

There are 728,623 farms within the nine provinces and, considering the 14,056 farms (see Table **43**) which are located within the limits of incorporated cities, towns or villages as "urban", the farm population is classified as 3,224,241 living on rural farms and 65,266 on urban farms. More than one half (50·5 p.c.) of the people on urban farms are in Quebec and only 23·6 p.c. in Ontario. Alberta ranks third with 6·4 p.c. and Nova Scotia fourth with 5·7 p.c. This is in contrast with the distribution on rural farms where 24·4 p.c. are in Ontario, 23·1 in Quebec, 17·4 in Saskatchewan and 11·5 in Alberta; these four provinces therefore have 76·4 p.c. of the rural farm population. The rural and urban farm populations bear a very close relationship to the number of farms of each class in the individual provinces but the distribution of rural farms follows more closely the distribution of total population (see Table **1**) than that of urban farms. Among the provinces, Quebec has the greatest number of persons per farm on farms of both the rural and urban classes.

Table **43** gives the number of farms and the farm populations, urban and rural, by provinces as recorded at the Census of 1931.

43.—Rural and Urban Farms, Farm Populations and Average Numbers of Persons per Farm, by Provinces, 1931.

Details regarding farm workers and those farms employing hired labour, the period of employment and cost of wages and board, are dealt with in Chapter VIII —Agriculture. The reader is referred to Table **44**, p. 299 for this information.

Section 11.—Literacy.

Literacy in Canada has shown most encouraging progress since the opening of the twentieth century.

In 1901, 14·38 p.c. of the population of five years of age and over could neither read nor write; the corresponding percentage for 1911 was 10·50; for 1921, 9·25; and for 1931 it was only 7·18. (See Table **44.**)

44.—Ability to Read and Write of the Population 5 Years of Age and Over, by Provinces, for each Census Year 1901-31.

Literacy of Population over Ten Years of Age, by Age-Groups and Sex.—Experience has shown that statistics of literacy among children under ten years of age are practically meaningless. A truer test of progress has been made by taking the statistics for the population of ten years of age and over, but, unfortunately, this comparison cannot be made for earlier censuses than that of 1921. Table **45** shows literacy, by sex and province, of persons ten years of age and over in 1931, and the percentage of illiterates in this significant section of the population was 3·79 p.c. in 1931, as compared with 5·10 p.c. in 1921. It will be noticed that illiteracy is very definitely greater among males than among females. In 1931, 4·32 p.c. of the male population and 3·21 p.c. of the female population were recorded as unable to read or write, as compared with 5·73 p.c. and 4·43 p.c. respectively for 1921. Manitoba, Saskatchewan and Alberta, alone among the provinces, show a higher percentage of female illiteracy; this condition existed also in 1921, although the corresponding percentages for both males and females were then substantially greater, being: Manitoba, males 6·48, females 7·78; Saskatchewan, males 5·00, females 7·08; Alberta, males 4·62, females 5·92.

The figures show that New Brunswick is in the most unfavourable position, though there has been an improvement since 1921. No less than 6·91 p.c. of the population of that province—8·75 p.c. of the males and 4·97 p.c. of the females—could neither read nor write in 1931. For 1921 the figures were: total illiterate, 7·61 p.c.; males 9·24; females 5·90. On the other hand the province of Quebec, which in 1921 recorded the high percentage of 6·19 (7·84 males and 4·54 females) as illiterate, had reduced this proportion to 4·76 (6·21 males and 3·29 females) by 1931.

45.—Literacy of the Population of 10 Years of Age and Over, by Sexes and Provinces, 1931.

(Corresponding figures for 1921 are to be found in the 1924 Year Book, p. 131.)

Literacy among Urban Populations.—Table **46** shows the literacy of persons residing in cities with populations of 30,000 and over in 1931. The final three columns give percentage figures for persons ten years of age and over, and a comparison with figures for 1921 shows that very definite changes have taken place in the literacy of urban populations. Toronto had, in 1921 as in 1931, a very low percentage of illiteracy—1·68 p.c. in 1921 and 1·26 p.c. in 1931—and the larger cities of Ontario, generally, made a comparatively good showing in 1921. Other large cities of Canada had, in 1921, fairly high percentages of illiteracy, the figures being: Montreal, 3·60 p.c.; Winnipeg, 3·54 p.c.; Vancouver, 3·54 p.c.; Quebec, 3·27 p.c.; Ottawa 2·69 p.c.; and Hamilton, 2·12 p.c. Comparison of 1921 figures* with those for 1931 in Table **46** brings out the great improvement in the western cities. Marked betterment is evident throughout the list, but the exceptional progress in the west has put Three Rivers, Quebec, Montreal and Halifax in a relatively less favourable position as regards literacy. While Three Rivers has still the highest percentage of persons who can neither read nor write, the proportion has been reduced from 7·03 p.c. in 1921 to 3·45 p.c. in 1931.

The city of Saskatoon, Saskatchewan, had the lowest percentage of illiteracy in 1931, *viz.*, 0·71, London, Ontario, being next with 0·88 p.c. In the cities of Windsor, Ontario, and Regina, Saskatchewan, both of which had low percentages of illiterates in 1921 (1·53 p.c. and 1·44 p.c. respectively), slight increases to 1·78 p.c. and 1·68 p.c., respectively, are shown in 1931.

*See p. 133 of the 1924 Year Book.

Section 12.—School Attendance.

The census statistics of school attendance for the population between the ages of 5 and 19 years are presented for 1911, 1921 and 1931 in Table **47** for Canada as a whole. In comparing the statistics of school attendance for the Census of 1931 with those of 1921 and 1911, it is necessary to take into account the fact that in 1931 and 1921, the question as to school attendance covered the nine months ended May 31, while in 1911 the question covered the calendar year 1910. For this reason the figures are not quite comparable, although the general trends as shown by the percentages in the lower part of the table are probably not materially affected.

In 1931 the population of school age, 5-19 years, numbered 3,246,391 or 31·3 p.c. of the total population, as compared with 31·4 p.c. in 1921 and 30·0 p.c. in 1911. The proportion of the total group 5-19 years actually in attendance at school shows progress. In 1911 only 52·88 p.c. of the population of this age were in attendance at school; the proportion rose to 61·33 p.c. in 1921 and 65·59 p.c. in 1931. The proportion of males between these ages attending school increased from 52·15 p.c. in 1911 to 60·80 p.c. in 1921 and 65·12 p.c. in 1931; that of females from 53·63 p.c. in 1911 to 61·86 p.c. in 1921 and 66·08 p.c. in 1931.

Table **48** gives the school attendance by provinces for the rural and urban populations, classified by sex and months at school. Table **49**, giving the school attendance of Canadian born, British born and foreign born, shows that, of the 1,755,348 children 7 to 14 years of age in Canada (Territories excluded), 93·09 p.c. attended school. The "not at school" was largest for the foreign born with 7·81 p.c. followed by the Canadian born with 6·97 p.c. and British born with 3·95 p.c.

Section 13.—Annual Estimates of Population.

While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern States for many purposes, such as the calculation of birth, death and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of post-censal populations are adopted. For example, it is possible, with good vital statistics and records of arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and substracting deaths and departures during the period elapsed since the census. This method is impracticable for Canada, on account of her 4,000 miles of common boundary line with the United States, crossed every day by many thousands of people in both directions. In almost all civilized countries, the actual methods of making the estimates vary. Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the last quinquennial or decennial inter-censal period. In the case of Canada annual figures of population have been purely estimates, made on the basis of past increases, prior to the Census of 1931. They have now been worked out on a basis which takes into consideration collateral data back to 1867, and the resulting figures are believed to more accurately state the populations at inter-censal periods than any before published.

The new method upon which calculations are based was described at pp. 108-109 of the 1932 Year Book.*

*The table of estimates on p. 164 and the description of the method upon which calculations are based are the work of M. C. MacLean, M.A., F.S.S., Chief of Census Analysis, Dominion Bureau of Statistics.

50.—Estimates of the Populations of Canada for Inter-Censal Years, by Provinces, 1867-1934.

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figure.

Section 14.—Area and Population of the British Empire.

Since the War the boundaries of the British Empire have been contracted by the voluntary retirement from Egypt in 1922 and expanded by the addition of various territories under mandate as a result of the Treaty of Versailles. The increases of territory were mainly in Africa, where the Tanganyika Territory, Southwest Africa, and portions of the Cameroons and Togoland, with an aggregate area of 736,000 square miles and an estimated population of over 5,000,000 (1921) came under Empire control. In Asia, the territories acquired by mandate from the League of Nations include Palestine and Transjordania, with 1,335,821 inhabitants on an area of 25,802 square miles. In the Pacific, the territories added to the Empire include Western Samoa, the Territory of New Guinea, the Bismarck archipelago and part of the Solomon islands, all of which were formerly German possessions. According to the most reliable estimates, the total area of these regions is 92,141 square miles and the population 445,650.

Statistics of the areas and populations of the territories included in the British Empire in 1931 are given in Table **51,** together with comparative figures of population for 1921 and 1911.

51.—Area and Population of the British Empire, by Continents and Countries, 1911, 1921 and 1931.

NOTE.—The source of the following figures is the "Statistical Abstract for the British Empire, 1931" except in the case of Canada, where the data are the latest census figures, and Transjordania, see footnote 23. Totals have been adjusted as far as possible.

		Census of 1911.	Census of 1921.	Census of 1931.
Summary by Continents.				
Europe	120,791	45,549,583	47,443,549	49,369,087
Asia	1,988,429	323,386,386	329,361,760	364,566,164
Africa	3,833,275	38,244,040	49,783,112	56,447,532
North and Central America and West Indies	3,991,262	9,197,207	10,845,161	12,760,033
South America	95,098	299,316	301,122	314,034
Oceania	3,288,928	6,187,152	7,331,210	9,013,298
Totals (approx.)[29, 30]	**13,318,000**	**422,863,684**	**445,065,914**	**492,470,148**
Details by Countries.				
United Kingdom	93,991	45,222,000[1]	47,123,000[1,2]	46,042,000[2]
Self-governing Dominions—				
Canada	3,694,900[3]	7,206,643	8,787,949	10,376,786
Australia[4]	2,974,581	4,455,005	5,435,734	6,448,707[6]
New Zealand[5]	103,415	1,008,468	1,218,913	1,442,746[6]
Union of South Africa	471,917	5,973,394	6,928,580	8,132,600[17]
Irish Free State[7]	26,601	3,139,688[7]	2,971,992[7]	2,957,000[6]
Newfoundland (including Labrador)	275,134	242,619	263,033	281,549[6]
Labrador	232,400	3,949	3,774	4,264[6]
India—				
Provinces	1,094,220	244,221,377	246,946,793	270,561,353
States and Agencies	711,032	70,888,854	71,939,187	80,838,527
Totals, India	1,805,252	315,110,231	318,885,980	351,399,880
Jersey	45	51,898	49,701	50,455
Guernsey and adjacent islands	30	45,001	40,529	42,6C6
Gibraltar[8]	1·9	19,120	18,061	17,405
Malta[8]	122	211,564	212,258	241,621
Cyprus[9, 10]	3,584	273,964	310,469	347,959
Gambia	4,002	146,101	210,530	199,520
Sierra Leone	31,000	1,403,132	1,541,311	1,672,057
Gold Coast[11]	78,450	1,503,911	2,110,454	2,869,750
Nigeria[11]	338,438	17,126,983	18,631,442[12]	19,158,338
Ascension	34	400[6]	250[6]	158
St. Helena[8]	47	3,477	3,666[6]	3,995

For footnotes see end of table, p. 167.

51.—Area and Population of the British Empire, by Continents and Countries, 1911, 1921 and 1931—continued.

Country.	Area in Square Miles.	Populations.		
		Census of 1911.	Census of 1921.	Census of 1931.
Details by Countries—continued.				
Southern Rhodesia	150,344	771,077	899,187	1,109,012
Northern Rhodesia	287,950	822,482[13]	983,539	1,345,075
Bechuanaland Protectorate	275,000	125,350	152,983	–
Basutoland	11,716	404,507	498,781	650,000[6]
Swaziland	6,704	99,959	106,961	125,055[6]
Zanzibar Protectorate	1,020	197,200[6]	209,214[6]	235,428
Kenya	221,089	2,402,863[14]	2,574,006[13]	3,040,940[13]
Uganda Protectorate	94,204[15]	2,843,325	2,921,608[13]	3,553,534[6]
Nyasaland Protectorate	47,949[16]	970,430	1,201,983	1,603,454
Somaliland Protectorate	68,000	344,323	347,000[6]	344,700[6]
Mauritius	720	368,791[9]	376,485[9]	393,238
Dependencies of Mauritius	89	6,690	8,394	9,659
Seychelles	156	22,691	24,523	27,444
Aden (including Perim)	80	46,165	56,500	50,809
Socotra	1,382	12,000[6]	12,000[6]	12,000[6]
British Malaya—				
Straits Settlements[18]	1,531	714,069	883,769	1,114,015
Federated Malay States	27,430	1,036,999	1,324,890	1,713,096
Unfederated Malay States—				
Johore	7,320	180,412	282,234	505,311
Kelantan	5,720	286,751	309,300	362,517
Trengganu	5,050	154,073	153,765	179,789
Kedah	3,640	245,986	338,558	429,691

Tobago	114	20,749	23,390	25,358
Totals, West Indies	12,611	1,688,493	1,728,735	2,022,562
British Honduras	8,598	40,458	45,317	51,347
British Guiana	89,480	296,041[21]	297,691[21]	310,933
Falkland islands[22]	5,618	3,275	3,431	3,101
Totals, British Possessions (approx.)[30]	**11,449,000**	**420,200,000**	**434,400,000**[12]	**478,880,000**

For footnotes see end of table, p. 167.

51.—Area and Population of the British Empire, by Continents and Countries, 1911, 1921 and 1931—concluded.

Country.	Area in Square Miles.	Populations.		
		Census of 1911.	Census of 1921.	Census of 1931.
Details by Countries—concluded.				
Mandated Territories—				
Palestine and Transjordania—				
Palestine	10,358	[28]	757,182[24]	1,035,821[25]
Transjordania[23]	15,444	[28]	[28]	300,000[6]
British Togoland	13,240	[28]	187,959	293,714
British Cameroons	34,081	[28]	660,024[26]	769,833
Territory of South West Africa	322,393	[28]	227,739	240,520[6]
Tanganyika Territory	366,632	[28]	4,123,493	5,063,660
Territory of New Guinea	91,000	[28]	[28]	396,958[27]
Nauru	8	[28]	2,120	2,692
Territory of Western Samoa	1,133	[28]	36,343	46,000[6]
Totals, Mandated Territories	**854,289**	[28]	**5,994,860**	**8,149,198**
Territories under Condominium—				
Anglo-Egyptian Sudan	1,008,100	2,706,954	4,853,000[6]	5,605,848[6]
New Hebrides	5,700	[28]	[28]	66,000[6]
Totals, Territories under Condominium	**1,013,800**	**2,706,954**	**4,853,000**	**5,671,848**
Grand Totals, British Empire (approx.)[29,30]	**13,318,000**	**422,906,954**	**445,247,860**	**492,621,046**

[1]Inclusive of the Irish Free State. See footnote 8.

[2]A census of Ireland was not taken in 1921 and 1931. The figures include the estimated population of Ireland at the middle of 1921 and of Northern Ireland at the middle of 1931.

[3]Inclusive of 226,979 sq. miles of fresh water.

[4]The population is exclusive of full-blooded aborigines, of which 61,801 were enumerated at a census taken on June 30, 1929.

[5]The area (293 sq. miles) and population (15,204 persons in 1931) of the Cook and other annexed islands are excluded, as are also the uninhabited "outlying islands" of an area of 307 sq. miles. The Maori population (69,141 persons in 1931), and the inhabitants of the Tokelau Islands Dependency (4 sq. miles—population 1,048 in 1931) are also excluded.

[6]Estimated figures.

[7]Population for 1911 relates to the area which is now the Irish Free State, and is included in the population figure shown for the United Kingdom for that year. The first census of the Irish Free State was taken in 1926 and the figures shown above under 1921 relate to that census.

[8]The population is exclusive of the military and persons on ships in harbours.

[9]The population is exclusive of the military.

[10]Cyprus, which had been administered by the United Kingdom under a Convention, dated June 4, 1878, was annexed on Nov. 5, 1914.

[11]Exclusive of the mandated areas.

[12]Inclusive of particulars for the mandated area of the Cameroons. Estimated population of this area in 1924 was 660,024.

[13]Partly estimated—a census of natives not being available.

[14]Population of administered provinces only.

[15]Inclusive of 13,616 sq. miles of water within the territorial limits of the Uganda Protectorate.

[16]Inclusive of 10,353 sq. miles of water within the territorial limits of the Nyasaland Protectorate.

[17]Estimated mean population—a census of Europeans only was taken in 1931.

[18]Inclusive of Christmas island, Labuan and the Cocos (or Keeling) islands. The military and the floating population are included in the population figures.

[19]The population (17,049 persons at the Census of 1921) of part of the New Territories (New Kowloon) are included with the figures for Hong Kong.

[20]The Gilbert and Ellice groups were placed under British protection in 1892. Ocean island was annexed to the protectorate in 1900 and Union islands in 1911. The protectorates were annexed on Nov. 12, 1915 and are now known as "Gilbert and Ellice Islands Colony". In 1916 Fanning island and Washington island were annexed to the Colony.

[21]Exclusive of aborigines estimated to number 9,700 at the Census of 1921.

[22]Including South Georgia.

[23]Transjordania is not included in the total of mandated territories shown in the "Statistical Abstract of the British Empire" and the figures have been taken from the League of Nations Year Book, 1932-33.

[24]Census of 1922.

[25]Census of Nov. 18, 1931.

[26]Estimated 1924.

[27]Inclusive of estimated figures of non-indigenous population.

[28]Cannot be stated.

[29]Includes Transjordania, see footnote 23.

[30]The totals, especially for population, can only be given approximately since certain of the figures are estimates of native populations, and in other cases data are not available.

Section 15.—Area and Population of the World.

Statistics showing the areas and the populations of the various continents, and details of each country, are presented in Table 52. There is a wide difference between the dates of the latest censuses of different countries and since the aim of bringing these statistics together is for comparative purposes, it was necessary to fix populations as at a common date. Dec. 31, 1931, was chosen because this is the closest date common to the chief census dates of the important countries and because estimates as at that date were available from reliable sources. This date is not sufficiently remote from the censuses to cause misgiving as to the accuracy of the figures simply because they are estimates. In a number of cases, notably in parts of Asia and Africa, the figures are not as accurate as they are, for instance, in the western world, since complete censuses do not everywhere exist, but the approximations given are considered to be the best available.

52.—Area and Population of the World, by Continents and Countries, 1931.

NOTE.—The source of the following figures is the "League of Nations Year Book, 1932-33" estimates as at Dec. 31, 1931, except in the cases of: the British Empire, where the source is the "Statistical Abstract for the British Empire, 1931" Dec. 31 estimates; of China proper where the source is the "Statesman's Year Book, 1933"; and of Manchuria where the source is the "Manchurian Year Book, 1933". The Continental and World totals have not been adjusted, but are as given in the League of Nations Year Book.

Country.	Population.	Area in Square Miles.
	000 omitted.	
Continents—		
Europe	510,350	4,412,000
Asia	1,105,400	16,178,000
Africa	143,400	11,566,000
North and Central America and West Indies	170,460	8,654,000
South America	84,956	7,055,000
Oceania	9,920	3,301,000
Grand Totals	**2,024,500**	**51,166,000**
Europe—		
Russia in Europe	128,800	2,316,200
Germany	64,776	181,100
United Kingdom (including Channel islands and isle of Man)	46,342	94,100
France	41,950	212,700
Italy (including Fiume)	41,477	119,700

[2]The Dec. 31, 1931, figures published in the "Statistical Abstract for the British Empire" give 10,506,000 as the population of Canada. That, however, is the official estimate for June, 1932 (see p. 164).

CHAPTER V.—VITAL STATISTICS.*

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.† In the beginning only one copy of such records was made, but in 1678 the Sovereign Council of Quebec ordered that in future such records should be made in duplicate, and that one copy, duly authenticated, should be delivered to the civil authorities. This arrangement was continued after the cession of the country to the British, and was extended to the newly-formed Protestant congregations of Lower Canada by an Act of 1795, but the registration among these latter remained seriously defective, both in Lower Canada and in the new province of Upper Canada.

In English-speaking Canada vital statistics were from the commencement incomplete, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. Although from 1847 a law existed in Upper Canada requiring ministers of religion to deposit duplicates of their registers of baptisms, marriages and deaths with the clerks of the peace for transmission to the Provincial Secretary, this law remained practically a dead letter. Again, the efforts made to secure records of births and deaths at the Censuses of 1851 and 1861 produced most unsatisfactory and even ridiculous results, as was pointed out by Dr. J. C. Taché, Secretary of the Board of Registration and Statistics, in a memorial published in the report of the Canadian Minister of Agriculture for 1865. Nevertheless, in spite of the inherent unsoundness of securing, at a point of time in a decennial census, a record of births and deaths occurring over a considerable period of time, this method was followed down to 1911, when the obviously untrustworthy character of the results led to the discarding of the data obtained at the inquiry.

The Dominion Government instituted in the early '80's a plan for compiling the annual mortuary statistics of cities of 25,000 population and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax and Saint John. By 1891 the list had grown to 25, at a time when, in most of the provinces, the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling and publishing the vital statistics of the Dominion. This resolution had no immediate practical results in securing accurate or comparable vital statistics.

Following Confederation each of the provinces of the Dominion had enacted its own legislation on vital statistics, where such existed, and administered this legislation according to its own individual methods. While the vital statistics of Ontario were published in considerable detail annually from 1871, the arrangements for the

*This chapter has been revised by W. R. Tracey, B.A., Chief, Vital Statistics, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Population".

†For a summary of the vital statistics of the Roman Catholic population from 1610 to 1883, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details, by years, of this movement of population, see Vol. V of the Census of Canada, 1871, pp. 160-265, and Vol. IV of the Census of Canada, 1881, pp. 134-145.

collection of data were unsatisfactory. Only in 1906 was the publication of vital statistics begun in Prince Edward Island (no report for 1912 was ever issued). In Nova Scotia no vital statistics were published between 1876 and 1908 and in New Brunswick no vital statistics were available until 1920. Because of the *lacunæ*, and even more because of the incomparability of information collected, of methods of collection and of standard of enforcement, Canadian vital statistics remained extremely unsatisfactory and impossible of compilation on a national basis, as was pointed out by the 1912 Commission on Official Statistics, which recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial and international comparisons. By effective co-operation of the provinces with the Dominion, this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements".

The scheme of co-operation thus outlined was brought into effect as a consequence of the establishment of the Dominion Bureau of Statistics under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics. A scheme was first drawn up in the Bureau and submitted to the various provinces; then Dominion-Provincial conferences on vital statistics were held in June and December, 1918, when comprehensive and final discussions took place.

At the conferences of 1918, it was agreed: (1) that the model Vital Statistics Act prepared by the Dominion Bureau of Statistics, when accepted by the Legislatures, should form the basis of the vital statistics legislation of the several provinces, thus securing uniformity and comparability; (2) that the provinces should undertake to obtain the returns of births, marriages and deaths on the prescribed forms as approved and adopted at the conference, the Dominion Bureau of Statistics to supply the forms free of charge; (3) that the provinces should forward to the Dominion Bureau of Statistics, at such times as might be agreed upon, either the original returns of births, marriages and deaths, or certified transcriptions of the same; the Bureau of Statistics to undertake the mechanical compilation and tabulation.

Under the scheme outlined above, the vital statistics for all the provinces except Quebec were secured and compiled on a uniform basis for the years 1921 to 1925. The annual reports for these years may be obtained on application to the Dominion Statistician.

Quebec has been included in the registration area as from Jan. 1, 1926, from which date her statistics are on a comparable basis with those of the other provinces. The final reports for 1926 to 1932, including the statistics of all the nine provinces, have appeared and may be procured from the Dominion Statistician.

The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this chapter because the figures are not regarded as complete, the details are in many cases not available, and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these territories contain less than 1/700th of the population of Canada, their vital statistics are a negligible factor in the total. Births, marriages and deaths in Yukon and the Northwest Territories, for the years 1924–32, are summarized in the statement herewith:—

VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES, 1924-32.

Year.	Yukon.			The Northwest Territories.		
	Births.	Marriages.	Deaths.	Births.	Marriages.	Deaths.
	No.	No.	No.	No.	No.	No.
1924	31	5	38	95	39	47
1925	22	17	63	57	35	32
1926	27	12	68	75	3	51
1927	29	19	33	126	20	133
1928	30	13	46	222	30	367

1931	40	24	66	141	36	106
1932	44	26	62	195	33	122

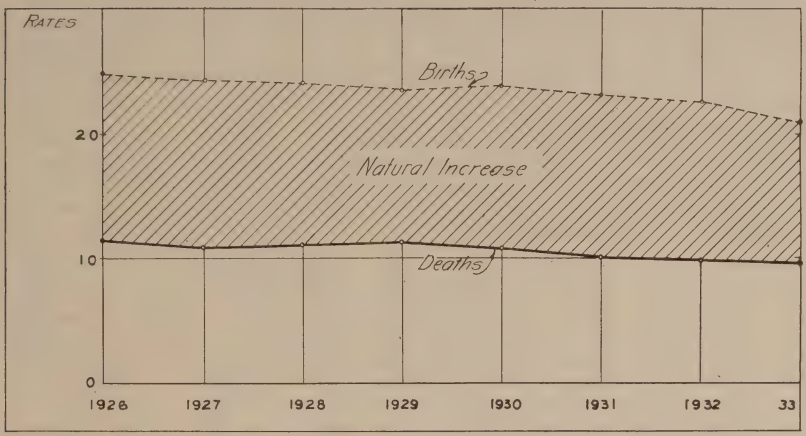
Two important considerations should be borne in mind by the students who use either the tables which follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. First, in spite of the improvements of the past decade, registration generally, and the registration of births in particular, is not universally carried out. The great extent of the country and the isolation of many of its inhabitants partly account for this unsatisfactory situation. Secondly, the very considerable differences in the age and sex distribution of the population in different provinces make comparisons of crude birth rates and crude death rates as among the provinces unfair and misleading. All rates in this chapter have been recalculated on the basis of the revised estimates of population given on p. 164.

The natural increase of the population of Canada is first dealt with, followed by detailed tables of births, marriages and deaths in the order named.

Section 1.—Natural Increase.

Summary statistics of the births, marriages, deaths and natural increase per 1,000 of population are given for the years 1921 to 1933, by provinces, in Table **1.**

The province of Quebec is regarded as having one of the highest rates of natural increase per 1,000 population of any civilized area. The rate was 17·1 in 1931 and, while it has been appreciably reduced in line with common experience almost everywhere, it stood at 15·2 in 1933. Saskatchewan, Alberta and New Brunswick follow Quebec in the order given. In the case of the two western provinces the high rates of natural increase are due to their relatively younger populations and lower crude death rates, but in the case of New Brunswick the condition of an abnormally high birth rate combined with a high death rate exists. In fact, the death rate in New Brunswick is higher than that of any other province. The high rates for these provinces brought the averages for Canada up to 13·3 in 1926, 13·4 in 1927, 13·0 in 1928, 12·2 in 1929, 13·2 in 1930, 13·1 in 1931, 12·6 in 1932 and 11·3 in 1933. The rate of natural increase in 1932 was 8·2 per 1,000 in Australia, 9·1 in New Zealand, 3·3 in England and Wales, 5·1 in Scotland and 4·4 in the Irish Free State, so that Canada compares quite favourably with other British countries.



The rates of natural increase per 1,000 of mean population for other countries in the latest years are as follows, the figures being for 1932, except where stated in parentheses: Denmark, 7·0; Japan, 15·2; Netherlands, 13·0; Norway, 5·4; Finland, 6·1; Italy, 9·1; Switzerland, 4·6; Sweden, 2·9; Spain, 10·1 (1931); France, 1·5; Belgium, 4·5; United States (registration area), 6·5; Union of South Africa (whites), 14·2.

During recent years the rate of natural increase of the population of Canada has shown a tendency to decline. In 1921 the rate was 17·8, declining to 13·3 in 1926 and 12·2 in 1929. After 1929 there was a temporary improvement but, as

BIRTH RATES, DEATH RATES AND RATES OF NATURAL INCREASE IN CANADA — 1926-1933 AND ITS PROVINCES - 1931-33

EXCLUSIVE OF THE NORTH WEST TERRITORIES AND YUKON

(RATES PER 1,000 POPULATION)

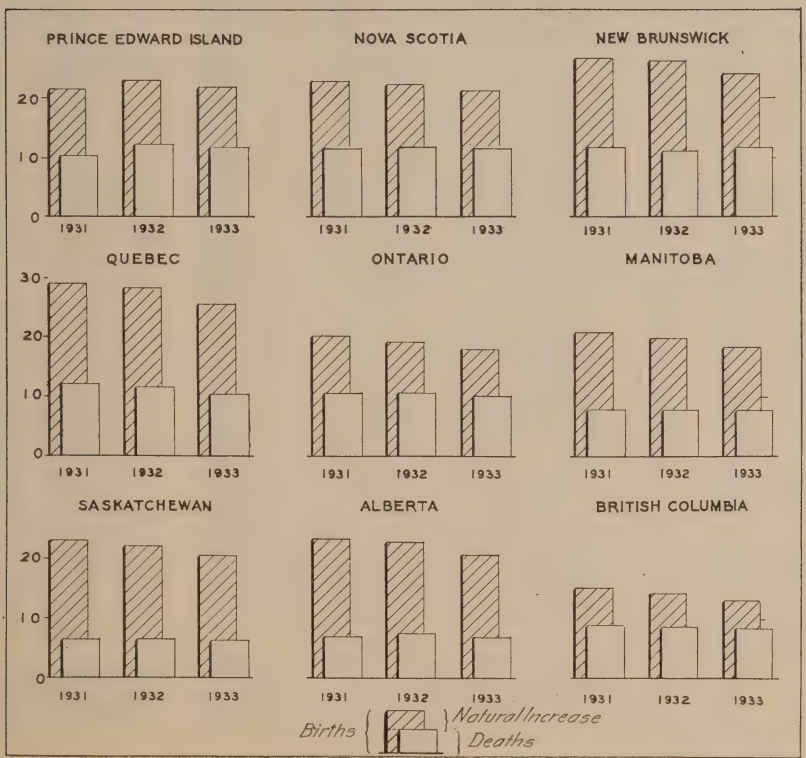


Table 1 shows, the rates for 1932 and 1933, 12·6 and 11·3 respectively, were a continuation of the downward trend.

Statistics of the births, marriages, deaths and natural increase in cities and towns of 10,000 and over are given for the calendar years 1931 and 1932 in Table 2, but these are not worked out as rates per 1,000 of population, though the census populations in 1931, which are also given, furnish some guide to the rates of natural increase. Particularly notable in this table are the larger proportionate numbers of births in such cities as Montreal and Quebec, as compared with Toronto, Hamilton, Ottawa, Winnipeg and Vancouver. These higher birth rates are in part counterbalanced by considerably higher death rates, but the natural increases in Quebec cities are still considerably higher than in the cities of other provinces.

1.—Summary of Births, Marriages, Deaths and Natural Increase, by Provinces, for the calendar years 1931-33, with Averages 1921-25 and 1926-30.

NOTE.—For other than census years birth, marriage and death rates are calculated on estimated population (see p. 164). Figures for individual years 1921-25 will be found at p. 160 of the 1927-28 Year Book and for 1926-30 at p. 150 of the 1933 Year Book.

Natural Increase by Sex.—According to Table 3, the number of male children born in 1931, 1932 and 1933 in Canada exceeded the total male deaths for those years by 67,093, 64,929 and 59,663 respectively, while the gains in the female population during the same periods were 68,863, 66,360 and 61,237. Thus, while the number of male children born exceeded the females in each year the higher mortality among males resulted in a net excess of the natural increase of the females in every case.

3.—Births, Deaths and Natural Increase in Canada,[1] by Provinces and for each Sex, with Totals, 1931-33 and Average 1926-30.

Section 2.—Births.

Throughout almost the whole of the civilized world the birth rate has, in the past generation, been on the decline, though the consequent reduction in the rate of natural increase has been partly offset by the synchronous decline in the death rate.

The crude birth rate of England and Wales, for example, was 35·4 per 1,000 population on the average of the decennium 1871-80, 32·5 in 1881-90 and 29·9 in 1891-1900. In 1913 the birth rate was 24·1, and, though it rose to 25·5 in 1920, it fell again to 22·4 in 1921, 19·7 in 1923, thence by successive stages to 16·6 in 1927, rising to 16·7 in 1928, but thereafter falling gradually each year to 15·3 in 1932.

Similarly, in France the crude birth rate declined from an average of 25·4 per 1,000 population in the 1870's, 23·9 in the 1880's and 22·2 in the 1890's to 21·4 in 1920 and 19·1 in 1923, falling slightly to 19·0 in 1925 and again to 18·8 in 1926, 18·1 in 1930, 17·5 in 1931 and 17·3 in 1932. In Germany, again, the crude birth rate was 39·1 in the 1870's, 36·8 in the 1880's, 36·1 in the 1890's, 25·9 in 1920, 20·7 in 1925, 17·5 in 1930, 16·0 in 1931 and 15·1 in 1932.

In Canada the crude birth rate still stands at a comparatively high figure, being 20·9 per 1,000 in 1933. This, however, is largely due to the influence of Quebec, where the rate, although declining, still stood at 25·9 per 1,000 in 1933, as compared with 18·1 per 1,000 in Ontario. In the other provinces the figures varied from lows of 13·5 and 18·4 per 1,000 in British Columbia and Manitoba to highs of 21·3 and 23·9 in Alberta and New Brunswick respectively.

Statistics of births and birth rates for the years 1931-33 with averages for 1921-25 and 1926-30 are given by provinces in Table **4**. The averages for the former period are exclusive of the province of Quebec which was not then in the registration area.

4.—Numbers of Live Births and Birth Rates, by Provinces, 1931-33, with Averages, 1921-25 and 1926-30.

A.—NUMBERS OF LIVE BIRTHS.

1932.....	22·8	22·4	26·2	28·3	19·2	19·9	22·3	23·0	14·5	22·5
1933.....	21·9	21·4	23·9	25·9	18·1	18·4	21·2	21·3	13·5	20·9

[1] Quebec was not included in the registration area prior to 1926.

Table **5** gives the number of live births in cities and towns of 10,000 population and over for the years 1929 to 1933 inclusive. For recent years previous to 1930 there was a definite tendency for such births to increase but the figures given clearly show that the trend has been in the opposite direction since that year.

[1]Live Births in cities of 40,000 population and over, except Montreal and Quebec, are given for 1921-28 on p. 137 in the Canada Year Book of 1930. Those in cities of 10,000 and over for 1926-28 appear at p. 141 of the 1931 Year Book.

Nativity of Mothers.—In Table 6 will be found for each of the provinces the percentages of legitimate children born alive to Canadian-born, British-born and foreign-born mothers respectively in 1931 and 1932. It is noteworthy that children born to foreign-born mothers outnumbered children born to Canadian-born mothers in the province of Alberta in 1931 but this condition was reversed and Alberta fell into line with all the other provinces in this respect in 1932. For the Dominion as a whole, in the respective years 73·9 p.c. and 75·5 p.c. of the children of mothers whose birthplaces were known had Canadian-born mothers, 11·1 p.c. and 10·3 p.c British-born mothers and 15·0 p.c. and 14·3 p.c. foreign-born mothers.

It is also significant that the percentage of legitimate children born alive to Canadian-born mothers between 1921 and 1932 increased from 42·3 p.c. to 60·3 p.c. in Manitoba, from 36·1 p.c. to 51·9 p.c. in Saskatchewan, from 30·0 p.c. to 43·5 p.c. in Alberta, and from 29·7 p.c. to 48·6 p.c. in British Columbia. Thus more and more of the children of the West are coming within the class of third generation Canadians.

6.—Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1931-32.

Sex of Live Births.—Table 7 shows the number and proportion of live male and female births reported for each province in Canada during the calendar years 1931, 1932 and 1933, with averages for the five-year periods 1921-25 and 1926-30. The figures for Quebec commence only with the year 1926 when that province entered the registration area, and the totals for Canada are limited in the same manner in consequence. Every province shows an excess of male births although individual figures for 1928 gave a slight excess of female births in British Columbia. The table shows that among every 1,000 born in 1933 in the whole of Canada, 513 were males and 487 females. In other words, there were 1,054 males born to every 1,000 females.

7.—Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, for Canada and by Provinces, 1931-33, with Averages for 1921-25 and 1926-30.

NOTE.—For corresponding figures for single years 1921-25, see p. 165 of the Canada Year Book for 1927-28, and for those for 1926-30, p. 155 of the Canada Year Book for 1933.

[1]Quebec was not included in the registration area prior to 1926.

Ages of Parents.—Table 8 shows the age distribution of married fathers and mothers in the year 1926 (the first year for which the figures are available for the whole of Canada) and for 1930-32. The fathers and mothers in each of these years

are arranged according to age and then divided into four equal groups. Each point of age at which a separation comes is called a quartile. To obtain these points of age it is assumed that those in the same year of age are evenly distributed from its lower to its upper limit. In similar manner the deciles divide fathers or mothers in each census year into ten equal groups.

In 1932 one-quarter of the married fathers were under 27·91 years of age, one-half under 32·67 years and three-quarters under 38·78 years. One-quarter of the married mothers were under 24·13 years of age, one-half under 28·45 years and three-quarters under 33·84 years. Nine-tenths of the fathers were under 44·28 years and nine-tenths of the mothers under 38·50 years. It will be noted that the general tendency of the quartile and decile points over the seven years is in a downward direction. In other words, parents generally speaking are gradually becoming younger although in individual years the trend has been reversed.

Birthplace of Parents.—Table 9 classifies the children born in 1931 by country of birth of parents, and furnishes some idea to what extent the coming generation of Canadian born will be the offspring of Canadian-born, British-born or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. Between 1926 and 1932 the percentage of births where both parents were born in Canada rose from 61·4 to 63·0.

[1]Includes the Ukraine. [2]Less than one-tenth of one per cent. [3]This figure gives the number of children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose fathers and mothers were born in different countries. [4]This excludes the percentage of "mixed parentage", *i.e.*, where the two parents were not born in the same country.

Origins of Parents.—Tables **10** and **10A** give the numbers and percentages of births for 1931 and 1932, distributed by the principal origins.

Illegitimacy.—The ratio of illegitimate to total births is, generally speaking, low in Canada as compared with other countries. The steady increase which is noticeable in recent years is probably due, in some measure, to more complete data.

Out of 240,473 live births in the nine provinces of Canada in 1931, 8,365 or 3·48 p.c., were returned as the issue of unmarried mothers. Figures for 1932 show a total of 235,666 live births, of which 8,460 or 3·59 p.c., were returned as the issue of unmarried mothers. Out of this number 4,366 were males and 4,094 females—a ratio of 1,066 males to every 1,000 females, as compared with 1,088 males per 1,000 females in 1931, and a general 1932 rate for all births of 1,057 males to 1,000 females. In 1933 there were 222,868 live births and 8,426 or 3·78 p.c. of these were illegitimate. Of the illegitimate, 4,362 were males and 4,064 were females—a ratio of 1,073 males to 1,000 females. (See Table **11.**)

[1]Less than one-tenth of one per cent [2]This figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers are of different origins. [3]This excludes the percentage of "mixed parentage", *i.e.*, parents not of the same origins. [4]Including Galician and Bukovinian.

Section 3.—Marriages and Divorces.

Subsection 1.—Marriages.

About a century ago it was observed in the United Kingdom that the number of marriages tended to be high when the price of wheat was low and to be low when the price of wheat was high. This was quite naturally the case among a population, the majority of which was living at a comparatively low standard of comfort, and where the staple food was thus the chief factor in the cost of living.

More recently, the curve showing marriage rates in the United Kingdom and other English-speaking countries has ceased to bear any constant relation to the price of the staple food of the people, though it still does so in poorer countries. Its place in influencing the marriage rate has, however, been taken by the general level of prosperity. Marriages in such countries as the United Kingdom, the United States, Canada and Australia tend to increase in "good times" and to diminish in "hard times", when great numbers of those who are contemplating marriage are led to postpone such marriage until the advent of better industrial conditions. Thus marriages in Canada showed considerable declines from the high 1929 level in 1930, 1931, and 1932, but increased generally (in every province except Saskatchewan) in 1933.

Summary statistics of marriages contracted in 1921-33 appear in Table **14.**

14.—Numbers of Marriages and Marriage Rates, by Provinces, 1931-33 with Averages for 1921-25 and 1926-30.

A.—NUMBERS OF MARRIAGES.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Canada.

1933	5·4	6·4	6·0	5·2	6·4	6·7	5·6	7·1	5·7	6·0

[1]Quebec was not included in the registration area prior to 1926.

Age at Marriage.—The average age of all bridegrooms in the Dominion in 1932 was 29·2 years and that of all brides 24·9 years. The average excess of the bridegroom's age was thus 4·3 years. It may be noted in Table **15** that when the contracting parties are grouped by age of bridegroom, the average difference in age is less for the younger groups, grooms under 20 being 0·3 years younger than the brides, while the excess of the average bridegroom's age was 1·6 years in the group 20-24, and steadily increased for each quinquennial age group until it was 11·2 years for the bridegrooms 50 years and over in 1931 and 11·6 years in 1932. On the other hand, when the parties are grouped by the age of the bride, it is found that there is not the same regularity as is shown in the table by age of grooms. In the case of brides in the age groups 25-29 years and 50 years and over the bridegrooms approximate most closely in age to their brides. Since these tables are based upon all marriages contracted during the year, the figures given should not be understood to signify the average ages at first marriage. Table **16** gives the average ages of brides and grooms by provinces.

Out of each 1,000 bridegrooms in 1932, 906 were bachelors, 83 widowers, 11 divorced men; out of each 1,000 brides 935 were spinsters, 55 widows, 9 divorced women. The first year in which as many as 1 p.c. of those marrying had previously been divorced was 1928. There is a fairly close resemblance between the figures of divorces granted, as shown in Table **19** of this chapter, and the number of divorced persons re-married, more particularly in the case of males. Thus 995 divorces were granted in 1932, while 661 divorced males and 579 divorced females married again. This of course does not mean that these were the same persons.

Nativity of Brides and Bridegrooms.—The majority of marriages contracted in the western provinces in past years have been between persons born outside Canada. This condition however is being gradually changed and, although in Alberta and British Columbia, the majority of the bridegrooms in the marriages contracted in 1931 and 1932 were born outside of Canada, as a rule the percentages show a general reduction over the past few years. Canadian-born brides were in the majority, in both years, in each province. In the Maritime Provinces and Quebec, the Canadian-born brides and grooms showed a marked predominance, varying between 86 p.c. and 98 p.c., and in Ontario over 66 p.c. of grooms and 73 p.c.of brides were Canadian born in 1932. Taking Canada as a whole, nearly 68 p.c. of all grooms and exactly 76 p.c. of all brides were born in Canada; these are the highest percentages shown for the period covered by the statistics. Table **17** gives the number of marriages per 1,000 population in each province, as well as the percentage distribution of brides and grooms according to nativity for the years indicated.

17.—Nativity of Persons Married in Canada, by Provinces, 1931 and 1932 with Averages for 1921-25 and 1926-30.

NOTE.—For figures for single years 1921-25, see the 1929 Year Book, p. 166, and for 1926-30, the 1933 Year Book, pp. 163-4.

Subsection 2.—Divorces.

For many years subsequent to Confederation the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in these years.

The effect of the War was to increase very greatly the number of divorces granted in Canada. The causes may be found in the generally unsettling psychological effect of the war period, and the long separations between men on active service and their wives. The provision of new facilities for divorce is also to be considered; owing to a decision of the British Privy Council, divorces in the Prairie Provinces have, subsequently to 1918, been granted by the courts of these provinces, so that Ontario and Quebec have since then been the only provinces in which the applicant for divorce must secure a special Private Act of Parliament. In 1930, however, an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce cases to the Supreme Court of Ontario.

The above-mentioned causes have tended to produce the recent increase in the numbers of divorces granted in Canada, which grew steadily from 114 in 1918 to 875 in 1930, these numbers being those of final decrees, which alone really constitute divorces. In 1931 the number decreased to 692, this being largely due to the transfer of jurisdiction in Ontario divorces from the Parliament of Canada to the

Supreme Court of the province, with the consequent delay between the granting of the decree *nisi* and the decree absolute. In 1932 the number rose to 995, this figure being greater than the total divorces granted in the 50 years from 1868 to 1917, but in 1933 it dropped slightly to 923. The statistics of divorces granted in the years from 1911 to 1933 inclusive will be found in Table **19.** (For divorces in each year prior to 1911 see the 1921 Year Book, p. 825.)

19.—Statistics of Divorces Granted in Canada, 1911-33.

NOTE.—In Prince Edward Island only two divorces have been granted since Confederation, one in 1913 and one in 1931. In consequence of a decision of the British Privy Council, divorces in Manitoba, Saskatchewan and Alberta have, subsequently to 1918, been granted by the courts of these provinces.

Year.	Granted by the Dominion Parliament.					Granted by the Courts.			Total for Canada.
	Ontario.	Quebec.	Alberta.	Saskatchewan	Manitoba.	Nova Scotia.	New Brunswick.	British Columbia.	
1911	13	4	2	–	3	10[1]	6	19	57

[1] Includes one judicial separation. [2] Includes one not effective till court costs are paid. [3] One by Parliament, remainder by courts. [4] Granted by courts. [5] Two granted by Parliament, remainder by courts. [6] Includes one in P.E. Island. [7] Three granted by Parliament, remainder by courts.

Section 4.—Deaths.

Within the past century, and more especially within the past generation, there has occurred throughout the countries of the white world a notable decline in the death rate, except where man has brought death upon himself through wars and the aftermath of wars. How far this decline has been due to advances in medical science, how far to better sanitation and how far to the improvement in the general conditions of living, as a result of the increase in the productive power of humanity, is in dispute, but concerning the facts there is no doubt.

Perhaps the most impressive testimony regarding this decline in the death rate is furnished by the mortality statistics of Sweden, where vital statistics have been kept with great accuracy for the whole nation ever since 1750. There, the crude death rate declined from an average of 27·4 per 1,000 in the decade 1751-60 to 14·3 in the decade 1911-20 and to 11·6 in 1932.

Similarly, in England, the crude death rate, which was 22·5 per 1,000 in the 60's, 21·4 in the 70's and 18·2 in the 90's of the last century, declined to 15·4 in the first decade of the present century and 12·1 in the third; it was 12·0 in 1932. In

Scotland, again, the average rate was 22·1 in the '60's, 21·8 in the '70's, 18·6 in the '90's, 13·9 in 1921-25, 13·6 in 1926-30, and 13·5 in 1932.

Of course the preceding statements are not to be taken to mean that every year will show a decline in the death rate as compared with the preceding year. There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15·3 per 1,000, owing to the influenza-pneumonia epidemic, as against 12·0 in 1917 and 11·9 in 1919. Over a period, however, these idiosyncrasies of individual years are reduced to negligibility, and it remains true that from decade to decade there is, under normal conditions, a decline in the crude death rates of the countries of the white man's world.

As for Canada, while the period elapsed since the introduction of complete and comprehensive vital statistics in 1920 has been too short to establish a definite downward trend, the rate of 12·4 per 1,000 for that year, in the eight provinces then included in the registration area, was substantially higher than in any subsequent year. From 1926 Quebec, which has a higher death rate than the average, has been included in the registration area and its influence is reflected in the totals for Canada shown in Table **20.** A decided improvement is shown in the deaths and death rate of Quebec for the years 1932 and 1933. This has been in evidence ever since 1926, but now, for the first time, Quebec shows a lower rate than any of the provinces to the east of her.

Subsection 1.—General Mortality.

Total deaths and crude death rates in recent years are given in Table **20** for Canada, by provinces. There was a smaller absolute number of deaths in 1933 than in any other year since the record became available for all the nine provinces.

20.—Deaths and Death Rates, by Provinces, 1931-33, with Averages 1921-25 and 1926-30.

NOTE.—For figures for single years 1921–25 see p. 149 of the 1930 Year Book, and for 1926–30, see p. 167 of the 1933 Year Book.

[1] Quebec was not included in the registration area prior to 1926. [2] Exclusive of the Territories.

Age Distribution of Decedents.—The numbers of males and females dying in the nine provinces in 1931 and 1932 are given by single years of age up to 5 and by quinquennial age groups from 5 to 90 years and over in Table **21,** together with the percentage of deaths occurring in each group in each of these years. In the eight provinces that have been in the registration area since 1921, the number of males under 1 year dying in 1932 was only 14·0 p.c. of the total number of male deaths, as against 23·6 p.c. in 1921, and of females, 12·6 p.c. as against 20·3 p.c. Similarly, deaths under 5 years of age among males fell from 29·8 p.c. of the total number of deaths in 1921 to 17·3 p.c. in 1932 and among females, from 26·5 p.c. to 15·9 p.c.

21.—Distribution of Deaths in Canada by Sex and Certain Age Groups, Numbers and Percentages, 1931-32.

The quartile and decile ages of decedents for the years 1926, 1931 and 1932 are given for each sex and for the two sexes combined in Table **22.** The fifth decile and second quartile (or the median) both mark the middle points of the arrays, and the deciles, dividing each half into five groups, give a more detailed picture of the age distribution in each half than do the quartiles. It is shown very definitely that the average ages of decedents have been increasing steadily. This is true for each quartile and each decile. Moreover the improvement between 1931 and 1932, while notable for each sex, is more marked in the case of males. In the case of the

first quartile age for males, for instance, the age has risen from 3·82 years in 1931 to 13·42 years in 1932, or by 251 p.c. That this improvement is mainly due to betterment in the early months of life (between the first and second deciles) is indicated in the second part of the table.

Adjusted Death Rates.—While the crude death rate gives the actual mortality per 1,000 of population, the differing age constitution of the population in different communities and the high mortality among infants and elderly people make the crude death rate no true test of the relative expectation of life in such communities. Where the age and health constitution of a particular group is particularly favourable to low mortality, for example among the selected lives of soldiers in peace time, the crude and the adjusted death rates will be lower than elsewhere.

When comparisons of the rates of mortality in several communities are made by age groups the effects of differences in age constitution between these communities are eliminated, but by a rather cumbrous process which does not bring together and express as a single figure the facts of the situation. It has therefore been considered desirable to adopt a particular community as a standard, and to find what the death rates of other communities would have been if the age and sex constitution of their population had corresponded to those of the community taken as a standard. The "standard" population chosen for this purpose in England and Wales and the United States is the "standard million", based on the age and sex distribution per million of the population of England and Wales at the Census of 1901. That age and sex distribution was as follows:—

Age Group.	Both Sexes.	Males.	Females.
All ages.....	1,000,000	483,543	516,457
Under 5 years.....	114,262	57,039	57,223
5– 9 years.....	107,209	53,462	53,747
10–14 years.....	102,735	51,370	51,365
15–19 years.....	99,796	49,420	50,376
20–24 years.....	95,946	45,273	50,673
25–34 years.....	161,579	76,425	85,154
35–44 years.....	122,849	59,394	63,455
45–54 years.....	89,222	42,924	46,298
55–64 years.....	59,741	27,913	31,828
65–74 years.....	33,080	14,691	18,389
75 years and over.....	13,581	5,632	7,949

Regarding the standard million of England and Wales the Registrar General says: "As the population of this country in 1901 included relatively few infants and old people it forms a standard exceptionally favourable to low mortality". The relative fewness of old people in the population is presumably due to the great increase in English population during the 19th century; the relative fewness of infants, to the marked reduction of the birth rate between the 1870's and the end of the century.

The process above described has been applied to the population of the eight provinces, the former registration area of Canada, for the years 1921-32 and to the population of Quebec for the years 1926-32 in Table **23.** Of the rates there given, those for 1921 and 1922 have been calculated directly, the proportion of the population in each sex and age group according to the Census of 1921 being assumed to hold true for 1922 also; similarly the rates for 1930, 1931 and 1932 have been calculated directly from the proportions shown in each sex and age group at the Census of 1931. For the intervening years 1923-29, for which estimates of total population but not of population by age groups were available, the following method was adopted. The proportions which the adjusted rates of 1921 and 1922 (correct to three decimal places) bore to the crude were averaged, similarly those of 1930 and 1931, and the change was assumed to have taken place in an arithmetical progression during the intervening seven years. Quebec not having been in the registration area in the year 1921, an adjusted rate was not available for that year or for 1922, but as the proportion of the adjusted rate to the crude depends primarily on the sex and age distribution of the population, and as this distribution was known for 1921 and 1931, and the actual proportion of adjusted rate to crude rate for 1931, it was possible to compute a theoretical proportion for 1921. The same method was followed for the total of the nine provinces.

In all of the eight provinces for which 1921 figures are given the proportion of the adjusted rate to the crude was higher in 1921 than in 1931; in other words, the age distribution had become more unfavourable in the later year. In the Maritime Provinces and Ontario the process of "standardizing" or "adjusting" the death rate results in a reduced rate. This is particularly true of Prince Edward Island, which has the largest proportion of aged persons of all Canadian provinces. In the western provinces, on the other hand, the adjusted rates are higher than the crude. So much is this so, that in the case of Saskatchewan, while the crude rate in 1931 was only 6·6, as compared with 10·4 in Prince Edward Island, the adjusted rate was actually slightly higher than that of the island province.

[1]Quebec was not included in the registration area prior to 1926.
[2]Revised since the publication of the 1933 Year Book.

Causes of Death.—More than 86 p.c. of deaths recorded in the present registration area in the years 1931 to 1933 were due to the 32 specific causes named in Tables **24** and **25.** In these tables the groupings for the years 1931-33 are in accordance with the revision of the International List in 1929, which was first applied to Canadian mortality statistics for the year 1931. In some cases, however, the figures for years earlier than 1931 cannot be made exactly comparable with this grouping. These cases are indicated by footnote 2 to Table **24.** In the chart which accompanies the tables, the main object has been to attain the greatest degree of comparability possible over the whole period 1926-33. For this purpose it has been necessary to depart somewhat from the grouping of Tables **24** and **25.** The cases in which this occurs are indicated on the chart by asterisks.

Total deaths in 1933 were the lowest they have been since statistics for the whole of Canada were made possible by Quebec coming into the registration area in 1926. The influenza epidemic of 1929 accounted for an increase in the total, but the deaths from this cause have worked back to a normal level since that year. It is significant, however, that cancer and diseases of the arteries are increasingly important causes of death in spite of all efforts to control them. Suicides show an improvement from the high level reached in 1932. Violent deaths other than suicides have shown a very definite improvement since 1930.

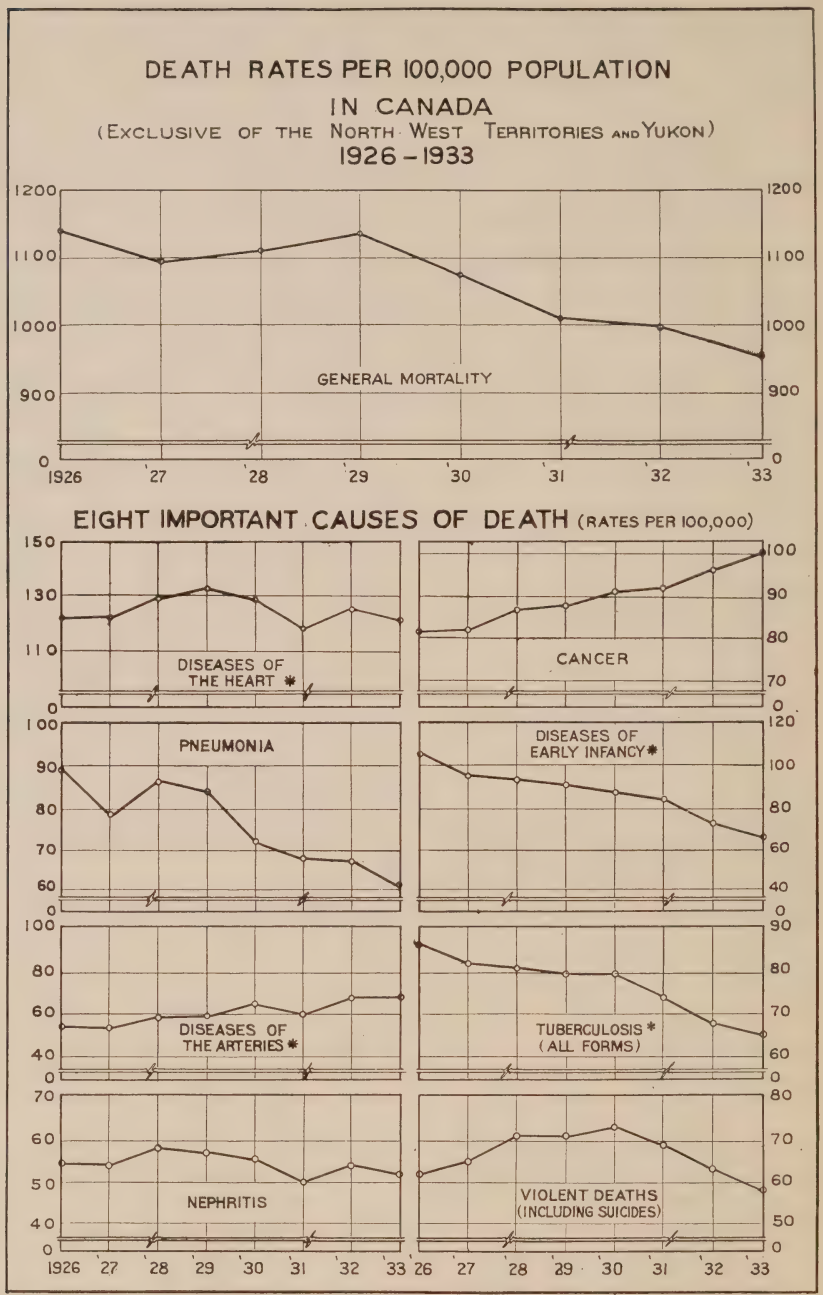
[1] The numbers given in this column refer to the International List of Causes of Death, as revised in 1929 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate or abridged form, is accepted in almost all civilized countries.



[2] For these causes of death the comparability between the figures for the years 1928-30 and those for the years 1931-33 is not exact, owing to changes in classification.

[3] Revised since the publication of the 1933 Year Book.

Deaths in Canadian Cities.—Table 26 gives the number of deaths in Canadian cities and towns of 10,000 population and over in each of the years from 1929 to 1933. Generally speaking, 1929 was a year of high death rates, the total number of deaths reported for the Dominion being 113,515 as compared with 105,136 in 1927 and an average of 108,924 for the period 1926-30. The 1929 figures for most cities show a corresponding increase in the number of deaths. It is probable that these cities contained a larger proportion of the total population in 1929 than in 1927 and it is quite likely that the number of non-residents dying in the hospitals of the cities is also on the increase. In view of these probabilities it is noteworthy that only 11 of the 70 cities and towns listed show increases of deaths in 1933 over the 1929 level. None of the larger cities is included in this group; indeed, in all of the larger cities the improvement has been most substantial.

[1] Including Point Grey and South Vancouver.

Comparative Crude Death Rates of Different Countries.—In Table 27 will be found a comparative statement of the crude death rates of various countries and of the provinces of Canada for the latest available year. It is worthy of note that three Canadian provinces show the lowest death rates in the list and that Canada has a lower death rate than most other leading countries. Canada, New Zealand, Australia, and South Africa are the only countries with death rates under

10·0 per 1,000 of population, with the exception of the Netherlands. The low death rates in the Prairie Provinces are in all three cases due in part to a favourable age distribution of population.

27.—Crude Death Rates of Various Countries in Recent Years.

Country or Province.	Year.	Crude Death Rate.	Country or Province.	Year.	Crude Death Rate.
Saskatchewan	1933	6·3	British Isles	1932	12·4

Subsection 2.—Infantile and Maternal Mortality.

In recent years a great part of the energy devoted by the medical profession and sanitarians to effect a decline in the death rate has gone to reduce infantile mortality, and in this field a large measure of success has been attained. In Canada, the Dominion, provincial and municipal health authorities have all taken part in the struggle to reduce infantile mortality, and usually, in the absence of epidemics, each year is showing an improvement. In the twelve years for which the figures are available there is evident a very considerable decline in infantile mortality. In 1921 the infant death rate for Canada (using figures from provincial sources for Quebec) was 102 per 1,000 live births. This rate had been reduced to 73·1 in 1933. Table **28** gives figures for the whole of Canada for the years 1931 to 1933 and averges for the five-year periods 1921-25 and 1926-30. As in the case of general mortality, the infant mortality in Quebec exceeds that in any other province, although a study of the rates shows that steady improvement has been made in the eight-year period during which the province has been included in the registration area. In Canada as a whole, over 6,000 infant lives were preserved in 1931 which, under conditions prevailing in 1926, would probably have been lost.

28.—Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931-33 with Averages for 1921-25 and 1926-30.

A.—INFANT DEATHS.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Canada.[2]

1933	118	791	821	7,270	3,804	844	1,231	966	439	16,284

B.—INFANT DEATH RATES PER 1,000 LIVE BIRTHS.

Averages, 1921–25	76·8	93·7	105·0	[1]	82·7	83·7	83·0	85·8	60·6	[1]
Averages, 1926–30	79·6	84·8	100·7	127·1	74·1	71·6	73·3	75·5	55·2	93·3
1931	68·1	78·7	87·4	112·9	69·8	64·3	68·6	69·4	49·4	84·7
1932	65·1	73·0	71·6	94·2	61·8	59·2	63·5	58·7	46·7	73·3
1933	60·6	70·9	81·8	94·5	59·8	63·4	61·1	59·9	45·8	73·1

[1] Quebec was not included in the registration area prior to 1926. [2] Exclusive of the Territories.

Infantile Mortality by Causes of Death.—Twenty-one principal causes of death accounted in the years 1926 to 1933 for between 91 and 93 p.c. of the infantile mortaility experienced in the Dominion, as is shown in Table **29.** It is noteworthy that four causes present at birth, *viz.*, premature birth, injury at birth, congenital debility and congenital malformations, accounted for nearly 45 p.c. of the infant deaths of 1933. This percentage shows a definite increase in the years covered. In 1926 it was 41·4 and in 1930, 42·3, and since the total number of infant deaths has decreased by no less than 31 p.c. in the interval since 1926, great improvement in the post-natal care of infants is indicated. In the years 1931 and 1932, 48·6 p.c. and 51·2 p.c., respectively, of all infants dying were less than one month old, and 34·1 p.c. and 36·5 p.c., respectively, were less than one week old, as is shown in Table **30.**

29.—Infantile Mortality in Canada by Principal Causes of Death, 1926, 1931-33.

NOTE.—Figures for the former registration area for the single years 1921 to 1924 will be found at pp. 182-183 of the 1927-28 Year Book, and for 1925 to 1927 at pp. 177-178 of the 1929 Year Book. Figures for the whole of Canada for the years 1927 and 1928 will be found at pp. 138–140 of the 1932 Year Book, and for 1929 and 1930 at pp. 177-178 of the 1933 Year Book.

Infantile Mortality in Canadian Cities and Towns.—Table **31** shows for the cities and towns of 10,000 population and over, the numbers of infant deaths and the death rates per 1,000 live births for the years 1930-33. In the latest year Woodstock, Ont., had the lowest infant death rate, namely, 28·5.

But a very low rate for any particular year means little since wide fluctuations from year to year are the rule. As a matter of fact, Vancouver, B.C., has a finer record over the four years shown than any other place listed, and Victoria, B.C., comes a close second. Three Rivers, Sorel, Chicoutimi, Quebec City, Hull, Timmins, Joliette, Shawinigan Falls, Lévis and Thetford Mines have all rates of over 100 for 1933 and most of them have high rates over the four-year period. Among the large cities, Montreal has recorded a very steady improvement. Apart from Vancouver, already mentioned, Winnipeg and Toronto have very low rates.

Infantile Mortality in Various Countries.—The rate of infantile mortality to live births has been greatly reduced in civilized countries by the recent advances in medical science and in sanitation. The low record is held at the present time by New Zealand, where in 1932 the rate of infantile mortality was only 31·2 per 1,000 live births as compared with 68 in 1905. The Netherlands, Norway, Switzerland and Sweden with rates of 46·3, 46·8, 51·0 and 51·2 in the latest available years, (1932) are the lowest among European countries.

As showing the improvement in recent years, it may be stated that the rate of infantile mortality in England and Wales has been reduced from 128 per 1,000 live births in 1905 to 65·0 in 1932 while the rate in Germany has declined from 196 in 1904 to 79·2 in 1932. In the Netherlands, again, the rate has declined from 131 per 1,000 live births in 1905 to 46·3 in 1932. Statistics are given in Table 32 by leading countries and by provinces.

Infantile Mortality in Great Cities of the World.—In former times cities were considered to be "the graveyards of population". Deaths, consequent upon the rapid spread of infectious diseases, were generally more numerous than births, and it was the prevailing opinion that cities would naturally come to an end if they were not being constantly reinforced by fresh young life from the prolific countryside. The unhealthiness of cities was especially destructive of infant life, and it is one of the greatest triumphs of our time that city life is in our day, if not as healthy, yet not necessarily more dangerous to human nor to infant life than the average living conditions in the country as a whole.

To give particular examples, the rate of infantile mortality in New York was 51 per 1,000 live births in 1932 as against a rate of 58 per 1,000 for the birth registration area of the United States. In the same year, London and Berlin had infant mortality rates of 67 per 1,000 live births, as compared with 69 for the British Isles and 79 for Germany. In Vienna a rate, according to latest statistics, of 79 compared with 106 for Austria. On the other hand, Paris had a rate of 85 in 1932 compared with a rate of 76 for France in the same year, the latest for which comparable statistics are available.

In Canada, Montreal had in 1932 an infantile mortality of 100 per 1,000 live births as compared with 94 for the province of Quebec. Toronto had, in 1932, an infantile mortality rate of 62 per 1,000 live births as against 62·1 for the province of Ontario, while Winnipeg and Vancouver had much lower infantile mortality rates than their respective provinces. Victoria had in 1932 the lowest rate shown in the table and over a number of years both Vancouver and Victoria have shown two of the lowest infantile mortality rates in the world.

The infant mortality in the cities of Canada has been greatly reduced in the years since the inauguration of Dominion vital statistics. Thus the rate for Toronto has fallen from 90 in 1921 to 60 in 1933, that for Winnipeg from 78 to 39, for Vancouver from 56 to 34, for Hamilton from 88 to 57, for Ottawa from 130 to 89, for London from 92 to 64, for Edmonton from 89 to 53, for Halifax from 135 to 71, for Saint John from 147 to 93. Altogether, in the 13 cities of 40,000 population and over in the former registration area of Canada, there were 41,923 live births in 1921 and 3,833 infant deaths, being a rate of 91 per 1,000 live births. In 1933 in these same cities there were 34,856 live births but only 1,983 infant deaths, or a rate of 57 per 1,000 live births.

Maternal Mortality.—Of cognate interest with infantile mortality is the maternal mortality arising out of child-birth. This maternal mortality is shown by Table **34** to be at its lowest among mothers in their twenties and to increase with mothers of more advanced years. The mortality among mothers of different ages per 1,000 live births in the nine provinces is shown for the years 1926-32, with totals for all ages. The maternal mortality is shown by age groups for 1932 and 1933 and by totals and rates for 1931-33 with averages for 1921-25 and 1926-30 in Table **35**, also by causes for 1932 and 1933 in Tables **36** and **36A**.

As compared with the previous year, the number of maternal deaths shows a decrease of 34 or nearly 3 p.c., but the decrease from 1930 is nearly 16 p.c. All provinces except Prince Edward Island, New Brunswick, Quebec and Saskatchewan show decreases compared with 1931. For the second time since 1921, when statistics covered the provinces other than Quebec, and since 1926, when figures were made available for all provinces, a significant decrease in such deaths is shown. By far the most serious causes of maternal mortality are puerperal septicæmia and puerperal albuminuria and eclampsia. It is encouraging to observe that the deaths from these causes decreased from 672 in 1931 to 632 in 1932, or by nearly 6 p.c., although it is also necessary to consider that births in the same period declined by 2 p.c. In 1933 deaths from maternal causes declined to 1,111, *i.e.*, by a further 5.9 p.c. from 1932, and births declined 5.4 p.c. from 1932.

CHAPTER VI.—IMMIGRATION AND COLONIZATION.

While the great majority of French-Canadians can trace their descent to ancestors who left the Old World 250 years ago or even longer, most English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in what is now the Dominion of Canada. During the middle third of the nineteenth century a great English-speaking migration entered the province of Ontario and made it for the first time more populous than the sister province of Quebec, thus bringing about the agitation for representation by population. Thereafter, immigration slackened until the dawn of the twentieth century brought another flood of settlers to the newly opened territories of the great Northwest, resulting in an increase of population between the Censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

Immigration during the second decade of the twentieth century promised, at its commencement, to be even greater than during the first. In its first three years no fewer than 1,084,934 persons entered Canada for purposes of settlement, but the Great War, which commenced for Canada on Aug. 4, 1914, dried up the sources of our immigration in the United Kingdom and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrant arrivals from the United Kingdom in 1918 numbered only about 3,000, as compared with 150,000 in 1913; immigrant arrivals from Continental Europe numbered less than 3,000 in 1916, as compared with approximately 135,000 in 1914. Since the War, immigration to the Dominion has never approached that of the pre-war period.

Section 1.—Statistics of Immigration.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the ills which they know at home rather than take the risks of a new adventure at a distance. Indeed, the depression which began about the close of 1929, with its accompanying unemployment and unsold surplus of farm products, raised the question whether it was desirable that Canada should accept immigrants in any considerable number. Therefore, the Government, on Aug. 14, 1930, passed an Order in Council whereby immigrants, except Britishers coming from the Mother Country or self-governing Dominions and United States' citizens coming from the United States, were allowed to come in only if they belonged to one of two classes—(a) wives and unmarried children under eighteen years of age, joining family heads established in Canada and in a position to look after their dependants; (b) agriculturists with sufficient money to begin farming in Canada. This limitation applies to the whole continent of Europe as well as to many other countries. Regulations affecting immigration from the British Isles, the British Dominions or the United States have not been changed but a policy of no solicitation has been rigidly adopted. In harmony with

this policy the Department of Immigration and Colonization, during 1931, closed all its Canadian Government Information Bureaus in the United States and reduced its representation in the British Isles.

For many years the Immigration Regulations have contained a general provision that immigrants coming to Canada must have sufficient funds to look after themselves until employment is secured. Naturally, when employment is readily available a sum would be considered sufficient which would be insufficient in periods of unemployment, and the enforcement of this regulation is an important factor in reducing immigration at the present time. An Order in Council (Aug. 7, 1929), prohibiting the landing in Canada of any immigrant coming under contract or agreement, expressed or implied, to perform labour or service of any kind in Canada, is also in effect but this prohibition does not apply to farmers, farm labourers, or houseworkers. Under the Order, the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada.

The relationship of prosperity and adversity to immigration is illustrated by Table **2**, which shows that, previous to the present depression, immigration was at its minimum in the years centring on 1896; that it steadily increased from that time until 1908; that a decline took place in the fiscal year ended Mar. 31, 1909, on account of the short depression of 1908; and that thereafter immigration steadily increased till 1913. In the fiscal years 1915 to 1919, political rather than economic conditions restricted immigration but, with the expansion of business at the end of the War, our immigration was more than doubled, while the depression which characterized 1921 and 1922 is reflected in the declining immigration of the fiscal years ended Mar. 31, 1922 and 1923. An improvement in business conditions in 1923 was reflected in an increase of immigration during the fiscal year ended Mar. 31, 1924, when 145,250 settlers entered Canada as compared with less than half that number in the preceding year. The fiscal years ended Mar. 31, 1925 and 1926, showed declines of 23·3 and 33·9 p.c. respectively from the 1924 level, but the fiscal years ended 1927 to 1929 showed increases in harmony with the general upward trend of business. The fiscal year ended Mar. 31, 1930, showed a slight falling-off, and the restrictions on immigration imposed since August, 1930, referred to on p. 211 have been mainly instrumental in reducing the total of immigrant arrivals from 163,288 in 1930 to 19,782 and 13,903 for the fiscal years 1933 and 1934 respectively.

The number of immigrant settlers in Canada is shown by calendar years from 1867 to 1880 in Table **1**, and the number of immigrant arrivals in Canada from the United Kingdom, the United States and other countries, is given by years from 1881 in Table **2**.

1.—Number of Immigrants Settling in Canada in each of the calendar years 1867-1880.

(Compiled from the Reports of the Minister of Agriculture.)

Year.	Number.	Year.	Number.
1867	14,666	1874	39,373
1868	12,765	1875	27,382
1869	18,630	1876	25,633
1870	24,706	1877	27,082
1871	27,773	1878	29,807
1872	36,578	1879	40,492
1873	50,050	1880	38,505

2.—Number of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar or fiscal years ended 1881-1934.

NOTE.—The figures of immigration from the United States for the years 1904 to 1924, inclusive, differ from the figures published in previous issues of the Year Book owing to the discovery that prior to April 1, 1924, certain persons returning to Canada from the United States after having previously resided in Canada had been improperly included in the immigration figures.

Calendar or Fiscal Year.	Immigrant Arrivals from—			Total.[1]	Fiscal Year.	Immigrant Arrivals from—			Total.[1]

[1] The figures of immigration from the United States for the years 1881 to 1891 do not distinguish between immigrants and non-immigrants. As the U.S.-born population of Canada, according to the censuses, increased only from 77,753 to 80,915 between 1881 and 1891, it would appear that the number of permanent immigrants from the United States in these years must have been comparatively small. No statistics of immigrants from the U.S. were collected for the years 1892 to 1896. [2] Calendar year. [3] Six months, January to June, inclusive. [4] Nine months ended March 31.

Sex and Conjugal Condition of Immigrants. — As shown by Table 3, the 13,903 immigrants who came to Canada in the fiscal year ended Mar. 31, 1934, included 5,945 males and 7,958 females, males constituting only 42·8 p.c. of the total, as compared with 46·4 p.c. in the fiscal year 1933. Prior to 1932 they normally exceeded females, as is shown in Table 4.

3.—Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, fiscal years ended Mar. 31, 1935 and 1934.

[1] "Children" since 1926 has included all under 18 years of age.

Racial Origins of Immigrants.—Where there is any considerable immigration into a democratic country, the racial and linguistic composition of the immigrants is of great importance. Canadians prefer that settlers should be of a readily assimilable type, already identified by race or language with one or other of the two great races now inhabiting this country and prepared for the duties of Canadian citizenship. Since the French are not, to any great extent, an emigrating people, this means in practice that the great bulk of the preferable settlers are those who speak the English language—those coming from the United Kingdom or the United States. Next in order of readiness of assimilation are the Scandinavians, Dutch and Germans, who readily learn English and are already acquainted with the working of democratic institutions. Settlers from Southern and Eastern Europe, however desirable from a purely economic point of view, are less readily assimilated, and the Canadianizing of the people who have come to Canada from these regions in the present century is a problem both in the agricultural Prairie Provinces and in the cities of the East. Less assimilable still, are those who come to Canada from the Orient. On the whole the great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those continental European countries where the population is ethnically nearly related to the British, though for some years there was an increasing immigration of Slavs.

The racial origins of the immigrants who arrived in Canada in the fiscal years ended Mar. 31, 1928 to 1934, are shown in Table **5.** In the latest year the British races contributed 50 p.c. of the immigrants, French 9 p.c., and German 8 p.c.

Countries of Birth of Immigrants.—In Table 8 will be found the countries of birth of the immigrants into Canada in the latest two fiscal years. The figures show that the United States with 5,648 was the birthplace of more of our 1934 immigrants than any other single country. This has been the case since 1930. In 1934 England came second with 1,609, Poland third with 1,275 and Scotland fourth with 735.

8.—Countries of Birth of Immigrants, fiscal years ended Mar. 31, 1929-34.

Ports of Arrival of Immigrants.—Throughout the greater part of our history, Quebec has been the port at which the greatest number of our immigrants have landed. In the past years, up to 1934, there was a great increase in the per-

centage of immigrants arriving at the port of Halifax. This would appear to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Figures for recent years are given in Table 9.

9.—Immigrants Arriving in Canada, by Chief Ports of Arrival, fiscal years ended Mar. 31, 1928-34.

Destinations of Immigrants.—The immediate destinations of the immigrants arriving in Canada are given for the years from 1901 to 1934 in Table **10.**

While immigration to the Maritime Provinces during the first 34 years of the twentieth century was comparatively small, that to Quebec and Ontario was very large. From 1905, with the exception of 1929, Ontario received more immigrants annually than any other province of the Dominion, while Saskatchewan was usually second in this respect. In 1929 immigration to Manitoba exceeded that to Ontario by 10,000 persons, but in the years 1930-34 Ontario was again in first place. The immigration to Eastern Canada (Maritime Provinces, Quebec and Ontario) has almost equalled that to Western Canada (Manitoba, Saskatchewan, Alberta and British Columbia) in the 34-year period.

10.—Destinations of Immigrants into Canada, by Provinces, fiscal years ended June 30, 1901-06, and Mar. 31, 1907-34.

NOTE.—The figures for the years 1904-24 inclusive have been revised; see headnote to Table 2.

Prohibited Immigrants.—The following is quoted from Section 3 of the Immigration Act.

PROHIBITED CLASSES.

"No immigrant, passenger or other person, unless he is a Canadian citizen, or has Canadian domicile, shall be permitted to enter or land in Canada, or in case of having landed in or entered Canada shall be permitted to remain therein, who belongs to any of the following classes, hereinafter called 'prohibited classes':—

(a) Idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane at any time previously;

(b) Persons afflicted with tuberculosis in any form, or with any loathsome disease, or with a disease which is contagious or infectious, or which may become dangerous to the public health, whether such persons intend to settle in Canada or only to pass through Canada in transit to some other country: Provided that if such disease is one which is curable within a reasonably short time, such persons may, subject to the regulations in that behalf, if any, be permitted to remain on board ship if hospital facilities do not exist on shore, or to leave ship for medical treatment;

(c) Immigrants who are dumb, blind, or otherwise physically defective, unless in the opinion of a Board of Inquiry or officer acting as such they have sufficient money, or have such profession, occupation, trade, employment or other legitimate mode of earning a living that they are not liable to become a public charge or unless they belong to a family accompanying them or already in Canada and which gives security satisfactory to the Minister against such immigrants becoming a public charge;

(d) Persons who have been convicted of, or admit having committed, any crime involving moral turpitude;

(e) Prostitutes and women and girls coming to Canada for any immoral purpose and pimps or persons living on the avails of prostitution;

(f) Persons who procure or attempt to bring into Canada prostitutes or women or girls for the purpose of prostitution or other immoral purpose;

(g) Professional beggars or vagrants;

(h) Immigrants to whom money has been given or loaned by any charitable organization for the purpose of enabling them to qualify for landing in Canada under this Act, or whose passage to Canada has been paid wholly or in part by any charitable organization, or out of public moneys, unless it is shown that the authority in writing of the Deputy Minister, or in case of persons coming from Europe, the authority in writing of the assistant Superintendent of Immigration for Canada, in London, has been obtained for the landing in Canada of such persons, and that such authority has been acted upon within a period of sixty days thereafter;

(i) Persons who do not fulfil, meet or comply with the conditions and requirements of any regulations which for the time being are in force and applicable to such persons under this Act;

(j) Persons who in the opinion of the Board of Inquiry or the officer in charge at any port of entry are likely to become a public charge;

(k) Persons of constitutional psychopathic inferiority;

(l) Persons with chronic alcoholism;

PROHIBITED CLASSES—concluded.

(m) Persons not included within any of the foregoing prohibited classes, who upon examination by a medical officer are certified as being mentally or physically defective to such a degree as to affect their ability to earn a living;

(n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property;

(o) Persons who are members of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, or advocating or teaching the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers either of specific individuals or of officers generally, of the Government of Canada or of any other organized government, because of his or their official character, or advocating or teaching the unlawful destruction of property;

(q) Persons guilty of espionage with respect to His Majesty or any of His Majesty's allies;

(r) Persons who have been found guilty of high treason or treason or of conspiring against His Majesty, or of assisting His Majesty's enemies in time of war, or of any similar offence against any of His Majesty's allies;

(s) Persons who at any time within a period of ten years from the first day of August, one thousand nine hundred and fourteen, were deported from any part of His Majesty's dominions or from any allied country on account of treason or of conspiring against His Majesty, or of any similar offence in connection with the war against any of the allies of His Majesty;

(t) On and after the first day of July, one thousand nine hundred and nineteen, in addition to the foregoing "prohibited classes", the following persons shall also be prohibited from entering or landing in Canada:—Persons over fifteen years of age, physically capable of reading who cannot read the English or French language or some other language or dialect: Provided that any admissible person or any person heretofore or hereafter legally admitted, or any citizen of Canada, may bring in or send for his father or grandfather, over fifty-five years of age, his wife, his mother, his grandmother or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter; for the purpose of ascertaining whether aliens can read, the immigration officer shall use slips of uniform size prepared by direction of the Minister, each containing not less than thirty and not more than forty words in ordinary use printed in plainly legible type in the language or dialect the person may designate as the one in which he desires the examination to be made, and he shall be required to read the words printed on the slip in such language or dialect; but the provisions of this subsection shall not apply to Canadian citizens and persons who have Canadian domicile, to persons in transit through Canada, or to such persons or classes of persons as may from time to time be approved by the Minister.

(u) Members of a family (including children over as well as under 18 years of age) accompanying a person who has been rejected, unless in the opinion of the Board of Inquiry no hardship would be involved by separation of the family."

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

The operation of the above regulations is illustrated in Tables **12** and **13**, which give the numbers of immigrants rejected on applying for admission and those deported after admission, the causes of such rejection or deportation, and the nationalities of those deported, for each of the 12 fiscal years ended 1923 to 1934, together with the totals for the 20 fiscal years 1903-22 and the 32 fiscal years from 1903 to 1934 inclusive.

Juvenile Immigrants.—Among the most generally acceptable immigrants of recent years were the juveniles of both sexes, many of whom had been trained by highly accredited British organizations for Canadian life before coming to Canada, the boys being taught the lighter branches of farm work, and the girls instructed in domestic occupations. On arrival in Canada the boys were placed on farms, while the girls were placed either in town or country, but the organizations remained the guardians of the children until they had reached maturity and, in addition, the children were subject to efficient and recurrent government inspection until each reached the age of nineteen. This inspection was under the control of the Supervisor of Juvenile Immigration.

Under the British Empire Settlement Agreement the term "children" was applied to boys from 14 to 19 years of age and girls from 14 to 17 migrating to Canada under provincial or approved society auspices. These organizations were assisted by the Oversea Settlement Agreement, which provided free transportation for the boys and girls from the British Isles migrating to Canada under their auspices. On Sept. 23, 1931, the societies concerned were notified that the Dominion Government had decided to discontinue any further assistance of that nature.

The number of such juvenile immigrants to Canada in each year since 1901 is given in Table **14.**

14.—British Juvenile Immigrants, fiscal years ended 1901-34.

Oriental Immigration.—The immigration to Canada of Orientals is fundamentally an economic rather than a racial problem, affecting most of all those parts of the country which are nearest to the Orient and the classes which feel their economic position threatened. A record of Oriental immigration since the commencement of the century is given in Table **15.**

15.—Record of Oriental Immigrants, fiscal years ended 1901-34.

Chinese Immigrants.—Oriental immigration to the Pacific Coast of North America appears to have commenced with the coming of Chinese immigrants about the time of the discovery of gold in California in 1849, and British Columbia is thought to have received its first Chinese immigrants some time before 1870. The original occupations of these immigrants were laundry workers and domestic servants. As early as 1872 Chinese were employed in the coal mines of the province and the Legislature was already considering the imposition of a poll tax on Chinese, the same proposition coming up later in the Dominion Parliament with the design of preventing the employment of Chinese labour in railway construction. A Royal Commission was appointed by the Dominion Government in 1884 to investigate Chinese immigration, and this Commission recommended the imposition of a head tax of $10 upon Chinese entering Canada, together with registration and special legislation regulating the entry of Chinese domestic servants. This led to the passage of legislation in 1885 (48-49 Vict., c. 71), providing that thereafter Chinese of the labouring class should be required, as a condition of entering Canada, to pay a head tax of $50 each. On Jan. 1, 1901 (63-64 Vict., c. 32), this tax was increased to $100, and on Jan. 1, 1904 (3 Edw. VII, c. 8), after another Royal Commission had reported on this matter, the head tax was further increased to $500. This tax was paid by all Chinese immigrants except consular officers, merchants and clergymen and their families, tourists, men of science, students and teachers. In spite of this restrictive legislation, the number of Chinese enumerated at the decennial censuses rose from 4,383 in 1881 to 17,312 in 1901, to 27,774 in 1911, to 39,587 in 1921 and 46,519 in 1931. Of this latter number, 43,051 were males and only 3,468 females. Over 58 p.c. of all the Chinese in Canada, *viz.*, 27,139 were residents of British Columbia.

The Chinese Immigration Act of 1923 (13-14 Geo. V, c. 38),* limits the entry to or landing in Canada of persons of Chinese origin or descent, irrespective of allegiance or citizenship, to the following classes:

(a) Members of the diplomatic corps or other government representatives, their suites and their servants, and consuls and consular agents;
(b) Children born in Canada of parents of Chinese origin or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
(c) Merchants as defined by such regulations as the Minister may prescribe; students coming to Canada for the purpose of attending, and while in actual attendance at, any Canadian university or college authorized by statute or charter to confer degrees;
(d) Persons in transit through Canada;

the last two classes to possess passports issued by the Government of China and endorsed by a Canadian immigration officer. As a result of this legislation no Chinese were admitted to the country as immigrants in the fiscal years ended 1925, 1926 and 1927; three are shown by the above table to have been admitted in 1928, one in 1929, none in 1930, 1931, 1932, one in 1933 and two in 1934.

Japanese Immigrants.—Japanese immigration to Canada commenced about 1896, and a total of some 12,000 came in between then and 1900, but at the Census of 1901 the total number enumerated as domiciled in the Dominion was only 4,738; in 1911, 9,021; in 1921, 15,868; in 1931, 23,342—22,205 of these latter being domiciled in British Columbia. The immigration of Japanese was especially active in the fiscal years 1906 to 1908, in which three years a total of 11,565 entered the country. In the latter year an agreement was made with the Japanese Government, under which the latter undertook to limit the number of passports issued to Japanese immigrants to Canada. The statistics of Table **15** show that Japanese immigration has been very restricted since 1929. Only 105 Japanese immigrants entered Canada in 1934.

*R. S. C. 1927, c. 95.

East Indian Immigrants.—East Indian immigration to Canada, like Japanese, is shown by Table **15** to have been negligible down to 1907, when no fewer than 2,124 East Indian immigrants arrived. However, as a consequence of the operation of the Immigration Regulations, East Indian immigration has for years been comparatively small. A resolution of the Imperial War Conference of 1918 declared that " it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities". However, it was recommended that East Indians, already permanently domiciled in other British countries, should be allowed to bring in their wives and minor children. In the ten-year period ended Mar. 31, 1934, a total of 556 East Indians, many of them women and children, were admitted to Canada.

Expenditures on Immigration.—The sums expended by the Dominion Government on immigration in each of the fiscal years ended 1868 to 1934 inclusive, as stated in the Public Accounts issued annually by the Department of Finance, are shown in Table **17.**

17.—Expenditures on Immigration in the fiscal years ended June 30, 1868-1906 and Mar. 31, 1907-34.

[2] Includes expenditures on British Empire Exhibition: 1924, $649,882; 1925, $599,797; 1926, $70,661.

Emigration from Canada.—An important factor tending to offset the immigration activities of the past was a movement from Canada to the United States which attained considerable proportions at certain periods. The quota system of immigration regulation, applied by the United States Government against immi-

grants generally, but not against the Canadian born, had the effect of limiting immigration to the United States and thereby encouraging Canadians to enter that country. No record of this movement had ever been kept by the Canadian Government, and, while its seriousness was recognized, its magnitude, as indicated by the United States' returns, was questioned on the ground that these returns did not make allowance for Canadians returning to Canada after a more or less extended period of residence in the United States. The Canadian Department of Immigration and Colonization was convinced that a very considerable return movement was taking place, but, until 1924, no attempt was made to ascertain the exact magnitude of that movement. In that year immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. The results are tabulated in Table **18.**

Another circumstance which has, in the past, occasioned a considerable movement from Canada to the United States has, no doubt, been the practice of Europeans to enter Canada and declare themselves *bona fide* immigrants, with the real intention of entering the United States as soon as the quota restrictions would permit them to do so. The tightening-up of the United States Regulations *re* persons entering the United States from Canada, and the active co-operation of the Canadian Department of Immigration and Colonization in discouraging this traffic, seem to have effectually met this situation.

Table **18** shows the number of Canadians who had gone to the United States for purposes of permanent residence and who returned to Canada during the period from April 1, 1924, to Mar. 31, 1934.

18.—Canadians Returned from the United States, fiscal years ended Mar. 31. 1925-34.

Official returns indicate that the movement of population between the two countries is now definitely toward Canada. According to the official returns of the United States' Government, immigration to that country from Canada in the twelve months ended June 30, 1933, amounted to 6,074. The movement of immigrants from the United States to Canada in the same period amounted to 10,996, and there was also a return movement of 15,267 Canadians—a total of 26,263, or a net balance in favour of Canada of 20,189.

In Table **19** will be found the number of transoceanic passengers entering Canada during the fiscal years ended Mar. 31, 1933 and 1934, by description and classes, together with totals by classes for the years 1926 to 1932. It will be seen that the fiscal year ended 1930 showed the largest number of transoceanic passengers and the 1934 figures are lower than for any other year of the record.

19.—Returning Canadians and Other Non-Immigrants Entering Canada via Ocean Ports, by Class of Travel, fiscal years ended Mar. 31, 1933 and 1934, with Totals for fiscal years 1926-32.

NOTE.—Figures in this table cover transoceanic passengers only. Details for 1926 to 1932 will be found in previous editions of the Year Book.

Section 2.—Colonization Activities.

Contemporaneously with the sharp reduction in immigration disclosed by preceding tables, due to the policy of limiting immigration in accordance with the requirements of the country, a new and important development has occurred in the form of colonization activities within Canada. It was found that there were many families and individuals in the cities of the Dominion with farm experience who had been attracted to industrial centres in more prosperous times and would now regard with favour the opportunity of an assured subsistence on the land. In many cases families were still in possession of some capital but were in fear of its gradual depletion through unemployment. It was believed that many such families and individuals would return to the land without financial assistance if they could be guided to suitable opportunities. In order to promote such settlement, co-ordination of the activities of the Land Settlement Branch of the Department of Immigration and Colonization and branches of the Canadian National and Canadian Pacific Railways doing similar work was arranged, a committee was organized with representatives of the three interests mentioned, and an active program of land settlement within the Dominion was undertaken. To establish contact with families or individuals

desiring to return to the land, a small campaign of classified advertising in the daily press was conducted by the committee. There was no suggestion of financial assistance but there was the offer of dependable and disinterested advice and service in placing such families and individuals in touch with opportunities for farm settlement or farm employment. From Oct. 1, 1930, to Sept. 30, 1934, these activities resulted in the recorded placement in farm employment in Canada of 32,602 single men, and in the settlement on farms of 14,748 families, all of this without any expenditure of public funds in the form of financial assistance to such settlers. On the basis of five persons to the family the total landward movement resulting from these activities represented 106,343 persons. In addition to the co-ordinated activities of the two railways and the Department of Immigration and Colonization, several of the provinces carried on effective land settlement movements.

The colonization activities above described disclosed the fact that there were in the cities many families eager to gain a subsistence on the land who could not qualify for such settlement because of lack of capital. As a contribution toward relieving this situation the Dominion Government, in May, 1932, decided to bear a portion of the cost of settlement on the land of selected families who could qualify for such assistance in all localities where the province and municipality concerned were prepared to make a similar contribution, and an agreement to that effect was offered to each of the Provincial Governments. The stipulations of this agreement may be summarized as follows:—

The Dominion Government would contribute one-third of an amount not to exceed $600 per family for the purpose of providing a measure of self-sustained relief to families who would otherwise be in receipt of direct relief, by placing such families on the land, the remaining two-thirds of the expenditure to be contributed by the province and the municipality concerned as might be decided between them. The Dominion Government contribution was to be regarded as a non-recoverable expenditure. The total expenditure on behalf of any one family during the first year was not to exceed $500 for all purposes inclusive of subsistence and establishment, a minimum amount of $100 being withheld to provide subsistence if necessary during the second year. No part of the above-mentioned expenditure was to be used for the purpose of acquiring or renting land.

It was stipulated that all families who might be assisted under the terms of this agreement should be residents of Canada and should be selected from those who would otherwise be in receipt of direct relief, the selection of families to be made without discrimination by reason of political affiliation, race, or religious views.

The province was to be responsible for administration of relief settlement, including the location and inspection of suitable farms, and the selection of families who should be physically fit and qualified in other respects. Expenses of administration were to be paid by the province, and no part of the cost of administration and supervision was to be deducted from the maximum amount of $600 set aside for subsistence and settlement of each family. Disbursements of funds to the families assisted were to be made by the province, which was required to set up an Advisory Committee, including representatives of the Dominion Land Settlement Branch, the Colonization Branch of the Canadian Pacific Railway, and the Colonization Branch of the Canadian National Railways.

Under this plan, in the period from June 1, 1932, to Sept. 30, 1934, a total of 3,744 families consisting of 19,635 persons have been settled on farms. Under the two plans above described, the total landward movement since October, 1930, has, therefore, exceeded 125,000 persons.

CHAPTER VII.—SURVEY OF PRODUCTION.

The Definition of "Production".—The term "production" is used here in its popular acceptation, *i.e.*, as including such processes as the growing of crops, extraction of minerals, capture of fish, conversion of water power into electrical current, manufacturing, etc.—in economic phrase, the creation of "form utilities". It does not include various activities which are no less "productive" in a broad and strictly economic sense, such as *(a)* transportation, refrigeration, merchandising etc., which add to commodities already worked up into form the further utilities of "place", "time" and "possession", and *(b)* personal and professional services, such as those of the teacher and the doctor, which are not concerned with commodities at all, but are nevertheless essential to any civilized society—representing, in economic language, the creation of "service utilities".

As showing the importance of these latter activities, it may be pointed out, for comparison with the figures in the accompanying tables, that steam railway gross earnings in 1932, the latest year for which complete statistics of production are available, amounted to $293,390,415, street railway gross earnings to $43,339,381, and telephone and telegraph earnings to $70,066,067, all of which, from a broad point of view, may be considered as "production". It may be further noted that, according to the Census of 1931, out of 3,927,591 persons of ten years of age and over recorded as gainfully occupied, 306,273 were engaged in transportation activities, 387,315 in trade, 92,317 in finance and 767,705 in service occupations. While 81,610 of the latter were engaged in custom and repair work, the value of which is included in the survey of production, the value of the "production" of the remaining 1,472,000 gainfully occupied persons in the four occupational groups just mentioned would not appear to be included to any extent in the survey of production. Then, on the assumption that 1,472,000 gainfully occupied persons whose production is not included in the survey were no less "productive" in the broad sense of the term than the remaining 2,455,591* gainfully occupied persons (of whom they amounted to practically 60 p.c.), 60 p.c. should be added to our total net production to arrive at an estimate of the grand total value of the "production" of all gainfully occupied Canadians. Since the net value of production of commodities as stated in the survey was $2,105,000,000 in 1932, the grand total money value of the productive activities of the gainfully occupied population of Canada in the same year may be estimated at 160 p.c. of the above figure or $3,368,000,000 or say $3,370,000,000 in round figures.

"Gross" and "Net" Production.—The values of products are shown under two headings, namely, "gross" and "net". "Gross" production shows the total value of all the individual commodities produced under a particular heading. "Net" production represents an attempt to eliminate the value of materials consumed in the productive process. For purposes of ordinary economic discussion, the net figures should be used in preference to the gross, because of the large amount of duplication which the latter includes on account of the necessity of making the individual items self-contained. The tables show the total values of all commodities produced in Canada in the latest years; the values are given as in the producers' hands.

* This figure includes 169,263 gainfully occupied persons whose industries were not specified but who were mainly general labourers and office clerks. The products of the labour of these persons were probably mainly included in the survey of production, but here it is assumed that they were all so included.

Difficulties in Differentiating between the Branches of Production.—There is an increasing demand for a survey of production that will differentiate as between the more important branches and at the same time give a purview of the whole which will be free from overlapping. This is somewhat difficult to present with clearness, in view of the varying definitions that attach to industrial groups from different points of view. For example, brick, tile and cement are frequently included in "mineral production" as being the first finished products of commercial value resulting from the productive process; frequently, however, they are regarded as "manufactures" in view of the nature of the productive process—either allocation being correct according to the point of view. In the summing up, production in such industries is regarded as primary production and also as secondary production, but the duplication is eliminated in the grand totals.

Branches of Production.—The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:—

Agriculture.—Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and the butter, etc., made on the farm.

Forestry.—Forestry production is understood to consist of the operations in the woods as well as those of sawmills and pulp-mills, the latter being limited to the making of first products such as lumber, lath, shingles, pulp and cooperage stock.

Fur Production.—The item of fur production is limited to the wild-life production. To obtain a total of the peltries produced in Canada, it would be necessary to add to the wild-life output the production of pelts on fur farms, which is included in the total for "agriculture".

Mineral Production.—Under mineral production many items are included that are also allocated to "manufactures". Considerable overlapping exists as between "mineral production" on the one hand and "manufactures" on the other. The Bureau presents the detailed statistics of these groups (the chief of which are smelters, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned.

Total Manufactures.—The figure given for this heading is a comprehensive one including the several items listed with the extractive industries above, though also frequently regarded as "manufactures", *viz.*, dairy factories, fish-canning and curing, sawmills, pulp-mills, shipbuilding and certain mineral industries. This duplication is eliminated from the grand totals as listed in Table 5. The figures given for total manufactures are inclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for total manufactures and for the other eight divisions, and deducting the duplications as shown in the foot-notes to the respective tables.

Section 1.—The Leading Branches of Production in 1932.

The total net value of production, as estimated for 1932 by the Dominion Bureau of Statistics, on the basis of statistics compiled by its various branches, was $2,104,900,000. This was less than for any year since 1920, when this survey was instituted. Decreases from the 1931 level were shown in every branch of production except agriculture and the electric power industry and were especially heavy for construction, forestry and manufacturing. Farm yields were generally higher than in 1932, but the average price of farm products was less than in any year in the two preceding decades. The resulting values of farm crops produced in 1932 were less than in any year since 1914.

Manufacturing continued to operate at a comparatively low level of capacity. The value added by the manufacturing process showed a decline of over 20 p.c. from the 1931 level.

Total value of production was 16 p.c. less than in 1931, 35 p.c. less than in 1930, 47 p.c. less than in 1929, 49 p.c. less than in 1928, 46 p.c. less than in 1927 and 42 p.c. less than in 1926. The physical volume of production did not decline to anything like the same extent.

The Main Branches of Production in 1932.—Confining our analysis to the net production of commodities, "net" production signifying the value left in the producers' hands after the elimination of the value of the materials consumed in the production process, it is observed that, owing to the conditions of depression prevailing in 1932, most of the main branches showed declines from the preceding year. The net output of central electric stations, however, showed an improvement, the value in 1932 being $128,420,000 compared with $122,311,000, an increase of 5 p.c. Forestry, combining woods operations and the value added by the manufacturing process in the sawmilling and pulp industries, showed a drop of 33·5 p.c., while mineral production at $191,228,000 recorded a decline of 16·1 p.c. The revenues of the fisheries and of trapping showed declines of 14·9 p.c. and 18·6 p.c., respectively.

Among the branches of secondary production, construction showed the heaviest proportional decline of 57·9 p.c. Manufactures was reduced by 20·7 p.c. and custom and repair production was down by 19·7 p.c. compared with 1931.

Relative Importance of the Several Branches of Production.—Owing to the increase in agricultural revenue in 1932, the lead of manufactures over agriculture, which was 173·9 p.c. in 1931, decreased to 107·0 p.c. in 1932. Agricultural production in 1932 represented 26·9 p.c. of the net output of all branches, while the total value added by the manufacturing processes was 55·6 p.c. of the total net production. However, a number of industries listed under manufactures are also included in the several extractive industries with which they are associated. Eliminating this duplication, the output of the manufacturing industries not elsewhere included was 43·2 p.c. of the total net production. Mining held third place in 1932 with a percentage of 9·1. Forestry was in fourth place, with a percentage of 6·3, followed by electric power with a percentage of 6·1. The construction group in 1932 had an output of 4·1 p.c. of the total net production. Repair work, fisheries and trapping followed with percentages, in 1932, of 2·7, 1·2 and 0·3, respectively.

A summary of gross and net value of production is given by industries for the years from 1928 to 1932 in Table **1**; a detailed itemized statement of the net value of production in 1930, 1931 and 1932, is given in Table **2.**

Grand Totals	**4,122,509,882**	**3,946,609,211**	**3,216,746,735**	**2,500,203,902**	**2,104,908,301**	**100·00**

[1] The gross value of agricultural production here exceeds that given in Chapter VIII, Agricultural Statistics of this edition of the Year Book, by the amount paid to patrons of dairy factories for milk and cream.

[2] Statistics of custom and repair industries were not collected after 1922, and the totals for that year were repeated in 1923 and 1924. The totals for 1926 to 1932 were estimated according to the percentage change in the data for manufacturing.

[3] The item "manufactures" includes dairy factories, sawmills, pulp-mills, fish-canning and-curing, shipbuilding, electric power and certain mineral industries also included under other headings. This duplication, amounting in 1928 to a gross of $730,780,507 and a net of $382,078,720, in 1929 to a gross of $777,954,427 and a net of $412,456,114, in 1930 to a gross of $757,438,326 and a net of $453,015,547, in 1931 to a gross of $610,025,080 and a net of $378,885,534, and in 1932 to a gross of $425,494,363 and a net of $260,227,869, is eliminated from the grand totals.

[4] The proportion of manufactures, freed from all duplication (as explained in note 3) to the grand total of net production was 43·24 p.c., and, under like conditions, the proportion of all secondary production to the grand total of net production was 50·05 p.c.

2.—Detailed Itemized Statement of the Net Values of Production in Canada during 1930, 1931 and 1932.

Classification.	Net Production.		
	1930.	1931.	1932.

[1] This item is exclusive of duplication involved in purchases of power by reporting companies.
[2] For footnote 2 see foot of p. 235.

Section 2.—The Provincial Distribution of Production.

The trend of net production has exhibited considerable variation. In Prince Edward Island there was a decline from 1920 to 1922, followed by substantial recovery until the high point of 1926 was reached, with an almost steady decline to the low point of 1932. In Nova Scotia there was a decline from the high point of 1920 until 1925, a marked increase in 1926, then through a slight decline to the highest point reached since 1920, in 1928, then a gradual falling-off to the low point of 1932. In New Brunswick the highest point was reached in 1920, the next highest in 1926 and the low in 1932, the trend of production in this province being almost level from 1925 to 1930.

In Quebec the decline in 1921 was very severe. During the subsequent period the chief features were a substantial gain in 1923, a minor recession in 1924, and a marked recovery in 1925, continued until 1929, when a high point of $1,050,000,000 was reached. From then to 1932 the decline was rapid, the 1932 production of $558,000,000 being a decrease of nearly 19 p.c. under the 1931 figure. The trend in Ontario was almost parallel, the 1932 production of $885,000,000 being 18 p.c. under that of the previous year.

In Manitoba the course of production was most uneven from 1920 to 1926, when for the next two years an increase was registered, culminating in the high of 1928, when goods to the value of $235,000,000 were produced. Since that time the decline has been rapid, reaching the low value of $100,000,000 in 1932, this production being 11 p. c. under that of 1931. Saskatchewan exceeded the 1920 production in 1922, 1925 to 1928, when the high point was reached, then registered sharp declines from 1929 to 1931 and in 1932 showed an increase of 42 p.c. over the low point reached in the previous year. The trend in Alberta has not been exactly parallel with that of Saskatchewan, the high point in this province having been reached in 1927, since when a steady decline has occurred, culminating in the low values shown in 1932, when the decline was, however, less than 5 p.c. under the preceding year.

In British Columbia steady increases were registered from 1922 to 1929, with a rapid decline until 1932, when a decline was shown of 23 p.c. under the previous year.

The values of gross and net production are given by provinces for the years 1928 to 1932 in Table 3.

[2] The item "total manufactures" on page 234 includes the following industries, also shown under other heads, the amount of the duplication being deducted from the grand totals:—

Classification.	Net Production.		
	1930.	1931.	1932.
	$	$	$
Dairy factories	43,541,731	34,926,701	30,446,292
Sawmills and pulp-mills	181,868,214	136,176,495	41,295,694
Fish-canning and curing	11,891,819	6,906,059	6,420,494
Mineral industries	89,675,638	78,565,549	53,645,156
Electric power	126,038,145	122,310,730	128,420,233
Totals	453,015,547	378,885,534	260,227,869
Totals, Manufactures (duplications eliminated)	1,308,971,179	1,095,696,317	909,998,003

3.—Gross and Net Values of Production in Canada, by Provinces, 1928-32.

Relative Production in Different Provinces, 1932.—It will be seen from Table 3 that Ontario and Quebec held first and second places among the provinces in the net value of production in 1932. The percentage of production of each of these provinces to the total was lower than in 1931, when the net output in the two provinces represented 43·3 p.c. and 27·5 p.c. of the totals respectively. Third place in 1932 goes to Alberta with 7·5 p.c. of the total, while British Columbia, with 7·8 p.c., held third place in 1931. British Columbia and Saskatchewan are fourth and fifth respectively, replacing Alberta and Manitoba from these positions as in 1931. In 1932 Manitoba was in sixth place, followed by Nova Scotia, New Brunswick and Prince Edward Island in the order named.

Section 3.—Leading Branches of Production in each Province, 1932.

The Maritime Provinces.—Production in *Nova Scotia* in 1932 was principally in the manufacturing, mining, agricultural and forestry industries, which were accountable for 38·7 p.c., 22·9 p.c., 18·6 p.c., and 10·5 p.c., respectively, of the net value of output of the province; the contribution of manufactures, aside from

processes carried on in connection with the extractive industries, was 26·3 p.c. In *New Brunswick* manufacturing also took first place as a producer of new wealth, the proportion being 49·4 p.c. Agriculture was second with 24·7 p.c. and forestry third. If the manufacturing group be limited to exclude processes carried on in connection with the extractive industries, it still ranked as the premier industry, with 33·0 p.c. Agriculture, including fur farming, contributed 65·3 p.c. of the net output of *Prince Edward Island*. In the Maritime Provinces as a whole, the value of production was 31 p.c. less than in the preceding year. The generation of electrical energy industry alone showed a gain for 1932.

Quebec.—The value of product derived from manufactures in Quebec was greater than that from any other industry. Manufactures, aside from the output of establishments associated with the extractive industries, contributed 52·2 p.c., while the net output of the entire manufacturing division, referred to the same base, was 67·5 p.c. Agriculture with 17·4 p.c., forestry with 9·0 p.c., and the generation of electrical energy with 8·0 p.c., occupied second, third and fourth places. The increases over 1931 in trapping and in the generation of electrical energy were 23·9 p.c. and 6·6 p.c., respectively.

Ontario.—The net value of production from the manufactures of Ontario, when stripped of all duplication, was $473,000,000 or 53·4 p.c. of the total, compared with $185,000,000 or 20·9 p.c. from agriculture. Mining held third place with 9·7 p.c. of the total, and electric power followed with 5·7 p.c. The forestry output was 3·6 p.c. of the net production of the province. Decreases from 1931 were shown in all the main divisions of production except the generation of electrical energy. The net output of manufactures decreased by $146,800,000, while agriculture showed a decline of $10,700,000 or 5·5 p.c. Except in forestry, fisheries, trapping and construction Ontario led the other provinces in the productiveness of the main branches of industry. The province yielded precedence in forestry operations, trapping and construction to Quebec alone, while British Columbia, Nova Scotia and New Brunswick obtained a greater income than Ontario did from fisheries. About 48·5 p.c. of the net manufacturing output of the country was contributed by Ontario and 32·7 p.c. of the agricultural income was derived from the same province.

The Prairie Provinces.—About 77·8 p.c. of the output of *Saskatchewan* was obtained from farming, which industry was also a predominant producer of new wealth in *Manitoba* and *Alberta*, the proportions being 36·2 p.c. and 63·4 p.c., respectively. Mineral production, chiefly coal mining, held second place in *Alberta* with an output of 13·5 p.c. of the provincial total. Manufacturing was first in importance in *Manitoba*, representing 36·1 p.c. of the value of the net output. *Saskatchewan* was the only province in the Dominion to show an increase in total net value of production, agriculture showing a betterment of $47,401,000 or 107 p.c. over 1931. In *Manitoba*, agriculture and trapping showed gains in 1932 over the preceding year. The agricultural and electric power industries of *Saskatchewan* showed gains in 1932, and the net revenue from agriculture and the electric power industry of *Alberta* was somewhat greater.

British Columbia.—The net production from manufacturing in British Columbia during 1932 was about $75,000,000, but almost half of this amount was derived from manufacturing processes closely associated with the primary industries, especially logging and fishing. The remainder, $41,791,000, was 28·1 p.c. of the net output of the province. Aside from manufacturing, mining consti-

tuted the chief source of new wealth, about 18·4 p.c. of the total net output of the province being contributed by the mines. Forestry and farming followed in order, with percentages of 17·2 and 15·4 respectively.

Details showing the gross and net values of production, by industries, in the various provinces in 1932, together with percentages, are given in Tables **4** and **5**.

Tables **4A** and **5A** give the same information for the year 1931.

4.—Gross and Net Values of Production in Canada, by Industries and Provinces, 1932.

NOTE.—For Dominion totals, see Tables **1** and **2**.

[1]The figures for "manufactures" involve duplicated amounts which were deducted in computing the totals for each province. The duplication arises from including in two places a number of industries which may be regarded as extractive or as manufacturing processes. Shipbuilding for example was included under both "construction" and "manufacturing" up to 1929 (see footnote 1, Table 2). The following statement gives the amount of the duplication by provinces: Prince Edward Island, gross $2,033,757, net $682,884; Nova Scotia, gross $23,389,351, net $12,685,024; New Brunswick, gross $28,782,642, net $14,644,759; Quebec, gross $249,818,705, net $156,702, 888; Ontario, gross $271,025,350, net $168,069,656; Manitoba, gross $23,261,637, net $15,171,161; Saskatchewan, gross $13,164,558, net $8,264,795; Alberta, gross $15,577,403, net $9,714,617; British Columbia, gross $130,384,923, net $67,079,763.

[2]Includes the trapping industry of the Northwest Territories.

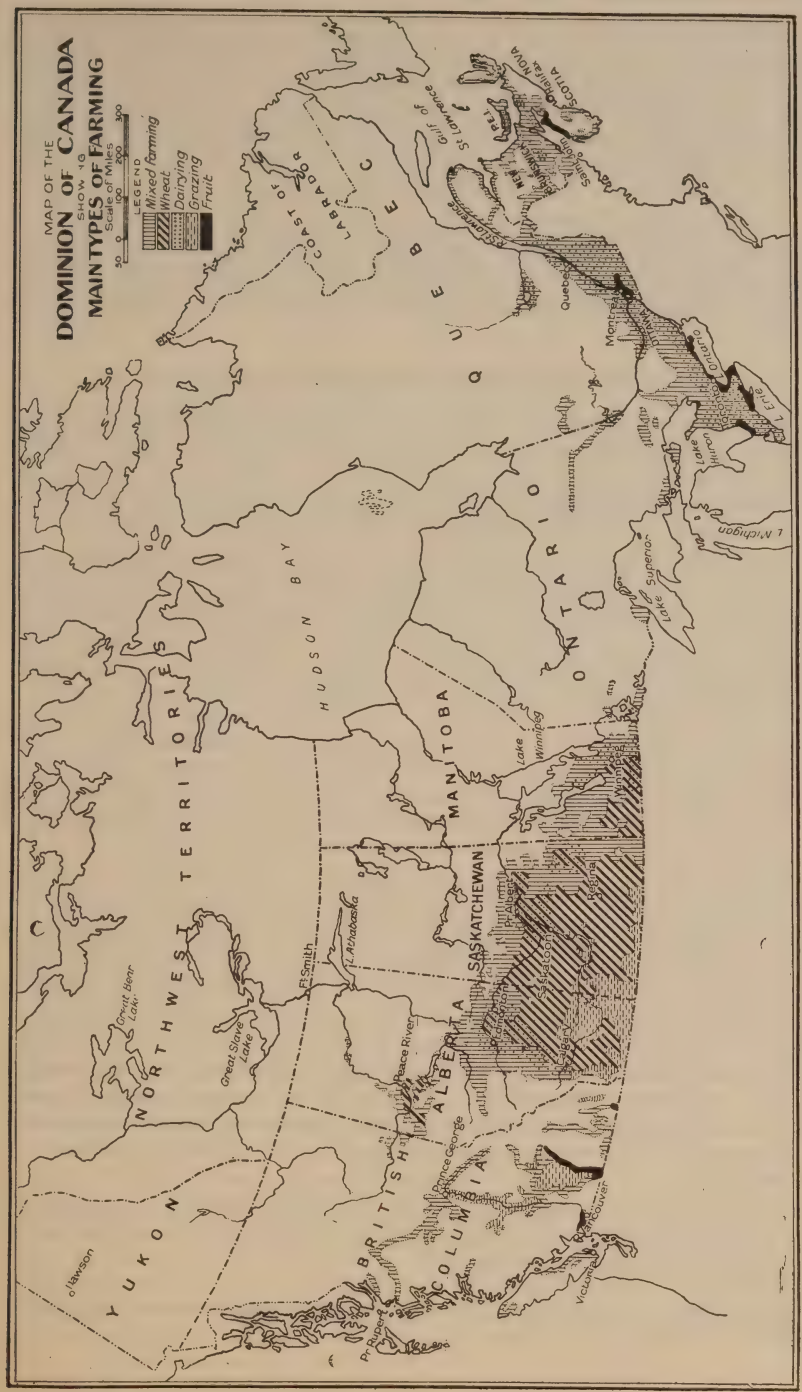
CHAPTER VIII.—AGRICULTURE.

Agriculture, including stock raising and horticulture, is the chief single industry of the Canadian people, employing, in 1931, 28·7 p.c. of the total gainfully occupied population and 33·9 p.c. or over one-third of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see p. 39 of this volume.

This chapter of the present volume contains a statement of current governmental activities in connection with agriculture, including those of the Dominion and Provincial Experimental Stations. This is followed by statistics of agriculture, including agricultural revenue and wealth, field crops, farm live stock and poultry, dairying, fur farming, fruit, special crops, farm labour and wages, prices, miscellaneous, and, since Canadian exports of agricultural commodities are sold in the world market, a review of world statistics of agriculture, compiled from the publications of the International Institute of Agriculture.

The Canada Year Book, 1924, contained, on pp. 186–191, an article on the "Development of Agriculture in Canada", by Dr. J. H. Grisdale, Deputy Minister, Department of Agriculture, Ottawa. To this the interested reader is referred.

Section 1.—The Government in Relation to Agriculture.*



It is provided in Section 95 of the British North America Act that "in each province the Legislature may make laws in relation to agriculture in the province"; it is also "declared that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the Legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, both in the Dominion and in each of the nine provinces, though in two provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister. A short sketch of the functions of the various Departments follows.

Subsection 1.—The Dominion Department of Agriculture.

The Dominion Department of Agriculture was constituted in 1868 under authority of 31 Vict., c. 53, with numerous functions that were by no means purely agricultural, including: (1) agriculture; (2) immigration and emigration; (3) public health and quarantine; (4) the marine and immigrant hospital at Quebec; (5) arts and manufactures; (6) the census, statistics and the registration of statistics; (7) patents of invention; (8) copyright; (9) industrial designs and trade marks.

*This section, with the exception of Subsection 2, has been revised by the Dominion Department of Agriculture. The information in Subsection 2 was checked by the various provincial authorities.

MAIN TYPES OF FARMING IN CANADA

87473—16½

In the course of time the purely agricultural work of the Department came to demand greater attention; the non-agricultural functions were one by one entrusted to other Departments of the Government, while specialization became the order of the day within the Department of Agriculture itself. At the present time it includes the following branches: (1) Experimental Farms; (2) Dairy and Cold Storage; (3) Health of Animals; (4) Live Stock; (5) Seed; (6) Entomological; (7) Fruit; (8) Publications; (9) Agricultural Economics.

For the Acts of Parliament administered by the Dominion Department of Agriculture, see in the index "Acts of Parliament administered by Dominion Government Departments". For the publications of the Department, covering a wide field of information, see in the index the entry "Publications of Dominion Departments".

Subsection 2.—Provincial Departments of Agriculture.*

Prince Edward Island.—The Department of Agriculture is presided over by a Minister, and the staff consists of a live stock superintendent, a superintendent of women's institutes and a dairy superintendent. Assistance is given in co-operative marketing, promoting the live-stock industry and encouraging exhibitions, the formation of boys' and girls' clubs and the welfare of agriculture generally.

Nova Scotia.—Agriculture in the province of Nova Scotia is administered by the Department of Agriculture. The Department is divided into the following main divisions: (1) administration; (2) agricultural college and farm; (3) extension service; (4) marketing; (5) agricultural societies, associations, and exhibitions; (6) dairying; (7) poultry; (8) live stock; (9) entomology and botany; (10) apiculture; (11) women's institutes; (12) immigration and land settlement.

New Brunswick.—The branches of the Department of Agriculture of New Brunswick are as follows: (1) live stock and agricultural societies; (2) dairying; (3) herd improvement; (4) soils and crops; (5) poultry; (6) horticulture; (7) women's institutes; (8) agricultural representatives; (9) industry, immigration and farm settlement; (10) elementary agricultural education; (11) bee-keeping.

Quebec.—The Quebec Department of Agriculture comprises a certain number of branches and sections as follows: *Agricultural Economics Branch,* including the following sections: publicity; co-operation, markets and statistics; demonstration farms; agricultural surveys; field husbandry; drainage; home economics; bee-keeping and sugar making; agricultural societies. *Live Stock Branch,* including the following sections: dairy; veterinary; swine; sheep; horses; poultry; farm buildings. *Horticulture Branch,* including the following sections: fruit growing; truck crops; vegetable canning; flower growing; phytopathology; entomology; botany. *Agricultural Representatives Branch:* 82 agricultural representatives' offices are now established in rural counties of Quebec and are under the supervision of 6 inspectors. The above organizations are all under one General Director of Branches.

There are other activities which are not included in the above organization, such as: agricultural education, agricultural merit competition, provincial dairy school, provincial handicraft school.

*For publications of provincial Departments of Agriculture, see in the index the entry "Publications of Provincial Governments".

Ontario.—The Ontario Department of Agriculture includes the following branches: agricultural and horticultural societies, live stock, institutes, dairy, fruit, crops, co-operation and markets, statistics and publications, agricultural representatives and the Agricultural Development Board. The Department is responsible for the administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, and the experimental farms at Guelph, Ridgetown and Vineland.

Manitoba.—The Manitoba Department of Agriculture includes an agricultural extension service, a dairy branch, a publications and statistics branch, a live stock branch, a debt adjustment board, a registrar of co-operative associations, and a weeds branch. It also conducts the Manitoba branch of the Employment Service of Canada.

Saskatchewan.—The work of the Department of Agriculture is chiefly administrative. It includes the following principal branches: live stock, field crops, dairy, statistics, co-operation and markets, a bee division and a debt adjustment bureau. The Live Stock Branch provides the organization for examining and licensing stallions, purchasing and selling cattle, sheep and hogs to farmers on credit terms, and registering brands for live stock. Pure-bred sire areas are being created under statutory authority in order to eliminate undesirable sires and improve the quality of live stock. The poultry industry is promoted through the flock-culling service, the turkey-grading service and the approved hatchery policy. The Field Crops Branch aids in promoting good cropping and tillage practices and providing control measures for suppressing insect and weed pests. The Dairy Branch directs the grading of cream at all the creameries, promotes herd improvement through cow-testing and administers the provisions of the Dairy Products Act with respect to licensing creamery operators, cream testers, and the bonding of creameries. The Statistics Branch, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers annual data respecting the crops and live stock of the province. The Co-operation and Markets Branch grants charters to co-operative associations under the Co-operative Associations Act, promotes co-operative stock shipping and poultry marketing and maintains an exchange service by a fortnightly news letter through which buyer and seller are brought together. An Apiary Division has been organized to assist bee-keeping, which is developing substantially. Agricultural societies are organized by the Department and grants are paid through the Department, while direction of the activities of societies is centered in the College of Agriculture of the University of Saskatchewan.

Alberta.—This Department conducts the following main services: agricultural schools and demonstration farms, field crops, dairy, live stock, veterinary, poultry, apiaries, fairs and institutes, branding, game regulation, women's bureau service, crop reports and statistics, marketing services, district agriculturists and a branch looking after the fur farm leases of the province.

The attention of the Department has recently been given to the development of apiculture and a provincial apiarist is engaged in this work. Increased encouragement is being given to the live-stock industry through the "Pure-bred Bulls Purchase Act", and in giving supervision to the feeding plan for beef cattle now being carried out by the "Red Label" Beef Association. Increasing efforts are being made to cope with the weed menace and encouragement is being given to the sale and production of registered seed. The poultry industry is also receiving increased attention. Money is expended each summer in connection with soil

survey work, and special efforts are being directed to the development of forage crops and grasses and the improvement of pasturage.

British Columbia.—The Department of Agriculture consists of three main divisions dealing with general administration, animal industry and plant industry.

Under general administration are the branches dealing with collection of statistics, assistance to fall fairs, distribution of publications, soil survey, apiary inspection, supervision of Farmers' and Women's Institutes, and policies of a general agricultural nature, together with the Markets Branch. The Animal Industry Division includes: dairy, poultry, veterinary and general live-stock branches, as well as brands inspection and junior club work. The Plant Industry Division includes: plant disease and pest control, pathology and entomology, field crops and horticultural activities.

The extension service has representatives located in fifteen agricultural districts. These representatives are under the immediate supervision of either animal industry or plant industry, depending upon the predominating feature of agriculture in the several districts.

Particular attention has been given to the development of a live-stock policy, by which the favourable climatic conditions of the coast districts of British Columbia will enable farmers to finish live stock ready for the market at seasons when weather conditions are not favourable in other parts of Canada. This policy has been devised with the aim of enabling the farmers of British Columbia to supplement the work of the prairie live-stock men in maintaining a continuous supply of well-finished animals for the market.

The British Columbia Department of Agriculture through its Dairy Branch has compiled its initial list of pure-bred sires (of the four dairy breeds) which have five or more daughters with records of production. Where known, the records of the dams of these daughters are also given, offering opportunities for comparison.

Particular attention is now being given by the British Columbia Department of Agriculture to forage and pasture improvement and the soil survey branch is making progress with the classification of the orchard soils in the fruit-growing districts of the province.

Subsection 3.—Dominion and Provincial Agricultural Experimental Stations.

Among the most important contributions of Canadian Governments to the development of agriculture throughout the country, is the maintenance of agricultural experimental stations, where research work in both plant and animal breeding and adaptation to climatic conditions is carried on. Already this work has had a profound effect in the improvement of Canadian agriculture. The introduction during recent years of Marquis wheat is an outstanding example, and it is of interest to note that other newer wheats, particularly Garnet, also originated by the experimental farms, may in the near future replace the Marquis in large areas. Among the earlier experiments undertaken, the results of which have passed permanently into good Canadian farm practice, may be mentioned those relating to early seeding, summer fallowing, the use of farmyard manure, the fertilizing value of clover crops and the introduction of suitable grasses and clovers. Both the common red clover and alfalfa now enter into rotations as the result of experiments and efforts to obtain hardy strains and to discover means of resistance

to winter-killing. Further experiments with earlier-ripening and drought-resisting cereals are now being carried on, each new discovery increasing the cultivable area of Canada. Other researches relate to the production of frost-resisting fruit trees for the Prairie Provinces. This research work has already had a profoundly ameliorating effect upon Canadian agriculture. Statements regarding the work now under way at the Dominion Experimental Farms and Stations and at Provincial Agricultural Colleges and Experimental Stations follow.

(A) Dominion Experimental Farms and Stations.*

Inaugurated in 1886 by Act of Parliament (49 Vict., c. 23), the Dominion Experimental Farms system was at first made up of the Central Farm at Ottawa and four branch farms: one at Nappan, Nova Scotia, for the Maritime Provinces; one at Brandon for Manitoba; one at Indian Head for the Northwest Territories; and one at Agassiz for British Columbia.

The opening up and rapid settlement of the Dominion have led to a corresponding increase in the number of experimental farms and stations.* These, with an experimental fox ranch, now total 29, with a total acreage of 16,256·74, as compared with the original five farms, with a total acreage of 3,472, established in 1886. The following list shows the present number of farms and stations, with the acreage of each and the date of establishment.

DOMINION EXPERIMENTAL FARMS AND STATIONS, 1933.

Farm or Station.	Province.	Acreage.	Date Established.
Central Farm, Ottawa	Ontario	825·5	1886
Kapuskasing Station	Ontario	1,270	1910
Harrow Station	Ontario	198·3	1909

[1]Transferred in 1931 from the Forest Service, Department of the Interior, to the Department of Agriculture.

In addition there are 12 sub-stations, *viz.*, Regina and Rosthern, Sask.; Wainwright, Fort Vermilion and Beaverlodge, Alberta; Fort Smith, Resolution, Provi-

*The five original farms established in 1886 are known as "Experimental Farms"; those added since are styled "Experimental Stations". No distinction in the work is implied by these titles.

dence and Good Hope, Northwest Territories; Carmacks, Yukon; Horse Farm, St. Joachim (operated from Ste. Anne de la Pocatière), and Harrington Harbour, Quebec. There is also the Dominion Range Experiment Station at Manyberries, Alberta, and a special Forage Crops Research Station at the University of Saskatchewan, Saskatoon. Experimental work under the Division of Illustration Stations is conducted on 13 farms in Prince Edward Island, 19 in Nova Scotia, 19 in New Brunswick, 53 in Quebec, 16 in Ontario, 15 in Manitoba, 30 in Saskatchewan, 22 in Alberta and 19 in British Columbia. Small experimental plots are also being operated at several points along the line of the Hudson Bay Railway.

Organization of the System of Experimental Farms.—The Central Farm at Ottawa, as its name implies, is the centre or headquarters of the system. Thereat are stationed the Director, having control and general supervision of the whole, and the chief technical officers, each having charge of his special line of work, both at the Central Farm and the branch farms. At Ottawa, the policy to be pursued throughout the system is settled by agreement after discussion by the Director, the technical officers, and the superintendents on whose branch farms the work is to be conducted. The technical staff at Ottawa supervises the actual experimental work at the Central Farm. At the branches, the superintendents are in charge of the carrying out of the various lines of general experiment, and also conduct experiments of local importance.

The divisions at Ottawa, which represent the different lines of work carried on throughout the system, and have each a technical officer in charge, are as follows: (1) animal husbandry; (2) bacteriology; (3) bees; (4) botany; (5) cereals; (6) chemistry; (7) extension and publicity; (8) economic fibre production; (9) field husbandry; (10) forage plants; (11) horticulture; (12) illustration stations; (13) poultry and (14) tobacco. Briefly the main lines of the work of these divisions are as follows:—

Animal Husbandry.—This division is concerned mainly with projects relating to the economical production of live stock and live-stock products on the farms of Canada. Demonstrational, experimental and research work in breeding, feeding, housing and management of beef cattle, dairy cattle, horses, sheep and swine and in the handling of the products of these classes of live stock on the farm constitute the main lines of work of the division.

Bacteriology.—The work of this division consists chiefly in research conducted in close co-operation with other divisions on problems having a bacteriological bearing. The main lines of investigation deal with questions of pure milk production and maintenance, soil fertility, the preparation and preservation of foodstuffs and fodders, bee diseases, etc. Assistance is given to farmers through the preparation and distribution of cultures of legume bacteria for seed inoculation. Further service is rendered through the bacteriological analysis of water, milk, foods and feeding stuffs, soils and many other materials.

Bees.—The work of the Bee Division is divided into three parts: (1) Experimental and research work related to the care and management of bees. This includes the investigation of such problems as swarm control, wintering, bee diseases, queen breeding, etc. (2) Honey investigations. In co-operation with other divisions a thorough examination of Canadian honeys is being made and projects relating to the storage of this commodity are being conducted. In addition, the inspection of honey for export trade is being carried on. (3) The dissemination of information by means of bulletins, pamphlets, press articles, correspondence, lectures, etc., to beekeepers throughout Canada.

Botany.—The work of this division deals with two main phases, economic botany and plant pathology. The former comprises a study of plants of use in agriculture, including medicinal and poisonous plants and plants of general economic value. Considerable attention is being given to a Dominion-wide survey of weeds and a study of the life history of the more important kinds. Many phases pertaining to this section of work are carried on co-operatively with other services in the Department. Pollination studies, pasture investigations, etc., are being carried on under a well-devised policy. A herbarium is maintained, which is becoming increasingly valuable as a reference collection not only for the use of the Department, but also for students and colleges. For reference purposes an extensive collection of seeds has been accumulated, and constitutes one of the most valuable in the Dominion. It comprises representative collections of seeds of plants occurring all over the globe.

The plant pathology section is devoted to research on diseases caused by fungi and bacteria occurring on each and every kind of plant, whether constituting our natural resources, including forestry, or grown for special purposes. Without a recognition of the most up-to-date and modern means used in plant pathology, immense national losses would result. Many instances might be quoted to indicate that modern methods of control and prevention have been responsible for a substantial reduction in the cost of production of all kinds of crop plants.

At Ottawa the Central Plant Pathological Laboratory serves as headquarters for the Dominion. At the same time, besides undertaking special phases of mycological research, the Central Laboratory directs the policy of a series (10) of branch laboratories extending from coast to coast and dealing with the important phases of work of local interest and importance. Among these laboratories, the Dominion Grain Rust Research Laboratory at Winnipeg may be specially mentioned, as an example of a centre of close co-operation between Dominion and Provincial agencies in the study and prevention of losses from grain rust. Three of the branch laboratories deal with the fruit industry, *viz.:* Kentville, N.S., St. Catharines, Ont., and Summerland, B.C. Field crop and potato diseases are dealt with mainly at Charlottetown, P.E.I., and Fredericton, N.B., while Edmonton, Saskatoon, and the Winnipeg laboratory already referred to, are concerned with the diseases of grain most important economically, *viz.*, smuts, rusts, foot and root rots, etc. Saanichton, B.C., serves the interests of Vancouver island and the Fraser valley.

The Central Laboratory directs a Dominion-wide plant disease survey, keeping a close watch on the progress of diseases and enabling steps to be taken without delay to prevent the unsuspected establishment of the insidious enemies of agriculture throughout the Dominion.

The seed potato certification service is also directed from these headquarters and its aggressive policy has secured most valuable export markets for the Dominion.

The National Mycological Herbarium and a unique collection of forest pathological and wood-destroying fungi, both of specimens and living cultures may be mentioned as outstanding among reference collections.

In addition to these more or less specialized research phases of work, the importation of plants and plant products is closely supervised to prevent entry of destructive plant diseases. Thus there exists a plant pathological service devoted to the maintenance of health and quality of every agricultural commodity produced in Canada.

Cereals.—The chief functions of the Cereal Division may be enumerated as follows: (1) the production of superior varieties of cereal and leguminous grains

by a process of breeding and selection; (2) the importation and testing of promising varieties from other countries; (3) the production of *élite* stock seed of registerable varieties of grain for propagation by members of the Canadian Seed Growers' Association; (4) the evaluation of various crop combinations which may prove especially desirable for specific purposes; (5) the systematic description and study of leading varieties; (6) the verification of the genuineness and purity of seed stocks submitted for the purpose; (7) the investigation of varieties of grain for which a licence has been requested, in accordance with the Canada Seeds Act; (8) the identification of varieties submitted by farmers and others; (9) the encouragement of the use of good seed of adapted varieties through the use of exhibits, press articles and public addresses; (10) the investigation of special problems which have a bearing on cereal breeding and development work.

Probably the most important problem which the division has in hand at the moment is an attempt to develop for Western Canada a variety of hard red spring wheat capable of resisting the ravages of stem rust. This work, which is centralized chiefly at the Rust Laboratory at Winnipeg, appears to be progressing rapidly toward the goal desired.

Chemistry.—Investigations towards the solution of problems affecting Canadian agriculture and direct assistance to farmers, market gardeners, provincial agricultural representatives and others through correspondence and analysis, constitute the two chief phases of the division's activities. Further important work includes the official chemical examination of food products submitted by the Health of Animals Branch, the Dairy and Cold Storage Branch and the Fruit Branch—about 2,000 samples in all. The division also renders chemical assistance to a number of branches of the Government service, *e.g.*, the National Parks Branch, Department of the Interior; the Department of Marine and the Department of Fisheries.

Extension and Publicity.—This division edits and prepares for printing all publications issued by the Experimental Farms, prepares and stages educational exhibits at fairs and exhibitions throughout Canada, maintains and operates a lending bureau of educational lantern slides, issues annually to the press about 200 timely and seasonal articles, and in various other ways makes the work of the farms as widely known as possible.

Economic Fibre Plants.—Extensive field and mill experiments are carried out with the best varieties of fibre flax and hemp on the Experimental Farm plot fields at Ottawa and several of the branch farms. The division renders valuable marketing services to the Canadian flax growers by serving as a medium for trade with Ireland. Increasing amounts of fibre seed are being sold in the Irish market each year.

Field Husbandry.—Experiments are being conducted by this division in order to learn the most suitable crop rotations and crop sequences for various parts of Canada. Information is being secured on the newest and best methods of preparing the land for different crops, as well as on the most efficient methods of seeding and harvesting. Investigations are in progress in regard to drainage, to irrigation and learning the most efficient methods of conserving and utilizing soil mositure in the Prairie Provinces.

How to control the noxious weeds which cause such serious economic losses in many parts of Canada is an important problem studied by means of various cropping systems, cultivation methods and applications of chemicals. How to improve the carrying capacity of unproductive pasture land is another project under investigation. The cost of operating tractors, the value of new types of farm machinery,

and the cost of producing various farm crops is being studied. Comprehensive trials with various silage crops are being continued in order to secure the most reliable information on the proper time and method of ensiling corn, sunflowers, red clover, sweet clover, alfalfa, buckwheat, cereals and other farm crops. To determine the most economical means of using farm manure and commercial fertilizers for farm crops is the object of another group of field husbandry experiments.

Forage Plants.—This division has for its work the improvement of forage plants by breeding, the technique of seed production, principles of compounding seeds mixtures, response of different species to grazing, the introduction and testing of new species, and related problems. These studies cover a wide range of crop plants including herbage grasses and legumes, corn, sunflowers, field roots, sugar beets, soya beans, and cereals for forage. Research work with crops that are adapted to Eastern Canada is centered at Ottawa. In Western Canada the Dominion Forage Crops Laboratory has been established at Saskatoon, Sask., in co-operation with the University of Saskatchewan, for the purpose of developing early-maturing, hardy, and drought-resistant strains of herbage plants adapted to the Prairie Provinces. At the Dominion Range Experiment Station at Manyberries, Alberta, range investigations are in progress to study changes in the natural vegetation under different systems of grazing and other feed problems associated with range management.

Horticulture.—The Division of Horticulture deals with fruit growing, vegetable gardening and with ornamental plants. The breeding of new varieties has been an important feature of the work of this division. Some of the outstanding fruits originated there which are being planted in Canada are: apples—Melba, Joyce, Hume, Lobo, Linda and Sandow; raspberries—Brighton and Count; strawberries—Cassandra and Portia, and of vegetables: corn—Banting and Pickaninny; egg plant—Blackie; rhubarb—Ruby; tomato—Abel, Alacrity, Bestal and Herald.

Valuable research work in cider making is being done in this division and cold storage experiments with fruits are in progress. The division co-operates with farmers in orchard experiments and blueberry and cranberry investigations. Research in plant nutrition is also an important line of work.

Illustration Stations.—By comparative demonstration the Division of Illustration Stations is carrying forward a co-operative program of crop introduction and improvement on some 206 privately-owned farms. These stations are located in the different provinces, primarily in newly-settled agricultural communities, where the most suitable varieties and crops are not being grown, or in the older settled districts, which have developed acute problems in crop production, resulting from weed infestation, soil drifting, depletion of soil fertility, as well as many other varying factors, which limit crop growth. As centres for production of seed grain, seed potatoes, grasses and clover seeds from the most suitable and hardy varieties, the illustration stations have accomplished a great deal and have established leadership in the community in general farm improvement, including live stock, building and home beautification.

Poultry.—While past conditions called for work largely along practical demonstrational lines, the present demands more scientific investigation, particularly in the studies of nutrition, disease and breeding problems. To meet these requirements, trained men have been added to the staff and, through the co-operation of the Health of Animals Branch, additional assistance has been supplied for the study of disease, so that the division is equipped as never before to assist the industry as a

whole and the individual poultryman in particular in solving the various problems that are continually arising in this rapidly growing field. In addition, the registration of poultry has increased throughout the whole Dominion.

Tobacco.—The Tobacco Division is concerned with investigational and research work in connection with the tobacco industry of Canada. This includes active research on problems of fertilizers and soils; breeding, selection and standardization of varieties; cultural methods; curing and fermentation; diseases and insects; marketing; exhibitions and educational work. Through a closer co-ordination between Dominion, provincial and industrial agencies the industry has made great progress during the past five years, both in the domestic and export markets. The research work of the Dominion tobacco service was completely reorganized in 1929 and subsequently; a co-operative relationship has been developed with the Department of Trade and Commerce with a view to opening up new outlets for Canadian leaf; joint committees, consisting of Dominion and provincial officials, growers and members of the trade, have been set up in Ontario and Quebec to further the interests of the industry. In general, the Tobacco Division renders assistance in the development of Canadian tobacco production along sound economic lines.

In addition to the work done by the Divisions of Extension and Publicity and Illustration Stations, the results of the work of the Experimental Farms are made available to the farmer: (1) by correspondence; (2) by publications; and (3) by articles in newspapers. The farm officers devote considerable time each year to lecturing, demonstrating, judging at fairs and assisting at short courses in agriculture. Excursions to the various farms are also a valuable means of bringing the work to the attention of the farmer.

(B) Provincial Agricultural Colleges and Experimental Stations.

Under the above heading, outlines of the work done at provincial agricultural colleges and experimental stations were given by provinces at pp. 198-203 inclusive of the 1930 Year Book. The interested reader is referred to that volume, and to the following provincial publications for information concerning courses and programs of work at these institutions:—

Nova Scotia.—Annual Report of the Department of Natural Resources for Nova Scotia; College Prospectus of the College of Agriculture, Truro, N.S.

Quebec.—The Annual Report of Macdonald College, Ste. Anne de Bellevue, Quebec, and the prospectuses and annual announcements of the School of Agriculture, Ste. Anne de la Pocatière, and the Oka Agricultural Institute, Lake of Two Mountains, Quebec.

Ontario.—Annual Report of the Ontario Agricultural College and Experimental Farm, Guelph, Ont.

Manitoba.—Annual Report of the Manitoba Agricultural College, Winnipeg, Man.

Saskatchewan.—Annual Report of the College of Agriculture, University of Saskatchewan, Saskatoon, Sask.

Alberta.—Annual Report of the College of Agriculture, University of Alberta, Edmonton, Alberta.

British Columbia.—Annual Report of the Faculty of Agriculture, University of British Columbia, Vancouver, B.C.

Section 2.—Statistics of Agriculture.*

Census Statistics.—In addition to the statistics collected annually, which are the subject of this section, valuable information is published, following each decennial census, on such subjects as the total number of farms, their tenure, acreage, value, mortgage debt, etc. In this volume of the Year Book, the latest information compiled to date on these subjects will be found in Subsection 10, pp. 295-301.

Crop-Reporting Service.—The voluntary crop-reporting service of the Dominion Government, which has been in operation since 1908, has for its object the issue of accurate, timely and independent reports on crop conditions throughout the Dominion; first, in the interests of the general body of Canadian farmers; secondly, for the information and guidance of other interests allied to and dependent upon agriculture (interests represented by statesmen, economists, bankers, grain dealers, transportation agents and others); and thirdly, for reporting to the Institute of Agriculture at Rome (to which Canada is an adhering country), in return for reports on the production of other countries and of world totals which influence prices and consequently affect the interests of Canada. Supplementing the monthly reports from crop correspondents, the Bureau issues telegraphic crop reports utilizing the services of agriculturists throughout the Dominion. For the Prairie Provinces, these are issued every week from the first of June to the first of September, while the reports on a Dominion-wide basis are issued every two weeks during the same period. The program of reports for 1935-36 is given in the Monthly Bulletin of Agricultural Statistics, January, 1935, pp. 38-40, and is also issued as a special leaflet.

Annual Statistics.—In addition to the crop-reporting service, statistics of the areas under field crops and of the numbers of farm live stock are collected. These arrangements have been in force since 1918, and are carried out by the Dominion Bureau of Statistics in co-operation with the Provincial Governments. The statistics are secured by simple schedules which are at present returned by about one-fifth of the farmers of Canada. They form the basis of the estimates for the whole of Canada. The results for wheat, oats, barley, rye and flax in the three Prairie Provinces are ready for publication in August, while the results for the remaining crops and for the numbers of farm live stock are published in November and December. The areas, thus determined, when multiplied by the average yields per acre as reported by crop correspondents, form the basis of the total estimated production for each crop.

The June schedule covers the areas sown to field crops, the numbers of live stock and poultry on hand and breeding and marketing intentions with regard to live stock and poultry. The December schedule contains the same items with the exception of field crop areas.

The schedules are distributed and collected through the agency of the rural schools in New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan, while in Prince Edward Island, Nova Scotia, Alberta and British Columbia the schedules are sent direct to the farmer through the mail.

---

* Revised under the direction of Dr. T. W. Grindley, Chief of the Agricultural Branch, Dominion Bureau of Statistics. This Branch is concerned with both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour, and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, and reports on the milling and sugar industries and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXIX, Section I, under "Production".

Monthly Bulletin of Agricultural Statistics.—Originally established in 1908 as the "Census and Statistics Monthly", but changed to its present title in April, 1917, this publication is now in its twenty-eighth year. It is the official organ, not only for the monthly crop reports and annual statistics previously described, but also for statistics of dairying, fur farming, fruit, hives and honey, hops, tobacco, maple products, sugar beets, beet sugar, flax fibre, clover and grass seeds, visible supplies, prices, values, foreign agriculture and other subjects in considerable variety.

Presentation of Agricultural Statistics.—In the current edition of the Year Book, statistics of agriculture are presented under the following headings: (1) agricultural revenue and wealth; (2) acreage, yield and value of principal field crops, distribution of the wheat and oat crops, etc.; (3) farm live stock and poultry; (4) fur farming; (5) dairying; (6) horticulture; (7) special agricultural crops; (8) farm labour and wages; (9) prices of agricultural produce; (10) agricultural statistics of the census; (11) miscellaneous agricultural statistics; (12) principal agricultural statistics of the world.

Subsection 1.—Agricultural Revenue and Wealth.

Revenue.—Table 1 shows under principal headings the gross agricultural revenue of Canada, by provinces, for the years 1929 to 1933. It is important to note that the figures represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production.

1.—Estimated Gross Annual Agricultural Revenue of Canada, Itemized by Provinces, 1929-33 ("000" omitted.)

NOTE.—Preliminary figures for 1934 and revised figures for 1930-33 will be found in the Monthly Bulletin of Agricultural Statistics, March, 1935.

[1]Revised since publication of 1933 Year Book.

Table 1 shows that in 1933 the estimated gross agricultural revenue of Canada was $762,302,000 as compared with $766,794,000 in 1932, $836,114,000 in 1931, $1,268,141,000 in 1930 and $1,631,081,000 in 1929. The total for 1933 shows a decrease of $4,492,000 or 0·6 p.c. as compared with 1932. The upward movement of farm prices since the above valuations were made suggests an upward revision for 1933 revenue when new figures are compiled in March, 1935.

Wealth.—Table 2 shows approximately, by provinces, the gross agricultural wealth of the Dominion in 1933.

2.—Estimated Gross Agricultural Wealth of Canada, by Provinces, 1933. ("000" omitted.)

British Columbia	84,057	46,224	12,885	14,102	1,927	382	31,276	190,853
Totals	**2,032,769**	**1,342,924[1]**	**650,664**	**403,135**	**33,456**	**7,262**	**762,302**	**5,232,512**

In this table, full use is made of the recently published results of the Census of 1931 giving the values of lands, buildings, and implements and machinery. The 1933 figures quoted for buildings and for implements and machinery correspond with the values quoted in the 1931 returns. These items change very little in value. The 1933 figures for value of lands are based on the 1931 census figures but are corrected to 1933 levels by the use of the annual estimates of farm land values. The other four items—live stock, poultry, animals on fur farms and agricultural production—are estimates for 1933.

The gross agricultural wealth of Canada for 1933 is estimated at approximately $5,232,512,000 as compared with $5,209,760,000, the revised estimate for 1932.

Subsection 2.—Acreages, Yields and Values of Field Crops.

The Chief Field Crops of the Latest Ten Years.—In Table 3 will be found a summary statement of the acreages, yields and values of wheat, oats, barley, rye, buckwheat, flaxseed, potatoes, hay and clover and alfalfa for the latest 10 years. Comparative figures back to 1908, given at pp. 230-232 of the 1929 Year Book, indicate the recent growth of Canadian agriculture. In particular may be noted the tripling of the wheat crop, the almost doubling of the oat crop, the tripling of the barley crop, the thirteenfold increase in the rye crop, the 40 p.c. addition to the hay and clover crop and the sevenfold increase in the alfalfa crop within the past 25 years, disregarding the 1931 to 1934 crops as not, by any means, representing maximum yields. On the other hand, the acreages and yields of the potato crop have not shown a wide variation throughout the period, presumably because this crop is produced mainly for home consumption. Those who desire figures for earlier years will find certain information on acreage, yield and value in the Statistical Summary of the Progress of Canada at the beginning of this volume.

1934	679	1·96	1,328	12·67	16,822

[1]Comparative figures for the years 1908-24 are given in the Canada Year Book, 1929, pp. 230-232. The total value of wheat for 1912 should be $139,090,000 instead of the $19,090,000 shown on p. 230 of the 1929 Year Book, the error being due to the dropping out of a figure. [2]Revised since the publication of the 1933 Year Book.

Total Acreages and Values, 1929-1934.—Table 4 shows for Canada and the provinces, for the last six years, the total estimated areas and values of field crops, Table 5 the field crops of Canada compared as to quantity and value for 1933 and 1934, and Table 6 the areas, yields and values of the principal field crops in Canada, by provinces, for the years 1933 and 1934.

Acreages under Pasture.—Table 7 gives the estimated acreages under pasture in Canada, by provinces, for the years 1928 to 1934.

7.—Estimated Acreages under Pasture in Canada, 1928-34.

Province.	1928.	1929.	1930.	1931.	1932.	1933.	1934.
	acres.	acres.	acres.	acres.	acres.	acres.	acres.
P.E. Island	250,092	244,729	246,592	235,000	210,200	209,700	203,600
Nova Scotia	866,100	866,204	866,818	866,500	704,100	704,100	709,400
New Brunswick	500,772	487,840	490,500	474,600	518,300	516,300	535,800
Quebec	3,858,181	3,944,443	3,950,000	3,686,100	2,669,600	2,843,700	2,919,700
Ontario	3,000,172	3,134,614	3,149,460	3,031,717	3,012,500	2,995,500	2,908,300
Manitoba	252,689	253,950	264,300	239,800	232,100	246,700	232,200
Saskatchewan	408,670	406,100	419,000	400,300	444,900	451,600	453,900
Alberta	289,973	319,338	396,400	384,900	350,500	220,000	261,800
British Columbia	62,192	63,865	66,604	69,272	76,500	80,200	86,500
Indian Reserves	39,202	47,237	39,839	39,913	46,000	49,200	42,200
Totals	**9,528,043**	**9,768,320**	**9,889,513**	**9,428,102**	**8,264,700**	**8,317,000**	**8,353,400**

The foregoing figures are not entirely comprehensive since the figures for the Maritime Provinces, Quebec and Ontario include all pasture, seeded and natural, while the figures for the four western provinces are "seeded pasture" only. Most of the area used for pasture in these provinces is "natural" and data on land used in this way can only be properly secured at the quinquennial census. At the Census of 1931, the acreages of improved and natural pasture in the three Prairie Provinces were as follows:—

Province.	Improved Pasture.	Natural Pasture.
	acres.	acres.
Manitoba	411,924	3,601,644
Saskatchewan	712,371	15,755,179
Alberta	524,586	15,960,335

The areas under grazing leases in the Western Provinces as at Mar. 31, 1932-34, are reported by the provincial lands administration branches as follows:—

Province.	1932.		1933.		1934.	
	Number of Leases.	Acres.	Number of Leases.	Acres.	Number of Leases.	Acres.
Manitoba	245	103,314	239	132,111	217	126,314
Saskatchewan	6,923	3,731,668	5,910	4,539,350[1]	7,555	4,228,830
Alberta	3,948	3,367,150	3,708	3,172,839	3,775	3,186,838
British Columbia	732	64,153	777	73,771	875	100,291
Totals	11,848	7,266,285	10,634	7,918,071	12,422	7,642,273

[1] Includes provincial forests and school lands grazing permits covering 742,920 acres for which the numbers of leases are not known.

Average Yields per Acre.—Table 8 gives, for the years 1927 to 1934, the average yields per acre of the various field crops, together with the long-time average yields per acre.

8.—Annual Average Yields per Acre of Field Crops for Canada, 1927-34, with Long-Time Averages.

Distribution of Wheat and Oat Crops.—The distribution of the wheat crop of Canada for the years ended July 31, 1933 and 1934, is calculated in Table 12.

12.—Distribution of the Canadian Wheat Crops, by crop years, 1932-33 and 1933-34.

NOTE.—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to 4½ bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book, 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1933.

Item.	Crop year ended July 31, 1933.	Crop year ended July 31, 1934.	Item.	Crop year ended July 31, 1933.	Crop year ended July 31, 1934.

Imports	173	413	Milled for food	43,621	43,621
Available for distribution	565,771	480,537	Carry-overs, July 31, 1933 and July 31, 1934	211,740	193,323
			Balances otherwise disposed of	— 9,168	5,633

Table **13** presents similar data for oats. The bulk of this crop is consumed as feed for live stock and the table shows approximately how the remaining portion of the crop is disposed of, including: the quantities exported as grain, oatmeal and rolled oats; the quantity retained for seed; and the quantity milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity used in Canada for feeding to live stock, this amount being estimated at 317,442,000 bushels in 1932-33 and 260,531,000 bushels in 1933-34.

13.—Distribution of the Canadian Oat Crops, by crop years, 1932-33 and 1933-34.

Item.	Crop year ended July 31, 1933.	Crop year ended July 31, 1934.	Item.	Crop year ended July 31, 1933.	Crop year ended July 31, 1934.

Exports as grain	11,076	6,088			

Per Capita Consumption of Wheat in Canada.—According to revised calculations, the average per capita consumption of wheat ground for human food in Canada during the ten years 1924 to 1933 was 4·3 bushels. The average range for the period was between 4·0 and 4·5 bushels. The average consumption in 1933 was estimated at 4·1 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book, while annual estimates are published in the April number of the Monthly Bulletin of Agricultural Statistics.

Subsection 3.—Farm Live Stock and Poultry.

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table **14**, while some authoritative details will be found in the article "The Development of Agriculture in Canada", contributed by Dr. J. H. Grisdale to the 1921 Year Book, where it appears at pp. 202-210.

14.—Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931.

Production and Value of Wool.—The production of wool in Canada is placed at 19,544,000 lb. from 3,423,951 sheep and lambs in 1934 as compared with 19,268,000 lb. from 3,388,552 sheep and lambs in 1933. Table **18** gives the total estimated production and value of wool for the years 1915 to 1934.

Subsection 4.—Dairying Statistics.

As the Agricultural Statistics Branch of the Dominion Bureau of Statistics was engaged in a revision of the dairying statistics of Canada at the time that this chapter of the Year Book was going to press, it was decided to transfer this subsection to Appendix II. (For page reference see Index.)

Subsection 5.—Fur Farming.*

Origin of Fur-Farming Industry.—A short account of the origin of the fur-farming industry in Canada was given on p. 249 of the 1929 edition of the Year Book. A fuller description of the rise of the industry in Prince Edward Island, its original home, was given in the Census and Statistics Monthly for May, 1914, at p. 110, while a still more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

Fur Farms of Canada.—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a distinct branch of the operations. Such farms increased in numbers from 429 in 1919 to 6,392 in 1933, or, if muskrat and beaver farms are included, to 6,473, and the industry is still growing in number of farms and varieties of fur-bearing animals on these farms, although its revenue has suffered from the effects of the low price levels of the past three years for live animals and pelts of all kinds. Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, marten, fisher and fitch. Mink farms are now the most numerous of the miscellaneous class, raccoon farms coming second. A few of the fox farms also raise miscellaneous fur-bearing animals in addition to the foxes.

Capital Investment.—The earliest Dominion-wide statistics of fur farms were collected for the year 1919, and since then annual statistics have been obtained. Statistics showing the numbers and values of fur-bearing animals on fur farms are given in Tables **19** and **20.** The capital investment in lands and buildings in 1933 was $6,265,201, making a grand total investment of $13,774,768 in the industry in that year.

* Revised by Miss F. A. Brown, Chief, Fur Statistics Branch, Dominion Bureau of Statistics. A list of publications of this Branch will be found in Chapter XXIX. For further particulars regarding fur farming the reader is referred to the Report on Fur Farms, 1933, which may be obtained from the Dominion Statistician, Ottawa.

[1] Based on estimates furnished by the operators of the farms.

Annual Revenue.—The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table **21** shows the sales of animals by kinds in the years 1925 to 1933 and Table **22** the sales of pelts. During the four latest years the sales of pelts have exceeded the sales of live animals, while in former years the reverse was the case.

The Provincial Distribution of Fur Farming.—The statistics of Table **23**, showing the capital investment in the industry by provinces, indicate that Prince Edward Island no longer holds its earlier margin of supremacy in the industry. In recent years the larger and more populous provinces of Quebec and Ontario have exceeded Prince Edward Island in the number of fur farms and in the capital invested in fur-bearing animals as well as in land and buildings used for fur farming.

Subsection 6.—Horticulture.

The statistical treatment of horticulture is necessarily confined to commercial fruit growing, vegetable growing and floriculture, although production in private gardens for home use is unquestionably in larger volume than production for sale in the case of vegetables and flowers. Of the three branches of commercial horticulture, fruit growing is the most important.

The native fruits of Canada, with the exception of the blueberry and the cranberry, are not cultivated on a commercial scale. Among the introduced fruits, the apple holds the premier place in Canadian fruit growing, the value of the commercial production of this fruit averaging about 10 million dollars annually for the 5 years 1929-33. An important subsidiary of the grape-growing industry is the manufacture of native wines, which increased from an estimated value of $560,000 in 1917, the earliest year available, to $5,541,000 in 1929, with an estimated value of $2,646,000 in 1933. For a fuller discussion of fruit farming in Canada, the reader is referred to pp. 242-247 of the 1931 edition of the Year Book. Closely associated with fruit farming is the tree nursery industry.

Satisfactory annual statistics are not available at present regarding the commercial production of vegetables, but important information on the subject is obtained through the decennial census and will be found under census statistics.

Census Statistics of Fruit and Vegetable Production.—Much of the most valuable statistical information regarding the production of fruit and vegetables in Canada can be obtained only through the medium of the decennial censuses.

Fruit.—In the course of each census a record is obtained of the numbers of the different kinds of fruit trees and of grape vines of bearing age or planted out but not yet of bearing age at the date of the census, in addition to the acreage devoted to orchard, vineyard and small fruit. Furthermore, an accurate check is made upon the annual estimates of fruit production by obtaining from each producer a statement of the quantities and values of different kinds of fruit produced. Such information obtained through the census is summarized in Tables **24, 25** and **26.** A notable fact shown in Table **24** is that the number of bearing trees of each kind of fruit as well as the total acreage in orchard was less in 1931 than in 1921 or 1911. In fact there has been a progressive decline in every tree fruit except the peach. Furthermore, with the same exception, the number of young trees planted out but

not yet bearing was smaller in each case than at the two former censuses, which appears to indicate a continuation of the decline. In the case of peaches the figures point to the probability of some prospective increase in acreage. In the case of grapes, the Census of 1931 showed a large increase in bearing vines, while the number of young vines not yet bearing indicated the possibility of a further increase of more than 50 p.c. in productive vineyard. The total acreage of vineyard was at a record level. The acreage devoted to small fruits has shown very little expansion over the past 20 years.

Table **25** shows the comparatively small number of specialized fruit farms in Canada in 1931. Of 728,244 occupied farms only 7,977 or 1·1 p.c. reported more than 300 trees. Only those farms enumerated in the last two columns, that is, with over 300 trees, can really be considered as specialized fruit farms, since 300 trees represent 7 to 10 acres of apples or 3 to 4 acres of other tree fruits. If the analysis could be carried further to show the total of trees on farms in each group it is probable that a large proportion of the total trees would be found to be on the farms with over 300 trees per farm. It may be observed that by far the largest numbers of specialized fruit farms are in the groups containing from 10 to 200 acres.

Table 26 shows that, in spite of the decline in bearing trees, when allowance is made for annual variations in crops, production has been fairly well maintained, due, no doubt, to the trend for fruit production to shift from an incidental department of the general farm to the specialized commercial fruit farm, where improved practices are followed in the selection of productive varieties and in general methods of culture. In small fruits there was a notable increase recorded in 1930 in the production of loganberries, while the production of currants and gooseberries has declined to little more than a third of that of 1910.

Vegetables.—In view of the fact that so large a proportion of vegetables are grown either in gardens for home use or else are sold directly from producer to consumer on public markets in urban centres, an accurate record of production can only be obtained through the individual enumeration at the decennial census. The total value of vegetables grown on farms in 1930 was $28,071,354, of which total $15,374,684 represented the value of vegetables grown on farms for home use and $12,696,670 vegetables grown on farms for sale. Comparable figures for 1920, when the general price level was very much higher, were: total value $20,073,782; for home use $13,907,856; and for sale $6,165,926. The figures for either census do not include vegetables grown elsewhere than on farms, *i.e.*, in the private lots and gardens of people other than farmers and market gardeners. The statistics of Table 27 deal only with vegetables grown for sale by farmers and market gardeners and are exclusive of vegetables grown for home use which in both censuses had a larger value and are also exclusive of vegetables grown elsewhere than on farms. The figures indicate a large expansion in the production of vegetables for sale during the decade. The expansion has been particularly marked in those vegetables, such as tomatoes, sweet corn, green beans, green peas and asparagus, which form the chief crops for the vegetable-canning industry.

[1] Revised since the publication of the 1933 Year Book.

The Tree Nursery Industry.—The first Canadian commercial nursery was established near Fonthill, Ont., and it was followed within a few years by the establishment of a nursery in Toronto by a Rochester, N.Y., firm. Since that time the industry has steadily spread as the country has developed, until to-day there are approximately 248 firms growing or dealing in nursery stock of all kinds, including fruit trees.

Subsection 7.—Special Agricultural Crops.

Maple Syrup and Sugar.—The Canada Year Book, 1924, contained on pp. 247 and 248 a description of the process of making maple sugar. Table **31** gives the production and value of maple sugar and syrup in Canada for the years 1932, 1933 and 1934 as estimated by the Dominion Bureau of Statistics.

31.—Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1932-34.

Province and Year.	Maple Sugar.			Maple Syrup.			Total Value of Sugar and Syrup.

[1]Revised since the publication of the 1933 Year Book.

The table shows that for the whole of Canada there were estimated increases of 254,620 lb. of maple sugar and 137,117 gal. of maple syrup and an increase of $320,089 in the combined value of the two products in 1934 as compared with 1933.

Sugar Beets and Beetroot Sugar.—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factories, Ltd., with a plant at Raymond, Alberta. Table **32** shows the area, yield and value of sugar beets grown in Canada in the years 1924-33.

32.—Acreages, Yields and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1924-33.

The yields in 1933 of the largest beet-growing countries, in thousands of short tons, were as follows: Russia, 9,921; Germany, 9,457; United States, 11,030; France, 8,224; Czechoslovakia, 3,212; Poland, 2,042; Italy, 2,363; England and Wales, 3,360; Belgium, 1,671; Netherlands, 2,148; Austria, 1,177.

Tobacco.*—In 1933, the commercial tobacco crop of Canada amounted to 39,400,000 pounds from 39,400 acres, as compared with 54,094,000 pounds from 54,094 acres in 1932. The farm value of the tobacco crop in 1933 is estimated at $5,201,490 as compared with $6,088,300 in 1932.

Table **33** lists the acreages, quantities produced and average yields per acre for 1900, 1910, and 1920 to 1933. The acreages for 1911, 1921 and 1931 are also the comprehensive figures of the census. For the inter-censal years, the acreage and production statistics quoted relate to the commercial crop only. This distinction is much more necessary in Quebec than in Ontario, since a considerable part of the tobacco production of Quebec comes from small plots.

1934	5,965	41,755	45,000	4,361	128,268	7,200	114,450	249,918

Hives and Honey.—The number of hives of bees in Canada was 189,986 in 1901, 180,372 in 1911, 185,530 in 1921 and 279,453 in 1931. The quantity of honey produced was 3,569,567 lb. in 1900, 6,089,784 lb. in 1910, 6,370,300 lb. in 1920 and 18,459,972 lb. in 1930. The above figures show that there has been a pronounced expansion in apiculture in the decade from 1920 to 1930 which is covered by Table **35.** Ontario and Quebec have always been the chief honey-producing provinces, but, while these two provinces produced nearly 95 p.c. of the total for Canada in 1920, in 1930 their production was little over 80 p.c. of the total. The most notable development of the decade was the great increase in both the number of hives and the production of honey in the Prairie Provinces. In 1920 the production of these three provinces amounted to only 2 p.c. of the total for Canada, while in 1930 it had increased to over 16 p.c. of the total.

There are at present no uniform annual statistics of hives and honey for all the provinces, but a synopsis of the existing provincial estimates for recent years was given in the Monthly Bulletin of Agricultural Statistics for March, 1934. These estimates show a honey production in 1933 amounting to 19,543,500 lb., the average value per lb. 9 cents and the total value $1,706,800.

Subsection 8.—Farm Labour and Wages.

Average Wages of Farm Help.—The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, while from 1923 until 1929, there was little change. The years 1930 to 1933 showed continuous marked reductions in the average value of yearly wages and board, following the downward trend of the prices of farm produce. In 1934 slight increases were registered.

In Table 36 the values of wages and board are given for the years 1914, 1920, 1930 and 1932-34, both for the summer season and for the year, distinction being made in all cases between wages and board.

36.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930 and 1932-34.

Subsection 9.—Prices of Agricultural Produce.

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flax and rye in the Winnipeg market—basis, in store at Fort William and Port Arthur—will be found for each month from January, 1933, to December, 1934, in Table **37.** The average yearly prices of home-grown wheat, barley and oats in England and Wales are furnished in Table **38;** in this table British currency is converted into Canadian currency at par rate of exchange (£=$4.86). The average monthly prices of flour, bran and shorts at Montreal, Toronto, Winnipeg, Minneapolis and Duluth for 1933 and 1934 are given in Table **39.**

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg and Edmonton are given for 1932 and 1933 in Table **40** and the average monthly prices in 1933 and 1934 at these centres and at Calgary in Tables **41** and **41A.**

37.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flax and Rye—basis, in store at Fort William and Port Arthur—1933-34, and Yearly Average Prices for crop years ended July 31, 1926-34.

Index Numbers of Agricultural Prices.—Records of the average prices received by farmers for their crops have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office or the Dominion Bureau of Statistics. From these records, annual index numbers have been calculated for each crop and for the field crops as a whole. In calculating the index numbers in the present instance, the base period used is 1926. Index numbers have been calculated of the yields of the various crops from year to year. From these data index numbers of the value of all field crops, weighted according to the quantity produced in each case, have been obtained. The results of these calculations are presented in Table 42.

42.—Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1913-34.

NOTE.—Average Prices, 1926 = 100.

For the formulæ used in the calculation see Monthly Bulletin of Agricultural Statistics, January, 1935, p. 18.

[1]Prices quoted are per bushel, except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. For details of index numbers by provinces, see Monthly Bulletin of Agricultural Statistics, January, 1935, pp. 18-25. [2] Revised since the publication of the 1933 Year Book.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, recovered strongly in 1929 but declined rapidly to reach the record low of 43·1 for the 1932 crops. All the crops contributed to this sharp decline, although the grain crops dependent upon overseas markets suffered the most. The forage crops and sugar beets, which are used within the country, held up well in price, but climatic conditions did not favour high yields, so the values were lower.

During the past two years there has been a considerable improvement in the prices of these field crops. Grain prices began to rise in May, 1934, which benefited the late marketings of the 1933 crops and prices have held steadily higher during the marketing period of the 1934 crop to date. Fodder and hay prices have risen materially because of the short crops and good demand. In fact, only potatoes, turnips and sugar beets have lagged in the general advance. The general index rose from 43·1 in 1932 to 55·7 in 1933 and 67·0 in 1934.

Subsection 10.—Agricultural Statistics of the Census.

A selection of the more important agricultural statistics of the Census of 1921 was published at pp. 269-271 of the 1929 edition of the Year Book. Further, certain agricultural statistics of the Prairie Provinces collected at their Quinquennial Census of 1926 were published at pp. 271-273 of the same volume. The complete agricultural statistics of the Census of 1921 are published in Volume V of the publications of the census of that year, while the detailed agricultural statistics of the Census of the Prairie Provinces of 1926 will be found in the reports of the census of that year, issued separately for the provinces of Manitoba, Saskatchewan and Alberta. The agricultural statistics of the Census of 1931 are to be published as Volume VIII, Census of 1931.

A summary of the more important miscellaneous agricultural statistics compiled from this latest census follow in this subsection. These deal with: farm tenure, values, indebtedness and expenditures (Table **43**); farm population and farm workers (Table **44**); and farm machinery and facilities (Table **45**).

Farm Tenure, Values, Indebtedness and Expenditures.—Table **43**, pp. 296-297, gives final results of the Census of Agriculture taken as of June 1, 1931, regarding tenure of occupied farms and of farm areas, farm values, mortgage indebtedness and expenditures. The outstanding feature of the table is the decrease shown in the number of owned farms and the large increases in the other two classes "partly-owned, partly-rented" and "occupied by tenants" as compared with the Census of 1921. The percentage of all farms fully owned, for the whole of Canada, has decreased from 86·52 p.c. in 1921 to 80·05 p.c. in 1931. The large acreage in the "partly-owned, partly-rented" type in the western provinces is due to the fact that most ranches are composed of small acreages actually owned and additional large acreages of pasture leased from the governments.

Farm values, when compared with 1921, show that for Canada as a whole they have decreased by 20·33 p.c.; most of this decrease has been suffered by land and live stock, the former accounting for 74·9 p.c. of the total decrease and the latter 21·8 p.c. Generally speaking the eastern provinces show a smaller decline in values than the Prairie Provinces.

43.—Tenure of Farms by Numbers and Areas, Farm Values, Mortgage Indebtedness and Farm Expenditures, by Provinces, Census of 1931.

[1] Include farms occupied by managers. [2] Include mortgage debt on owned parts of farms only. [3] The term "fully-owned" as employed here means the owners who own all of their farms and does not include the owned part of the farms partly owned and partly rented. [4] Include taxes on owned farm property only. [5] This item represents "cash" paid in each case and does not include the values of products paid by share tenants. [6] Farm expenditures were taken for 1930, the latest complete calendar year previous to the census.

43.—Tenure of Farms by Numbers and Areas, Farm Values, Mortgage Indebtedness and Farm Expenditures, by Provinces, Census of 1931—concluded.

[1] Include farms occupied by managers. [2] Include mortgage debt on owned parts of farms only. [3] The term "fully-owned" as employed here means the owners who own all of their farms and does not include the owned part of the farms partly owned and partly rented. [4] Include taxes on owned farm property only. [5] This item represents "cash" paid in each case and does not include the values of products paid by share tenants. [6] Occupied farm lands in the Northwest Territories and Yukon have an area of approximately 5,000 acres (see Table **1**, Chapter XXVIII). [7] Farm expenditures were taken for 1930, the latest complete calendar year previous to the census.

Statistics covering mortgage indebtedness were compiled for the first time for Canada in 1931. Every farm owner was asked for a statement of the mortgage debt on his farm. The instructions to enumerators read as follows: "The mortgage debt to be reported includes not only the debt secured by an instrument called a 'mortgage' but also debts protected by deeds of trust, judgments or by any other legal instrument that partakes of the nature of a mortgage and which has the same legal effect. It has reference only to a debt secured by a mortgage, or by an equivalent legal instrument on lands and buildings". This, however, does not represent all the farmers' obligations as it covers only land operated by the owners themselves. The total mortgage debt reported on owned farm land in Canada amounted to $671,776,500 on June 1, 1931. This amount was distributed among the provinces as follows: Ontario 29·74 p.c., Saskatchewan 26·16 p.c., Alberta 16·00 p.c., Quebec 14·35 p.c., Manitoba 8·82 p.c., British Columbia 2·26 p.c., Nova Scotia 0·98 p.c., New Brunswick 0·97 p.c., and Prince Edward Island 0·72 p.c.

In order to state the ratio of the mortgage debt to the value of the farms, only the "fully-owned" farms were considered, because in the case of the "partly-owned, partly-rented" farms the value of the farm was stated as a whole, consequently it is impossible to determine the value of the part which was owned. Since the number of fully-owned farms represents over 79 p.c. of the total, the sample is sufficiently large to be representative of the whole. For the Dominion as a whole 35·56 p.c. of the fully-owned farms reported mortgage debts. This percentage was distributed as follows: Prince Edward Island 33·49 p.c., Nova Scotia 10·35 p.c., New Brunswick 17·61 p.c., Quebec 31·74 p.c., Ontario 40·82 p.c., Manitoba 39·68 p.c., Saskatchewan 46·04 p.c., Alberta 39·62 p.c., and British Columbia 25·88 p.c. The ratio of the mortgage debt to the value of the mortgaged farm is as follows: Canada 40·86 p.c., Prince Edward Island 33·74 p.c., Nova Scotia 40·45 p.c., New Brunswick 38·26 p.c., Quebec 38·27 p.c., Ontario 44·79 p.c., Manitoba 49·46 p.c., Saskatchewan 38·11 p.c., Alberta 38·75 p.c., and British Columbia 34·76 p.c.

Statistics of farm expenditures are also given in Table **43.** The figures of taxes are for farms occupied by owners only and therefore do not represent the whole amount of taxes paid. There are no comparable figures for previous censuses, since this information was first asked for on the schedules of 1931.

The expenditure for feed has decreased generally in all the provinces from 1921 to 1931, but the indications are that the decreases are not in the quantities bought but in the prices which prevailed. There has been an increase in the use of fertilizers since 1921. This increase has taken place mostly in Ontario and the Maritime Provinces and may be associated with the growing of potatoes and fruits.

Information relating to cash expenditure for electric light and power and for spraying chemicals was obtained for the first time in 1931.

The amount of money expended for labour may be taken as an index of the changes which have taken place in methods of farming during the period 1921-31. Compared with 1921, there has been an increase in money spent for hired labour in the Maritime Provinces, where specialized farming requiring manual labour has been developed during the past decade. There was, however, a decrease in labour costs in most of the other provinces where improved machinery has done away to a large extent with the necessity of using manual labour.

Farm Population and Farm Workers.—Table 44 shows the number of farm workers in 1930, made up of male and female members of the family and permanently and temporarily hired men. It should be pointed out in connection with the number of temporarily employed men that these represent help for seasonal work from farm to farm such as fruit picking, crop harvesting, etc., and therefore the same individual may be counted a number of times from a number of different farms.

Unfortunately, no really comparable statistics are available from the Census of 1921, which recorded only the cost of hired farm help amounting to $131,677,166 for Canada in 1920 as compared with $100,425,980 in 1930, but general wage rates were at a very much higher level in 1920 than in 1930. The most instructive figures in Table 44 are those showing the number of members of the family who were farm workers and the number of weeks of hired labour. In Canada as a whole farm workers who were male and female members of the family constituted 33·2 p.c. of the total farm population.

Of the 728,623 farms in Canada only 281,044 or 38·6 p.c. employed hired help. The percentage of farms employing hired help was highest in Ontario with 44·6 p.c. and Prince Edward Island with 43·2 p.c. and lowest in Nova Scotia with 27·9 p.c. and Quebec with 28·2 p.c. On those farms reporting hired labour there was an average of 26·2 weeks of such labour for the whole of Canada, 17·1 weeks in Prince Edward Island, 18·3 in Nova Scotia, 16·9 in New Brunswick, 20·5 in Quebec, 28·3 in Ontario, 31·2 in Manitoba, 27·1 in Saskatchewan, 26·3 in Alberta and 37·5 weeks per farm reporting help in British Columbia. The average cost of hired labour per week was highest in Alberta, British Columbia and Saskatchewan and lowest in Prince Edward Island.

44.—Farm Population, Workers, Weeks of Hired Labour and Cost of Labour, by Provinces, Census of 1931.

NOTE.—The numbers of farms and of farm population are as of June 1, 1931. The remaining statistics apply to the calendar year 1930.

[1] Includes population on farms located in urban localities. For this distribution of rural and urban farm population by provinces, see Table 43, p. 156.

Farm Machinery and Facilities, 1931.—The data of Table 45 record an attempt to determine changes in the general economic condition of agriculture and of the farming population in Canada, represented by mechanical equipment for the farm, conveniences for the household, and communication with the main centres of population. In 1931 information was collected upon a number of items for the first time.

With regard to farm equipment, naturally the Prairie Provinces with their tendency to specialize in grain crops show a greater concentration than other provinces of grain-harvesting machinery such as binders, headers and combines. In Ontario, on the other hand, there were 18·5 silos per 100 farms, 7·8 in British Columbia and 4·5 in Quebec, while the highest percentage in any other province was 0·8 in Manitoba. In 1931, for the whole of Canada, there were 50·7 automobiles or motor trucks per 100 farms as compared to 22·1 in 1921. The proportion was highest in Ontario with 73 vehicles per 100 farms, next in Saskatchewan and British Columbia with 55·7 each, and lowest in Quebec with 23·6. The number of tractors reported increased from 47,455 in 1921 to 105,360 in 1931. The number of tractors per 100 farms in 1931 was 31·7 in Saskatchewan, 26·5 in Manitoba and 24·6 in Alberta, while Ontario, which was the highest of the other provinces, had only 9·8 per 100 farms.

In the Census of 1931, 233,962 farms reported telephones as compared with 231,725 in 1921, Manitoba, Saskatchewan and Alberta showing decreases, while all the other provinces showed increases. In 1931, 73,351 farms, or 10 p.c., reported gas or electric light as compared with 26,842, or 4·2 p.c., in 1921. In British Columbia 24·5 p.c. of the farms had this convenience, 16·8 p.c. in Ontario, 14·0 p.c. in Quebec, 9·5 p.c. in Nova Scotia and only 2·8 p.c. to 3·6 p.c. in the Prairie Provinces. Water facilities were reported for the first time in 1931. In Quebec 31·9 p.c. of the farms had water piped in the kitchen, 31·2 p.c. in British Columbia, 11·2 p.c. in New Brunswick, 10·4 p.c. in Ontario, 10·2 p.c. in Nova Scotia, and only from 1·4 p.c. to 2·1 p.c. in the Prairie Provinces. Comparatively few farms, less than 5 p.c. in Canada, had water piped in bathrooms, the percentage varying from 20 p.c. in British Columbia and 8·2 p.c. in Quebec down to only 1·2 p.c. in Saskatchewan. On the whole there appears to be plenty of room yet for improvement in the provision of farm facilities and household conveniences in Canadian rural life.

No information is available regarding the types of road on which farms were located in 1921, but undoubtedly there was great improvement in this respect between then and 1931. (See Chapter XVIII, Part V, of this volume.) In 1931 the percentage of all farms located on unimproved dirt roads for each of the provinces was: Canada 22·0 p.c.; Prince Edward Island 26·6 p.c.; Nova Scotia 21·4 p.c.; New Brunswick 13·3 p.c.; Quebec 22·2 p.c.; Ontario 9·8 p.c.; Manitoba 30·4 p.c.; Saskatchewan 32·0 p.c.; Alberta 31·8 p.c.; and British Columbia 14·3 p.c.

Questions were asked in the Census of 1931 relating to the distance farms were located from a market town and a railway station. The results regarding the distance from a market town were not very dependable, as there was room for a difference in interpretation concerning what constituted a market town. In the case of distance from a railway station only 6·6 p.c. of all farms in the Dominion reported this as 15 miles or more. By provinces, the farms so reporting were: 0·9 p.c. in Prince Edward Island; 14·6 p.c. in Nova Scotia; 5·3 p.c. in New Brunswick; 8·3 p.c. in Quebec; 2·6 p.c. in Ontario; 3·0 p.c. in Manitoba; 5·4 p.c. in Saskatchewan; 12·8 p.c. in Alberta; and 11·4 p.c. in British Columbia.

45.—Farm Machinery, Facilities, Kinds of Road and Distances to Market Town and Railway Station, by Provinces, 1931.

Subsection 11.—Miscellaneous Agricultural Statistics.

Agricultural Irrigation.*—The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation and other purposes and the granting of licences for such purposes are dealt with thereunder. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (R.S.A., 1922, c. 114) and amending statutes provide for the formation of irrigation districts, and authorize the raising of loans under by-laws adopted by the voters of the district. Table 46 gives statistics of the larger irrigation projects in Alberta for the years 1932 and 1933.

46.—Major Irrigation Projects in Southern Alberta, 1932 and 1933.

The Canadian Pacific Railway Co. has constructed, and is operating in Alberta, three large projects known as the Eastern, Western and Lethbridge sections, the last named being the oldest irrigation project in Alberta. The area irrigable by these projects is 557,980 acres. By agreement with the Canadian Pacific Railway Co., the Taber, Magrath and Raymond irrigation districts procure their water supply from the main canal of the Lethbridge section, a further 43,603 acres being served by the canals of these districts.

*Revised by L. C. Charlesworth, Irrigation Council, Water Resources Office, Edmonton, Alberta.

The total irrigable area served by the Canada Land and Irrigation Co.'s project is 130,000 acres, while the New West irrigation district, by agreement with the Canada Land and Irrigation Co., receives a water supply for a further irrigable area of 4,563 acres.

In addition to the irrigated tracts enumerated in the foregoing table, there were, at Dec. 31, 1932, about 343 privately owned projects in Alberta, with a possible irrigable area of 54,930 acres, and at Dec. 31, 1933, 348 projects with a possible irrigable area of 55,617 acres.

Average Value of Farm Lands.—Statistics showing the average value of farm lands in Canada in 1910 and from 1917 to 1934, are given in Table **47.** The values are as estimated by crop correspondents and show the rise in land values between 1910 and 1920, the general decline with moderate fluctuations from 1920 to 1929, and the rapid fall since 1929 to a point below the 1910 level for the country as a whole.

47.—Average Values per Acre of Occupied Farm Lands[1] in Canada, as Estimated by Crop Correspondents, 1910 and 1917-34.

[2] Actual returns were not collected from crop correspondents in Saskatchewan for 1924, and the estimate of 1924 is interpolated.

Subsection 12.—International Agricultural Statistics.

World Production of Cereals and Potatoes.—Table **48,** constructed from data published by the International Institute of Agriculture, shows the areas and yields of wheat, oats, barley, rye, corn and potatoes for the years 1933 and 1934 in countries of the Northern Hemisphere, and for the years 1933-34 and 1934-35 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1928-32 (1928-29 to 1932-33), and the areas and yields of 1934 (1934-35) are compared in percentages with those of the five-year period.

48.—Acreages and Yields of Cereals and Potatoes in Countries of the World, 1933 and 1934, with Five-Year Average for 1928-32.

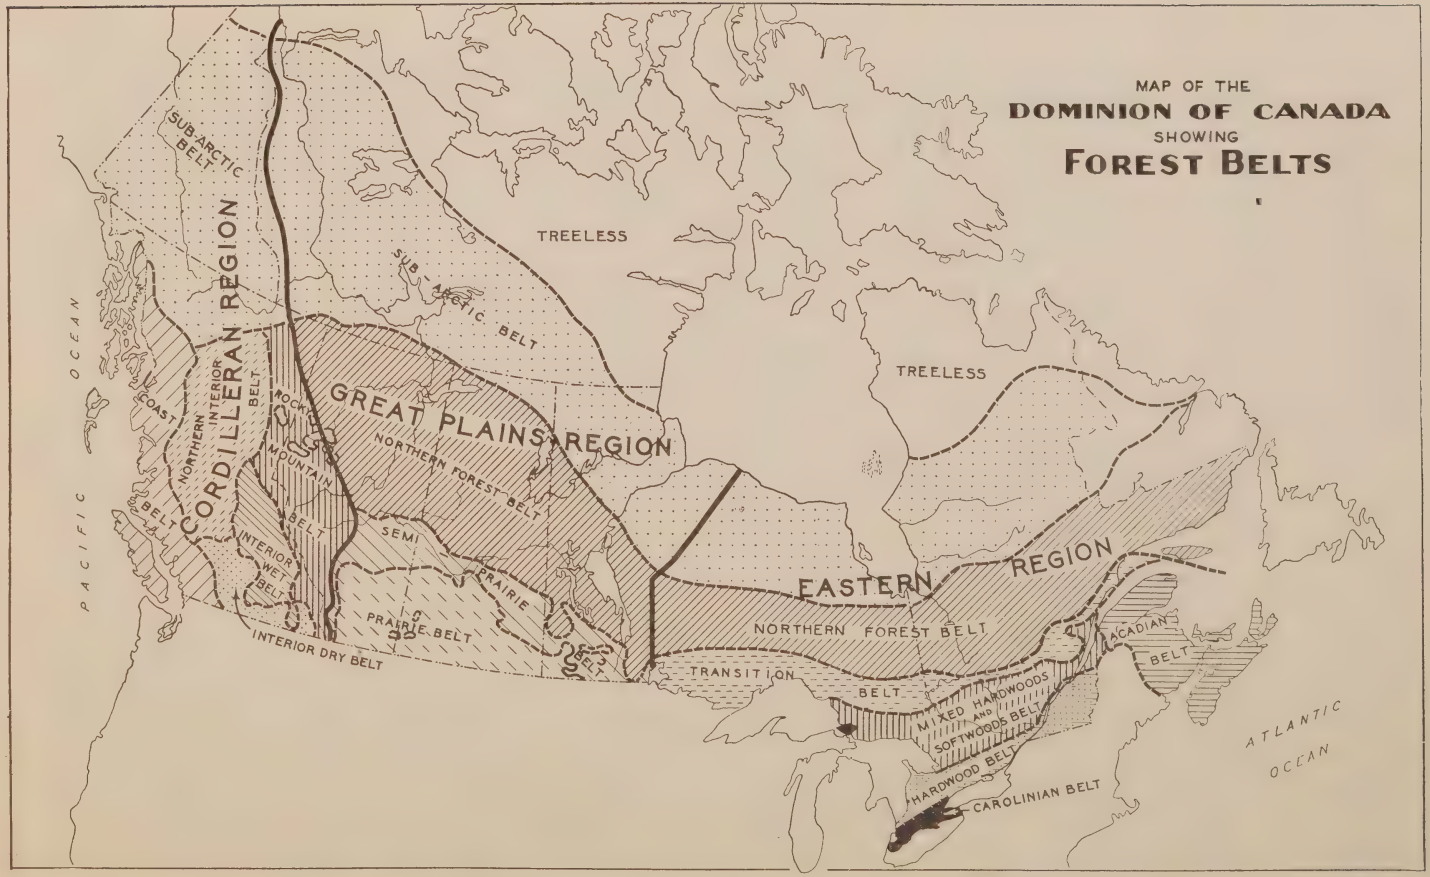
CHAPTER IX.—FORESTRY.*

Section 1.—Physiography, Geology and Climate as Affecting the Forests.



The Dominion of Canada may be roughly divided into three main drainage areas—the Pacific slope west of the Rocky mountains; the Great Plains Region draining into the Arctic ocean and Hudson bay; and the basin of the Great Lakes and the St. Lawrence, together with the Maritime Provinces. Each of these three regions supports a distinct type of forest growth.

The Pacific Slope.—The Pacific slope is characterized by several systems of mountains running approximately parallel and extending from the southeast to the northwest. The Rocky mountains vary in elevation from 5,000 to 13,000 feet above sea-level, with numerous peaks extending well above 10,000 feet. Between this system and the Pacific are: the Columbian system, comprising the Selkirk, Monashee and Caribou mountains; the Interior Plateau system; the Cassiar and Yukon systems; the Pacific system comprising the Cascade, Coast and lesser ranges, terminating with the sunken Insular system whose upper elevations form Vancouver island, the Queen Charlotte group and other coast islands. The chief rivers follow the valleys between these ranges, breaking through in some cases along the shorter cross valleys from east to west.

The Rocky mountains are formed chiefly of Palæozoic rocks, as are also the islands off the coast. The Coast range is almost entirely granitic and the Selkirks are Precambrian or Cambrian. The intervening ranges are of mixed formations, varying from rocks of sedimentary origin to granites. The best soil in British Columbia is concentrated in valley bottoms or alluvial deltas, and the purely agricultural area has been estimated at about 10 p.c. of the land area.

The climate along the coast is mild and humid, with a mean annual temperature varying from 44° to 49° F. The precipitation is the heaviest in Canada, varying from 40 to 120 inches. The greater part of this precipitation falls during autumn and winter, only 30 p.c. falling during the growing season, to which fact is sometimes ascribed the scarcity of deciduous-leaved forest growth, which requires more moisture during the growing season. In any case, coniferous tree growth in this region is the most luxuriant in Canada and the forests have the most rapid rate of growth, the largest individual trees and the heaviest stands of timber extending from sea-level up to elevations of 3,500 or 4,000 feet. The Interior Dry Belt of British Columbia has a low annual precipitation, varying from 10 to 20 inches. Extremes of temperature from 100° F. to −45° F. make this a region unfavourable to tree growth. The winds from the Pacific, which precipitate most of their moisture on the Coast and Cascade mountains, cross this interior plateau, leaving its southern part in a semi-arid state, and give up a large part of what moisture remains when they reach the Selkirk and Rocky mountains, forming what may be termed the Interior Wet Belt, centred in the Columbia valley. Here the precipitation averages over 30 and sometimes reaches 60 inches, taking the form of snow in higher altitudes. Temperatures vary from 100° F. to −17° F. In the Rocky Mountain range itself the climate is more extreme and variable than to the westward.

*Material in this chapter has been prepared in co-operation with Roland D. Craig, F.E., of the Forest Service of the Department of the Interior, by R. G. Lewis, B.Sc.F., Chief of the Forest Products Branch of the Dominion Bureau of Statistics. This Branch collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications see Chapter XXIX.

FOREST BELTS OF CANADA

The Great Plains.—East of the Rockies lies the Great Plains Region, composed of a variety of topographical types. From the foothills of the Rockies, the country slopes gradually eastward and northward. The prairie country extends from the International Boundary to the 55th parallel along the foothills, gradually tapering down toward the east to a point near the lake of the Woods. Of this area, 105,000 square miles is now almost entirely treeless, with rich fertile soil, and is at present a purely agricultural or pastoral country. Whether its present treeless condition is due to climatic or other causes is problematical, but the presence of isolated patches of tree growth in situations well protected from fire, the ease with which these natural groves can be increased and new plantations established by artificial planting and protection from prairie fires, would seem to indicate that repeated burning accounts, at least in part, for its present treeless state. The underlying rocks are of the Cenozoic and Mesozoic eras. The climate of Alberta is extremely variable in winter, due to a warm, dry wind known as the *Chinook*, which blows from the south and southwest and extends its influence from the International Boundary to the Peace river and eastward to Regina in Saskatchewan. In summer the isotherms run almost due north and south in Alberta. Rainfall varies from 15 to 20 inches. The temperature in Manitoba has an absolute recorded range of 150°F., with a mean range of 71°. Saskatchewan and Alberta are more temperate, especially where they are affected by the *Chinook*. North of the treeless prairies is a region largely unexplored, covered at first by a comparatively light forest growth which toward the north and east gives way to the sub-Arctic "tundra"—a region of muskeg and bare, glacier-worn rocks of the Laurentian and Precambrian types.

These Laurentian rocks in Canada form the Archæan or Canadian Shield, with a distinct type of topography. This rock formation covers a huge irregular triangle with its apex near the Thousand islands in the St. Lawrence, from which point one arm extends northwesterly to the mouth of the Mackenzie river and the other northeasterly down the St. Lawrence valley to include the Labrador peninsula. This region has been reduced to a peneplainated condition by repeated glacial action which has worn down the high elevations and scoured out most of the soil except in isolated depressions. It is covered with innumerable lakes, muskeg or bog, and rivers. The southern portion of the Shield is to a great extent agricultural land, actual or potential, much of which is still heavily forested. Toward the north tree growth becomes lighter and the climate as a rule becomes too severe for continuous successful agriculture. Still farther toward the north, tree growth ceases and the region merges into the same belt of sub-Arctic "tundra" already mentioned.

The St. Lawrence Basin and the Atlantic Slope.—The basin of the St. Lawrence and Great Lakes contains a variety of topographical and geological types. The north shores of lake Superior and Georgian bay, the upper Ottawa River valley and the southern part of Labrador, are parts of the Laurentian Shield already described. Here the climate is tempered in part by the presence of the lakes and the gulf of St. Lawrence but is, nevertheless, severe and variable. To the south, soil and climate improve, and the southwestern peninsula of Ontario, the north shore of lake Ontario and the St. Lawrence valley are all essentially agricultural land. The rock here is of sedimentary origin, mostly of Palæozoic age.

The Maritime Provinces, with a general slope towards the Atlantic, are varied in topography and geology. The climate resembles that of southern Ontario, being modified by the presence of the ocean. Precipitation is above 35 inches annually. This region supports a type of forest similar to that of the southern portion of the Archæan Shield.

Section 2.—Main Types of Forest Growth.

Physiographic, climatic and soil conditions in Canada favour the coniferous type of forest. While the more fertile portions of Ontario, Quebec and the Maritime Provinces once supported a heavy virgin growth of hardwoods, the greater part of Canada's forest area is covered with spruce, pine, balsam, Douglas fir and other coniferous soft woods. Three main groups of forest growth in Canada follow the main physiographic divisions already mentioned. These groups are the Cordilleran, the Great Plains and the Eastern forests.

The Cordilleran Forests.—The Cordilleran Forest Region extends from the Pacific Coast to the eastern foothills of the Rocky mountains and may be subdivided into the Coast Belt, the Interior Dry Belt, the Interior Wet Belt and the Rocky Mountain Belt. The Coast Belt includes several distinct forest types, their character being determined by variations in climatic and topographic conditions, among which altitude and precipitation have the greatest effect on forest growth. In the southern portion of the belt Douglas fir and red cedar are the principal species at altitudes below 2,000 or 2,500 feet. With these are associated western hemlock, western white pine, Sitka spruce and the *amabilis* and lowland firs. Toward the north and at higher altitudes, Douglas fir disappears and red cedar and hemlock are the important trees, with Sitka spruce, *amabilis* fir and yellow cedar as subsidiaries. On the northern end of Vancouver island, the Queen Charlotte islands and the adjacent coast Sitka spruce and western hemlock form a lowland type.

In the Interior Dry Belt, *ponderosa* or western yellow pine predominates at low altitudes bordering on the grass lands. With rising altitude Douglas fir gradually increases in importance until it predominates at elevations up to 3,500 and 4,500 feet. Western larch covers a limited area usually between the true yellow pine and Douglas fir types. At the northern latitudinal and upper altitudinal limits of the Douglas fir type, an Engelmann spruce type develops, which merges into a spruce-alpine fir type at still higher altitudes. Lodgepole pine has taken the place of Douglas fir, Engelmann spruce and, in some cases, yellow pine on burned-over areas and has become, to a considerable extent, established as a distinct type.

Forest types similar to those of the coast have developed in the Interior Wet Belt. In the southern portion of this belt, red cedar predominates in the wetter situations, mixed with Douglas fir, Engelmann spruce, white pine, hemlock, western larch, alpine fir, lowland fir and cottonwood. On the benches and lower valley slopes, hemlock and cedar are the important species. Engelmann spruce replaces hemlock at higher elevations, cedar gradually disappears and the spruce-alpine fir type stretches up to timber line. To the north, Engelmann spruce and alpine fir are more prominent and the other species are gradually eliminated.

The Rocky Mountain Belt includes portions of the Dry Belt types to the south and those of the Interior Wet Belt further north. Otherwise the typical forest of the Rocky mountains is made up of Engelmann spruce and some white spruce, with an increasing proportion of alpine fir as the altitude increases. This type has suffered so severely from fire, especially on the dry eastern slopes, that lodgepole pine has established itself permanently in some cases and temporarily in others on burned-over areas.

In the Sub-Arctic Belt, comprising the Yukon plateau and that part of the Rocky Mountain system north of 58°, the general elevation is over 4,000 feet, the climate is severe, the growing season short and precipitation scant. As a result, tree growth is slow and confined to favourable sites in valleys. The timber is small

and of poor quality. It is, however, of great local value in the mining industry and to trappers. The principal type is the spruce-alpine fir, with lodgepole pine on poorer sites, and poplar and willow on richer soils on burned-over areas.

Most of the commercially important species of the Cordilleran Region are confined to British Columbia. The spruce-fir-lodgepole pine type of the northern interior extends across the Rockies into the foothills of Alberta. Certain species, such as Douglas fir, Engelmann spruce, alpine fir and lodgepole pine, are also found in western Alberta, but in few cases do they extend any great distance eastward.

The Forests of the Great Plains.—The Great Plains Region may be divided into the Prairie, Semi-Prairie, Northern Forest and Sub-Arctic Belts. There are no great variations in altitude in the region, and latitude and soil conditions, especially drainage, determine the distribution of forest types. The Prairie Belt in southern Alberta, Saskatchewan and Manitoba extends north from the International Boundary for 200 to 400 miles. Patches of tree growth in protected situations are made up chiefly of aspen poplar, with some white spruce and jack pine. North of the prairies there is a transition belt in which a large proportion of the area is covered with poplar interspersed with open grasslands. The soil in this belt is for the most part of agricultural value and the timber of little commercial value except for local consumption. North of this agricultural and pastoral area is the great Northern Forest Belt, from 300 to 400 miles wide, which extends from Alaska to Labrador, covering the greater part of the Laurentian Shield as far as the limits of commercial tree growth. Originally, white spruce predominated over this entire belt and it still forms the most important type commercially, although it has suffered severely through forest fires. In the East, balsam fir is an important associate, and the spruce-balsam fir type makes up most of the pulpwood resources of Eastern Canada. The black spruce type, frequently associated with eastern larch (tamarack), occupies poorly-drained areas within this belt. Large areas in this belt have been burned over and the spruce and balsam replaced, at least temporarily, by aspen and white birch on the heavier soils, and by jack pine on the sandy sites. Jack pine, aspen and balsam poplar reach a higher development along the Peace river in northern Alberta than they do elsewhere in America. Along its northern margin this belt merges into the sub-Arctic "tundra", with tree gowth confined to narrow strips along waterways. Vigorous tree growth and fairly large timber are found along these shallow valleys as far north as 67°, indicating that soil conditions, especially drainage, are more important than climate in defining the limits of tree growth. To the northward, balsam fir disappears early from the forest growth, followed by balsam poplar, jack pine, aspen and paper birch, leaving white spruce, black spruce, tamarack or larch, and willow to define the northern limit of tree growth. This may be roughly indicated by a line drawn from the mouth of the Mackenzie river on the Arctic ocean to the mouth of the Churchill river on Hudson bay and across the Labrador peninsula at about 58° N. latitude.

The Eastern Forests.—In southeastern Canada a number of belts of forest growth with distinctive characteristics are recognized. The hardwood belts include the Carolinian Zone, confined to the north shore of lake Erie and the western part of lake Ontario. This is important only as forming the northern fringe of a type which covers a large area in the central Eastern United States, and includes a number of species such as tulip, sassafras, etc., not found elsewhere in Canada. North of this zone, still in the purely agricultural and pastoral area, the original forests were of the commercially important hardwoods, such as maple, elm bass-

wood, oak, yellow birch, hickory and beech, with patches of pine, hemlock and other conifers on the lighter soils. This area has been largely cleared and devoted to agriculture, and the original forest type is to be seen only on farmers' woodlots.

Since the beginning of the lumbering industry in Canada, the region north of this belt, extending, roughly speaking, to the height of land between the St. Lawrence and Hudson Bay waters, has been the centre of the most extensive exploitation, and still occupies that position as far as Eastern Canada is concerned. The forest types which still exist in this region vary considerably, owing to soil and other conditions, but, generally speaking, white pine occupies the better situations on the lighter soils and reaches its highest development in this belt. With it is frequently associated the red or Norway pine. On heavier soils, spruce, hemlock and the tolerant hardwoods also form an important part of the stand. Cedar, tamarack and black spruce form typical stands in poorly drained situations. Hardwood ridges, carrying chiefly maple and yellow birch, occur in the southern part of this belt. These, with hemlock, extend north to a line running approximately from the northeast corner of lake Superior to the mouth of the Saguenay river. The extensive lumbering operations of the past century, together with repeated forest fires, have greatly modified these original types. The exclusive cutting of white and red pine, practised until recently, has resulted in the displacement of these species by spruce, balsam fir, jack pine and the hardwoods, the spruce-balsam fir pulpwood areas being the most valuable type remaining. Jack pine has come in extensively on burned-over areas on lighter soils and in some cases has taken permanent possession of such sites. On account of its value for railway ties and pulpwood and the ease with which it can be grown it is not at all an undesirable species to perpetuate. Aspen and paper birch are also rapidly becoming established as temporary types. Along its northern border, this mixed hardwood and softwood type merges into the northern forest belt already described, with the disappearance of first the hemlock and the tolerant hardwoods and then the white and red pines.

The Acadian Belt covers the Maritime Provinces and the south shore of the St. Lawrence in Quebec. The forest is similar to that of the New England States, being characterized by red spruce. With this are found varying proportions of white spruce and balsam fir. In the mixed softwood and hardwood type, which also occurs in this belt, white pine and hemlock occur, with yellow birch, maple and beech representing the commercial hardwoods. Cedar is fairly abundant in the western portion of this region. Burned-over areas in the Acadian Belt are chiefly occupied by aspen and white birch as temporary species.

Section 3.—Important Tree Species.

In Canada there are approximately 125 species or distinct varieties of trees. Only 33 of these are conifers commonly known as "softwoods", but they comprise over 80 p.c. of the standing timber and 70 p.c. of the wood utilized for all purposes. While the number of deciduous-leaved or "hardwood" species is large, only about a dozen are of a commercial importance comparable with twice the number of conifers. The principal use for the hardwoods is for fuel, though increasing amounts are being manufactured into lumber, railway ties and veneers. A detailed description of the more important species of Canadian forest trees was given on pp. 282-285 of the 1924 Year Book.

Section 4.—Forest Resources.

Areas.—The total land area of Canada, revised according to the Labrador Boundary Award of 1927 and the latest surveys, is estimated at 3,466,793 square miles, of which 564,000 square miles is considered as being suitable for agricultural or pastoral purposes. According to the Census of 1931 about 255,094 square miles of this agricultural land was occupied and about 133,220 square miles was improved.

The total area covered by existing forests has been estimated at 1,153,000 square miles, including 26,652 square miles of occupied agricultural land still forested. Most of this will no doubt be left under forest cover in the form of farmers' woodlots. There is also a considerable area of forest land which is of agricultural value and will eventually be cleared but it is estimated that 1,100,000 square miles is essentially forest land which can best be utilised for forest production (See Table 8, p. 41).

The accessible and productive forest area is estimated to be 791,670 square miles of which 378,945 square miles carries timber of merchantable size and on 412,725 square miles there is young growth which if protected from fire will eventually produce merchantable timber. The remaining area of 361,330 square miles carries forests of value either because of their influence on water control, climatic conditions, game conservation, or by reason of their attraction to tourists and their value as a source of wood for local use. On account of their geographical location or because of unfavourable growth conditions these forests at present are considered as non-productive from a commercial viewpoint.

As a result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever increasing demand for these products, due to the development of industry, the discovery of new uses for wood, and the improvements in the methods, equipment and machinery used in logging and manufacturing forest products, most of this inaccessible timber will eventually become commercially exploitable. It is estimated that of the accessible forest area 481,790 square miles is producing softwood or coniferous timber, 213,590 square miles, mixed softwoods and hardwoods and 96,290 square miles, hardwood or broad-leaved species.

In Canada as a whole about 8·4 p.c. of the total forest area has been permanently dedicated to forest production. Previous to the transfer of the natural resources to the western provinces in 1930, some 33,023 square miles of this reserved area comprised national forests but these have now in large part become provincial forests. The distribution of provincial forests, provincial parks and national parks among the various provinces is shown in the following statement.

FOREST RESERVES AND PARKS IN CANADA, 1934.

Province.	Provincial Forest Reserves.	Provincial Parks.	National Parks.
	sq. miles.	sq. miles.	sq. miles.
Nova Scotia	–	–	0·05
New Brunswick	–	–	0·10
Quebec	28,960	4,759	–
Ontario	19,607	4,888	11·69
Manitoba	3,811	–	1,148·04
Saskatchewan	9,835	545	1,869·00
Alberta	19,433	2	7,316·00[1]
British Columbia	15,981	2,727	1,715·00
Totals	97,627	12,921	12,059·88

[1] Not including the Wood Buffalo Park, partly in Alberta and partly in the Northwest Territories, and the Tar Sands Reserve. These areas are not administered as National Parks.

Of the total forest area, less than 10 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. The Crown still holds title to 13·2 p.c. of the area but has alienated the right to cut timber thereon under lease or licence. So far 77·2 p.c. has not been alienated in any way. It may be said that 90·4 p.c. of Canada's forest area is still owned by the Crown in the right either of the Dominion or the provinces and, subject only to certain temporary privileges granted to limit-holders, may at any time be placed under forest management and dedicated to forest production.

Volume of Standing Timber.—In 1932 the total stand of timber in Canada was estimated to be approximately 266,844 million cubic feet, of which 216,236 million cubic feet was of coniferous species and 50,608 million cubic feet of broad-leaved species.

During the years 1926-30, which were typical of pre-depression conditions, the average annual depletion due to use was approximately 2,000 million cubic feet of conifers and 970 million cubic feet of hardwoods. The average annual loss from fire was estimated at 185 million cubic feet of conifers and 45 million cubic feet of hardwoods. Though no widespread epidemics of insects or fungous diseases have occurred in recent years, local infestations which cause considerable loss develop practically every year. In Nova Scotia, in 1931, the balsam suffered severely from "gout" induced, it is believed, by minute sucking insects of the genus *Dreyfusia*, previously undescribed. In the Gaspé peninsula the spruce saw-fly became a serious menace. In the absence as yet of any basic data on which to estimate the annual depletion from these causes, it may be taken as 700 million cubic feet. The total annual depletion during the five-year period was therefore estimated to have been about 3,900 million cubic feet. To what extent this loss has been replaced by growth increment is not known but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty is the division of the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends not only on the location but on the density of the stand, the demands of the market for certain species or qualities of product, and the regulations as to cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory definite data are being secured regarding the depletion due to use, fire, insect damage, etc., and the increment accruing. Five years was set as an objective for the completion of an inventory of at least the more accessible parts of the area but, though considerable progress has been made, the disturbed financial conditions have retarded the work in practically every province. The Forest Service of the Department of the Interior acts as a clearing house for the national inventory, and in addition to collecting and compiling the data furnished by the provincial authorities has conducted the inventorial work in the Prairie Provinces and New Brunswick.

The Dominion Service is also carrying on extensive surveys to determine the increment taking place in the forests and conducting more intensive silvicultural research at forest experiment stations located in Alberta, Manitoba, Ontario, Quebec and New Brunswick.

Under present conditions it is doubtful whether more than 135,000 million cubic feet of conifers and 30,000 million cubic feet of hardwoods can be considered as accessible.

1.—Estimate of Total Accessible Stand of Timber in Canada, by Regions and Classes, with Estimate of Grand Total Stand, 1933.

Section 5.—Forest Administration.

Subsection 1.—Administration of Dominion and Provincial Timber Lands.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values or, as has happened, reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 76 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces is as follows: Quebec, 7 p.c.; Ontario, 3·3 p.c.; Manitoba, 11·3 p.c.; Saskatchewan, 10·4 p.c.; Alberta, 15·7 p.c. and British Columbia, 13 p.c.

Until 1930 the Dominion Government administered the Crown lands, including timber lands, in the provinces of Manitoba, Saskatchewan and Alberta, in the Railway Belt and Peace River Block of British Columbia, and in Yukon and the North-

west Territories, but the forests as well as the other natural resources in the western provinces have now been transferred to provincial control. In all cases timber lands are now administered by the provinces in which they lie. As new regions are explored their lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

Timber Lands under Dominion Control.—The National Parks of Canada Branch of the Department of the Interior administers the Dominion parks, now embracing about 29,363 square miles. These are primarily national playgrounds and game preserves, the timber being practically withdrawn from commercial use. The Dominion Lands Administration of the Department of the Interior administers and protects forest land lying north of the provincial areas. The Department of Indian Affairs administers, in trust for the Indians, all timbered areas within their reservations. The Board of Railway Commissioners has charge of fire protection along practically all the railway lines in Canada.

Forest Administration in the Prairie Provinces.—Upon the transfer of the natural resources in 1930, each province took steps toward the creation of an adequate forest service with a Provincial Forester in charge. In Manitoba the service is under the Department of Mines and Natural Resources and in its forest regulations, framed under the Manitoba Forest Act, the former Dominion Forest Reserves and Crown Timber Regulations are very largely incorporated. In Saskatchewan and Alberta a closely similar policy is being followed. In every case the central object of policy is to safeguard the regeneration of valuable species in the natural forest types. The national forests in these provinces have practically all been retained as provincial forests and some additional reserves have been established, making a total area of 32,458 square miles. Approximately 27,335 square miles of forest lands in the Prairie Provinces are privately owned.

British Columbia.—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber lands since 1912. All unalienated lands in the province which are found to be better suited to forest than to agricultural production are dedicated to forest production, and all timber lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the last few years 15,964 square miles have been set aside permanently for forest purposes. The present practice is to sell cutting rights for a stated period by public competition but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 18,150 square miles of timber land are privately owned.

Ontario.—Forest administration is carried out in Ontario under the Department of Lands and Forests, which is subdivided into two divisions each under a Deputy Minister. The Lands and Forests Division controls timber sales and the Forestry Division has charge of reforestation, protection, air service, forest surveys and investigations. The Forestry Board, consisting of representatives of forest industries, the University of Toronto Faculty of Forestry and the Deputy Minister of Forestry, acts in an advisory capacity.

In recent years the sale of saw timber has been by tender after examination, with conditions covering the removal within a specified period, disposal of debris, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. Manufacture in Canada was made a condition in the disposal of all softwood saw timber in 1897, of all pulpwood in 1900 and of all hardwood in 1924. In some individual pulpwood agreements the licensee must undertake not only to erect a pulp-mill but also a paper-mill within the province, the type of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright. Provincial forest reserves cover 19,607 square miles.

Quebec.—The Forest Service of the Department of Lands and Forests administers the timber lands in Quebec. Its powers include classification of land, disposal of timber and regulation of cutting operations. Since 1924 forest protection has been under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the Government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 34,173 square miles of forest land. An area of 28,960 square miles has been reserved for forestry purposes.

New Brunswick.—The Forest Service, under the Department of Lands and Mines, and a special Forestry Advisory Commission are the forest authority in New Brunswick. The Forestry Advisory Commission, consisting of the Minister of Lands and Mines, the Deputy Minister, the Chief Forester, a lumberman representing the licensees of Crown lands, and one representing the private timberland owners, is appointed to advise on matters of policy. At present timber lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns and individuals, who now own in fee simple about 10,675 square miles of forest land.

Nova Scotia.—In Nova Scotia the greater part of the forest land, amounting to 12,000 square miles, has passed into private ownership, but the system of disposal of timber by licences to cut is now being followed. What remains vested in the Crown is administered by the Chief Forester under the Minister of Lands and Forests. Under the Minister, the Chief Forester has charge of forest protection, surveying and scaling throughout the province.

Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. Except for the forests of the National Parks and the Northwest Territories and Yukon, which remain under Dominion control, the administration of forest lands is now the function of the individual provinces. Up to the end of the fire season of 1930, the Forest Service of the Department of the Interior was responsible for fire protection in the prairie provinces of Manitoba, Saskatchewan, and Alberta, and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for closed seasons during dangerous periods. An interesting development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development of late years in forest fire protection has been the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys. As a general rule aircraft are used in the more remote districts, while lookout towers, connected by telephone lines or equipped with wireless, are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback and foot patrol for detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires and the maintenance of systems of communication and transportation, and of fire lanes and fire guards in the forest.

The most important improvement in forest fire-fighting equipment has been the portable gasolene pump. These pumps, which each weigh from 45 to a little over 100 pounds, can be carried to a fire by canoe, motor boat, automobile, aircraft, pack saddle or back pack. They can deliver efficient water pressure as far as seven thousand feet from a water supply and, when used in relays, at a much greater distance. Smaller hand pumps are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of closed seasons for brush burning, and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its attractive magazine, which has a circulation of over 16,000, railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools, by specially appointed junior forest wardens and other means to educate the younger generation as to the value of the forests, the devastation caused by fire and the means of preventing such destruction.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another interesting development in forest protection has been the establishment of special meteorological stations for the study of the effects of weather conditions on the fire hazard, and the broadcasting of special forecasts of hazardous fire weather.

Subsection 3.—Scientific Forestry.

Up to the present, the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. About 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, while several commercial reforestation projects have been carried on by paper companies and by the Ontario Government on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion services and some of the provincial services.

About 250 technical foresters find employment either under the Dominion and provincial forest services or with paper and lumber companies. In addition to administrative work, these men carry on forest surveys either for the estimation of timber stands and making of maps, or to determine natural growth and reproduction conditions and factors. They also direct any planting or nursery work and direct the regulation of commercial logging operations along forestry lines.

The Research Division of the Dominion Forest Service has established permanent forest experiment stations at Petawawa, Ontario, and at Lake Edward, near Grand'Mère, in Quebec, and carries on similar experimental work at other points throughout Canada. A considerable amount of this work is done in co-operation with provincial forest services and with pulp and lumber companies.

The Forest Service of the Department of the Interior is now conducting a National Forest Inventory in co-operation with the various Provincial Governments (see p. 318). An important feature is that the Forest Service is carrying on special rate-of-growth surveys in each province to determine the nature and extent of the natural reproduction and the annual increment now being secured under varying conditions of site and type, following cutting or forest fires. The valuable silvical data thus obtained will provide a sound basis for future forest policies.

87473—21½

Another important phase of forest research is found in the work of the Dominion Forest Products Laboratories in determining the best methods of forest utilization, that is, the converting of standing timber into saleable commodities with a minimum of waste. These laboratories, established by the Dominion Forest Service at Ottawa and in connection with the University of British Columbia at Vancouver, carry on investigatory work in forest products, covering the strength, durability and other mechanical, physical and chemical qualities of Canadian woods, methods of seasoning, preservation from decay, and chemical utilization in wood distillation and other industries. A special pulp and paper division of the laboratories is located in Montreal, the recognized business centre of the industry, in the Cellulose Institute of the Canadian Pulp and Paper Association. The division is in close co-operation in this connection with the Association and with McGill University. Much credit is due to the forestry departments of some of the pulp companies for pioneering work in forest research.

Education in forestry and allied subjects and opportunities for research are offered by four Canadian universities and by other agencies. The University of Toronto, the University of New Brunswick and the University of British Columbia, provide four-year courses leading to a professional degree. The School of Forestry and Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years duration leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry and a school for forest rangers has been established at Berthierville by the Quebec Forest Service.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Department of Agriculture maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and wind-breaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of over 125,000,000 trees has been distributed.

The province of Ontario provides material under similar conditions and distributes to woodlot owners at least 7,000,000 trees annually from its five nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant, free of charge, any area purchased by the municipality for this purpose. The Government also assists counties that purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present, scattered throughout the province, 50 communal forests (owned by municipalities) and eight of the larger county forests. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry and as a location for the forest ranger school. It provides trees for sale and distribution in the province, comprising seedlings and transplants

for forest planting and larger trees for ornamental purposes. The capacity of the nursery is about 10,000,000 trees. Provision is made by legislation for the creation of communal forests and there are now 76 of these, covering 594,059 acres.

Section 6.—Forest Utilization.*

Historical.—The forest has always played a large part in the life of the pioneer in Eastern Canada, providing him with building material and fuel but opposing his agricultural efforts. The material removed in clearing the first fields was usually more than sufficient for his needs, and in many cases what would now be considered valuable timber was burned by the early settler. Local trade in lumber began in New France shortly after 1650. The first attempts at forest conservation took the form of setting aside areas of timber for the use of the navy, and the first exports were of shipbuilding material and spars. Sawmills were established along the St. Lawrence before the close of the seventeenth century. While there was no recorded transatlantic trade in forest products other than naval supplies, shipments of lumber and staves were made to the French West Indies during the French *régime*. Shipbuilding became an important local industry and gave rise to considerable forest exploitation.

Transatlantic trade began to develop after the Conquest, stimulated by bounties and tariff privileges granted with the object of reducing England's dependence on Baltic supplies, especially in connection with naval material. This trade, however, did not develop satisfactorily until the beginning of the nineteenth century, when Napoleon succeeded in interfering seriously with British imports of wood from the Baltic. The export of timber from Canada increased enormously, and the square-timber trade in white pine and oak spread from the St. Lawrence and Richelieu valleys to lake Champlain and Upper Canada, especially the Ottawa valley. This trade reached its height in the '60's and has steadily declined since that time.

Sawmilling on a large scale followed the square-timber trade and the establishment of small custom mills followed in the wake of the settler. The building of wooden ships in the St. Lawrence valley and the Maritime Provinces developed hand in hand with the lumber industry, providing a local demand for timber and a means of exporting it overseas. The British preferences were reduced and finally abolished about 1860.

The export trade in sawn lumber to the United States developed from 1820 to 1830 and gradually replaced the more wasteful overseas square-timber trade, but it was not until after Confederation that the export of sawn lumber by sea exceeded that of square timber.

Encouraged by the free entry of raw materials into the United States, an important trade developed, especially in Ontario, in the exportation of sawlogs to be sawn into lumber in United States mills. The Provincial Government prohibited the exportation of this material, when cut on Crown lands, about 1900 and effectively checked this economic loss. Similar legislation has since been passed by the Dominion and the other Provincial Governments and has been extended to pulpwood and other raw or unmanufactured forest products.

The lumber industry which began in Quebec and New Brunswick and extended into Upper Canada has since moved gradually through southern Ontario, along the upper Ottawa and its tributaries, around Georgian bay into northern Ontario and through the Lake of the Woods and Rainy River districts. It is still an important

*An article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., appears at pp. 318-323 of the 1925 edition of the Canada Year Book.

industry in these regions. Lumbering to the north of the prairies, where the timber was never particularly large nor abundant, has progressed with the settlement of the district but the production does not usually exceed the local demand. In 1908 British Columbia provided less than a fifth of Canada's lumber production but in 1932 this proportion had increased to more than fifty per cent, showing the westward movement of the centre of production. British Columbia has added several new tree species to the lumber market and at present possesses the heaviest stands and the largest individual trees in Canada.

Remarkable developments in the manufacture of pulp and paper early in the twentieth century led to a remarkable increase of forest exploitation in Eastern Canada, giving rise to an industry which surpassed the manufacture of lumber and is to-day the most important manufacturing industry in Canada and the source of the greatest single item in our exports next to wheat.

Subsection 1.—Woods Operations.

Differences in forest conditions throughout Canada give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is therefore almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways but in some cases by motor trucks. These operations are more or less independent of frost, snow or freshet and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, sub-contractors and jobbers. In the better-settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties and other forest products have a market value, but sawlogs, being as a rule the property of the mill-owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit-holders, who cut and sell logs on the market. In many cases mill operators are not limit-holders but buy their entire supplies of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, which all go to swell the total.

Table 2 gives the total value of the products of woods operations in Canada for the years 1928 to 1932 inclusive. The exports and imports of forest products in the fiscal years ended Mar. 31, 1931-34 are shown in Tables 12 and 13 of the chapter on External Trade.

[1]The value of woods operations for 1933, made available at the time of going to press, is $93,773,143.

It has been estimated that operations in the woods in Canada in 1932 involved the investment of $95,000,000 in logging equipment, gave employment for a part of the year equivalent to 60,000 man-years, and distributed over $43,200,000 in wages and salaries. In estimating the annual drain on our forest resources, certain converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1932, due to consumption for use, amounted to 1,882,228,308 cubic feet. To this total must be added the volume of material destroyed by fire, insects and fungi, which would bring the average annual depletion for the period 1928-32 to approximately 3,815,000,000 cubic feet of standing timber. Table 3 gives the reported or estimated quantities of wood cut, by chief products, together with the respective converting factor, the equivalent in standing timber and the estimated value in each case for 1931 and 1932. Table 4 shows the extent of the drain on our forest resources in 1931 and 1932, by provinces.

Subsection 2.—The Pulp and Paper Industry.

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by United States citizens who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greensville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed to have been the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper-making was extensively developed and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritton in the Niagara Peninsula; by the beginning of the century the output of the industry had exceeded $8,000,000. In 1907 the Brompton Pulp and Paper

Co. built, at East Angus in Quebec, the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over $232,000,000 in 1920. This was followed by a drop in 1921, following which there was a steady recovery, resulting in a total for 1929 of $243,970,761 exceeding the abnormally high total value reported in 1920. This was followed by annual decreases down to 1933.

The rapid development of this industry up to 1929 was due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species and an increasing demand for newsprint paper in the United States. Summary statistics for the combined pulp and paper industry are given on p. 337.

There are to-day three classes of mills in the industry. These in 1933 numbered 28 mills making pulp only, 42 combined pulp and paper-mills, and 25 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must, in every province, be manufactured into pulp in Canadian pulp-mills except under special permit. The pulpwood which is exported to the United States is therefore largely cut from private lands. Table 5 shows the annual production of this commodity from 1920 to 1933, together with the quantities used by Canadian pulp-mills and the quantities exported. For figures for the years 1908 to 1919, inclusive, see the 1931 Year Book, p. 288.

[1]Exports of pulpwood in the calendar year 1934 were 923,219 cords. [2]Revised since the publication of the 1933 Year Book.

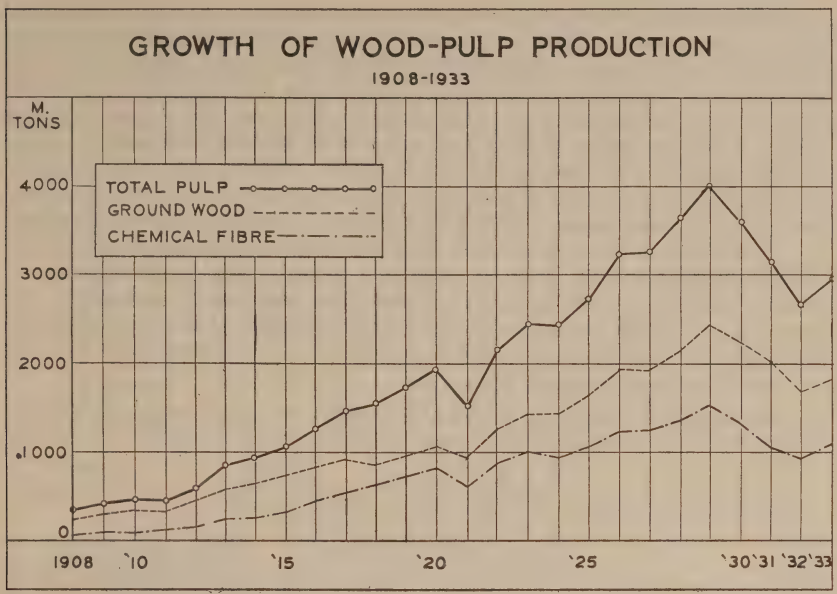
In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form but by 1916 the proportion had declined to two-fifths. In 1933 the proportion exported was less than one-fifth.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

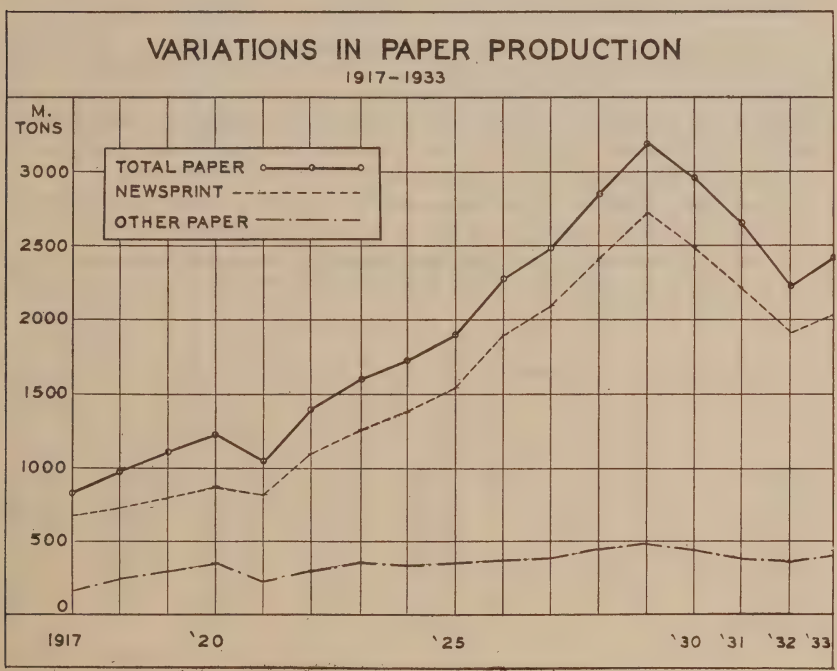
The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented with fibres from the stems, leaves and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4′ by 4′ by 8′ of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are, in Canada, four methods of preparing wood-pulp, one of which is mechanical and three chemical. Detailed descriptions of these processes were given in the 1931 Year Book, pp. 290-291.



Pulp Production.—Table 6 shows the total production of pulp in Canada from 1920 to 1933 inclusive, together with the production of groundwood pulp and the production of fibre by the chemical processes described. Comparable statistics for 1908 to 1919 inclusive appear at p. 293 of the 1931 Year Book.



6.—Pulp Production, Mechanical and Chemical, calendar years 1920-33.

[1]The totals for 1920-32 include some unspecified pulp. [2]Revised since the publication of the 1933 Year Book.

The growth of this industry was steady up to 1920, when 1,960,102 tons of pulp were produced. There was a drop in production in 1921, but production in 1922 more than overtook the previous years drop. Following this, with the exception of 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932. The 1933 figure of 2,979,562 tons marks an increase of almost 12 p.c. over 1932.

During 1933 there were 28 mills manufacturing pulp only and 42 combined pulp and paper mills. These 70 establishments turned out 2,979,562 tons of pulp, valued at $64,114,074, as compared with 2,663,248 tons of pulp, valued at $64,412,453 in 1932. Of the 1933 total for pulp, 2,225,540 tons, valued at $37,729,011, were made in the combined pulp and paper-mills for their own use in manufacturing paper. Of the remainder, 124,239 tons, valued at $4,235,902, were made for sale in Canada, while 629,783 tons, valued at $22,149,161, were made for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 61 p.c. of the production in 1933 was groundwood pulp and over 18 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, sulphate and soda fibre made up the remainder, with screenings, for which a considerable market has developed in recent years in connection with the manufacture of rigid insulating boards. Table 7 shows the production of pulp by provinces in the last six years.

[1]Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia.

Pulp Exportation.—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1933. Figures for 1913, the year immediately preceding the War, and for 1932 are shown for comparison. Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1931-34, will be found in Table **12** of the chapter on External Trade. In the calendar year 1934 the exports of wood-pulp from Canada were 605,641 tons.

The total exports of the ten principal pulp-exporting countries of the world in 1933 were 6,052,338 short tons, of which Canada contributed about 10 p.c.

Paper Production.—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are available only for the years 1917 to 1933 inclusive. These are given in Table 9.

During 1933 there were 42 combined pulp and paper-mills and 25 mills making paper only. These 67 establishments produced 2,419,420 tons of paper, together with certain miscellaneous pulp products, with a total value of $97,030,429, as compared to 2,290,767 tons, valued at $114,115,570 in 1932. Newsprint paper forms over 80 p.c. of the annual paper production in Canada. In 1933, the production of newsprint paper was 2,021,965 tons, valued at $66,959,501, reaffirming Canada in the position of largest producer of newsprint in the world. The preliminary estimate for 1934 is 2,599,292 tons.

[1] Revised since the publication of the 1933 Year Book.

Newsprint made up about 84 p.c. of the total paper production in 1933, with about 10 p.c. of paper boards, 3 p.c. of wrapping paper, 2 p.c. of book and writing paper and about 1 p.c. of other miscellaneous papers.

10.—Production of Paper in Canada, by Provinces, 1933.

Province.	Quantity.	Value.
	tons.	$
Quebec	1,138,032	45,583,472
Ontario	790,484	34,183,270
British Columbia	262,301	8,885,395
Nova Scotia and New Brunswick	228,603	8,378,292
Totals	**2,419,420**	**97,030,429**

Quebec produced 47 p.c. of the total quantity, Ontario 33 p.c., British Columbia 11 p.c. and Nova Scotia and New Brunswick the remainder.

World Production of Newsprint.—The world production of newsprint in 1933 has been estimated at 6,421,000 short tons, of which North America supplied over 50 p.c. and Canada alone almost a third. The estimated production in the leading 23 countries, compared with 1932, and the five-year averages 1929-33, were as follows:—

11.—Estimated Quantities of Newsprint Produced in Leading Countries, 1932 and 1933, and the Five-Year Averages, 1929-33.

NOTE.—Countries by order of importance according to the 1933 production.

Exportation of Newsprint Paper.—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at $2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 short tons valued at $9,980,378. For the fiscal year ended Mar. 31, 1934, our exports of newsprint amounted to 2,024,057 tons valued at $73,238,482 and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1931-34, see Table **12** of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and, since that date, her exports have increased more than seven-fold in quantity. The following table shows the exportation of newsprint from the 13 principal exporting countries in 1913, 1931, 1932 and 1933. Canada contributed to the total over 61 p.c. or more than all the other 12 countries combined in 1933. Canada's exports of newsprint paper for the calendar year 1934 were 2,399,624 tons.

Statistics of the Combined Pulp and Paper Industries.—While the manufacture of pulp and that of paper are properly two industries, the existence of combined pulp and paper-mills makes it impossible to separate many of their statistics. Considering the manufacturing part of the industry as a whole, there were altogether 95 mills in operation in 1933 and 98 in 1932. The capital invested in 1933 amounted to $559,265,544, the employees numbered 24,037 and their salaries and wages amounted to $26,591,049. If we disregard pulp made "for own use" in combined pulp and paper-mills, the total value of the raw materials used in the industry as a whole amounted to $47,632,521, and the gross value of production to $123,415,492. The difference between these two, or the net value of production, represents the value added by manufacture and amounted in 1933 to $75,782,971. The pulp and paper industry, now the leading single manufacturing industry in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It has been the leading industry in gross value of production since 1925, when it replaced the flour mills, and also first in net value of production since 1920, when it outstripped the sawmills in this respect. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid nor primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the $4,696,459 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward a favourable trade balance for Canada in 1933 amounted to $94,809,504, representing the difference between exports and imports of pulpwood, pulp, paper and paper products.

The United States' market absorbs annually all of Canada's pulpwood exports, 80 p.c. of her pulp and 81 p.c. of her paper shipments. Of the pulp, 4 p.c. goes to Empire and 96 p.c. to foreign countries. Of the paper 13 p.c. goes to Empire and 87 p.c. to foreign countries. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

Subsection 3.—The Lumber Industry.

The manufacture of lumber, lath, shingles and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the Department of the Interior from 1908 to 1916, since when the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet board measure, the highest cut recorded since 1912. Owing to the subsequent depression the production of lumber in 1921 decreased by over a third and the average value by over $10 a thousand feet. This was followed, with one exception, by annual increases up to 1929 and then by annual decreases down to 1932. There was an increase in 1933. British Columbia now produces over half the total. Table **13** gives the production of lumber, lath and shingles in each year from 1920 to 1933; comparable figures for 1908 to 1919 inclusive are given at p. 300 of the 1931 Year Book.

[1]Revised since the publication of the 1933 Year Book.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for cutting-up and barking or rossing of pulpwood reporting in 1933 was 3,517, as compared with 3,593 in 1932. The capital invested in these mills in 1933 was $74,304,090, employment amounted to 17,779 man-years and wages and salaries amounted to $10,040,165. The logs, bolts and other raw materials of the industry were valued at $22,870,710 and the gross value of production was $39,438,057. The net production, or the value added by manufacture, in 1933 was $16,567,347.

The production of sawn lumber increased in quantity from 1932 to 1933 by 5·3 p.c. Lath production decreased by 27·2 p.c., but shingle production increased by 7·6 p.c. Otherwise, increases were reported in the production of all but a few of the minor products. The total gross value of production increased from $38,506,647 in 1932 to $39,438,057 in 1933; for production by provinces for the two latest years see Table **14.**

British Columbia came first in total production, contributing 57·9 p.c. of the total cut in lumber and 82 p.c. of the shingles in 1933. Quebec followed in second place, Ontario was third and New Brunswick fourth. Douglas fir was the most important kind of lumber sawn, being produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with hemlock, white pine and balsam fir next in order of importance. Cedar is the most important shingle wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood in this industry, only 5 p.c. being deciduous-leaved trees or hardwoods.

Lumber Exportation.—The square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with the latter country has been from the first largely confined to planks, boards and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become invariable. The total quantity of sawn lumber and square timber exported from Canada changed little from 1900 to 1929, averaging about two billion ft. b.m. per annum, but decreased considerably in 1930, 1931 and 1932. The exports in 1932 amounted to 790,789 M ft. b.m., valued at $14,159,315, of which the United States took the greater part. Exports to Empire countries made up 42 p.c. of the total and those to foreign countries, 58 p.c. In 1934, however, exports to Empire countries had increased to 74 p.c. of the total. The exports of lumber and square timber increased in 1934 as compared with 1933, but the exports of shingles and lath decreased. (See Table **15.**)

Subsection 4.—Summary of Primary Forest Production.

For the purpose of comparing primary industries such as agriculture, fishing, forestry and mining, forestry production is here understood to consist of the total value of the products of woods operations, together with the value added by manufacture in sawmills and pulp-mills, but not in paper-mills. Forestry production under this system of classification, amounted to $133,401,946 in 1932 or about 13 p.c. of the total primary production for the Dominion, which was estimated at $1,051,543,238. Forest production, therefore, stood in third place in this respect, being exceeded by agriculture with $565,417,704 or 54 p.c. and mining, with $191,228,225 or 18 p.c.

Subsection 5.—Other Forest Industries.

Sawmills and pulp-mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors and other millwork and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

Subsection 6.—Manufactures of Wood and Paper.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in comparing manufacturing industries and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1933 the gross value of production for all classes of manufactured products amounted to $2,086,847,847, of which total the wood and paper group contributed $342,155,077 or over 16 p.c. It was only exceeded in this respect by the vegetable products with over 20 p.c. Of the ten groups of the industrial census the wood and paper group, which includes the manufacture of lumber, pulp and paper as well as the wood- and paper-using industries, was highest in number of establishments with 7,917, in net value of products, with $207,175,377 and in salary and wage distribution with $102,500,377.

In few industries did manufacture add, in 1933, a higher percentage to the raw material used than in the wood- and paper-using industries; in the manufacture of pulp and paper this percentage is 159 and in the lumber industry, 66. By the manufacture of lumber into planing-mill products its value is increased by 92 p.c.

For the wood and paper group as a whole the net value of production, or the value added by manufacture, in 1933 was $207,175,377, or 153 p.c. of the value of raw materials used. Further details are given in the Manufactures chapter of the present volume.

The forests of Canada contribute an important part to her export trade. During the fiscal year ended Mar. 31, 1934, exports of forest origin amounted to $143,142,398 and made up 25 p.c. of the total value of exports for the period, amounting to $579,343,145. Exports of forest origin were exceeded only by those of farm origin, which made up 35 p.c. of the total and were followed by products of mineral origin with 21 p.c. Forest products are also prominent among the individual items of exportation. Newsprint paper is second only to wheat on the list, with wood-pulp fourth and sawn lumber fifth. The gross contribution of the forest toward a favourable trade balance for Canada amounted to $143,710,162 during the same period, exceeding all other groups in this respect.

Subsection 7.—Forest Depletion and Increment.

Fire Losses.—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that 60 p.c. of the original forest has been burned, 13 p.c. has been cut for use and 27 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on our resources. At a low estimate fire destroys annually about 230,000,000 cubic feet of merchantable timber and the young growth on 550,000 acres.

Since the historic Miramichi fire, which burned along the valley of the Miramichi river in New Brunswick in 1825, there have been a number of disastrous fires. About the year 1845 vast areas, west of lake Superior, were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district; in Quebec, the country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires about this time.

During more recent times a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at $3,000,000. In 1916 fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908 a fire originating in the forest around Fernie, B.C., destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly depleting our forest resources. In 1923 there were unusually disastrous fires, chiefly in Eastern Canada. A total area of over 6,000,000 acres was burned over with a loss of approximately $46,000,000.

Speaking generally, there are annually two periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the herbaceous growth is dead and the ground covered with dry leaves.

Statistics compiled by the Dominion Forest Service from reports received from the various provincial and private forest protective organizations, show that during the ten-year period, from 1922 to 1931, 86·5 p.c. of all fires reported were due to human agencies and were therefore preventable. The remainder were attributed to lightning. Campers, settlers and railways are responsible for most of the fires whose origin is determined. Other causes, including lumbering operations, lightning and incendiarism, account for smaller proportions.

Losses through Insects and Fungi.—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam fir forests in Eastern Canada. In Quebec it was estimated that 100 million cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15 million cords. In this region the active stage of the infestation is now practically over, but the insect is causing damage in northern Ontario and Cape Breton island. Other insects, though not as destructive as this one, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm are causing considerable damage in eastern coniferous forests. During the last few years dusting by aeroplane has been developed on a practical basis by the Entomological Branch of the Department of Agriculture and promises to be effective in the control of defoliating insects. Perhaps the most effective means of controlling destructive forest insects is by the introduction of parasites. The Entomological Branch of the Dominion Department of Agriculture has developed this means of attack with marked success in the case of the larch saw fly and has recently secured from Europe some millions of parasitic insects which are being liberated in the forests infested with the spruce saw fly. The loss caused by the various forms of rot and other fungous diseases is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

Summary of Losses and Increment.—The annual consumption of standing timber for use amounts to about 2,970,000,000 cubic feet. During the last few years fire has destroyed annually about 230,000,000 cubic feet of merchantable timber and the young growth of various ages on 550,000 acres. The destruction occasioned by insects, fungi and windfall is not known, but is estimated at 700,-000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of upwards of 3,900,000,000 cubic feet per annum. With about 600,000 square miles of accessible timber in a growing condition, an average annual increment of 10 to 11 cubic feet per acre would be quite possible under forest management and would cover this depletion. In view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity. Extensive reproduction and rate of growth surveys being conducted by the Dominion Forest Service indicate that the increment is greater than previously estimated.

CHAPTER X.—THE FUR TRADE.*

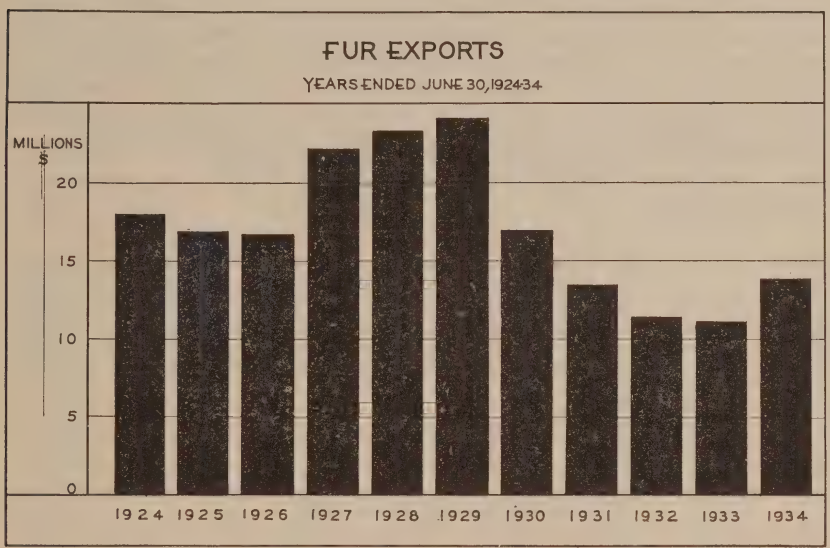
Historical Sketch.—The place which the fur trade held during the French *régime* in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing to the civilization which followed a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the following paragraphs.

From the earliest times the Basque and Breton fishermen from the "Banks" had traded for furs. As the French court demanded more and more furs, adventurers came for the fur trade exclusively. Pont-Gravé and Chauvin built Tadoussac in 1599 as a centre for this trade with the Indians of the Saguenay and, when trade routes were discovered farther inland, the founding of Quebec and Montreal followed. The French Government from the first granted monopolies of the fur trade, always on the condition that the company should bring to Canada a stated number of settlers. But settlement and the fur trade could never go together—settlement, by driving fur-bearing animals farther afield, made trade increasingly expensive, and the great profits of the fur trade, together with its freedom and romance, took the more adventurous from the rational pursuits of settlers. Trade spread west and south by the river routes, convoys bringing the furs yearly to Montreal and Quebec. The de Caen Company, in the seventeenth century, sent yearly to France from 15,000 to 20,000 pelts. "Beaver" was made the Canadian currency.

In the meantime, English navigators had been seeking a Northwest Passage to the Orient. By 1632 their efforts came to an end with little practical result. Hudson bay, however, had been accurately charted, so that when the first English fur-trading ships came some 30 years later, they sailed by charted routes to a safe harbour. The first expedition came at the instigation of Radisson and Groseilliers, two French *coureurs des bois* who had travelled in the rich fur country north of lake Superior. They had sought aid in France but, being repulsed, turned to England. The charter of the "Adventurers of England trading into Hudson's Bay" was obtained in 1670 by Prince Rupert, uncle of Charles II, who became first Governor of the company (whence the name Rupert's Land). During the struggle with the French, beginning about 1685, no dividends were paid but with the English victory the company resumed payments. Forts were built on Hudson bay and James bay at the mouths of rivers; the company, as monopolist, waited for the furs to be brought to its posts.

With the Seven Years' War, the fur trade from the south passed out of the hands of the French and, until 1771, the English were busy rediscovering the old French routes to the West. A period of open competition followed. The discoverer of a new fur district was soon followed by competitors who undersold him and were undersold by him until some or all were ruined and left for new fields. The Northwest Company, founded in 1783-4, was a result of such competition. No capital was deposited, but each party supplied a proportion of the articles needed for trade. The Northwest Company pursued a vigorous policy, founding posts to control all the best fur districts. The Hudson's Bay Company felt the keenness of the competition, and was forced to abandon its ancient policy of waiting for furs to be brought to the bay. By 1816 the rivals had absorbed or ruined eleven other partnerships and were themselves on the verge of ruin. Finally, in

*Revised by Miss F. A. Brown, Chief of the Fur Statistics Branch, Dominion Bureau of Statistics. This Branch publishes a detailed Annual Report on the Production of Raw Furs (Wild Life), obtainable from the Dominion Statistician.



1821, the two were joined under the name of the older company. The Northwest Company brought with it the control of the Pacific and Arctic watersheds, to be added to the lands draining into Hudson bay, and over the whole region the Hudson's Bay Company secured legal recognition of its monopoly of the fur trade. There followed 40 years of great prosperity. The company's rights of exclusive trading in Indian territory expired in 1859 and, ten years later, it surrendered its other privileges. In return, Canada granted £300,000 to the company, as well as lands about its trading posts, and one-twentieth of the land in the fertile belt between the North Saskatchewan river and the International Boundary. The Hudson's Bay Company thereupon became a trading company, with no extraordinary privileges.

The Modern Industry.—Great changes have taken place in the fur trade since the early days, but competition has increased and new territory is as eagerly sought as in the days prior to 1821. The railway has revolutionized conditions wherever its influence reaches. Vessels now ply the larger lakes and rivers and the aeroplane is frequently used for the transportation of furs from the more inaccessible districts. Increase in trapping and improved methods of capture, together with the advance of lumbering, mining and agricultural settlement, have driven fur-bearing animals farther and farther afield, and to conserve the fur resources of the country the provinces have found it necessary to enact laws to regulate the capture of fur-bearing animals and to provide for closed seasons during certain periods of each year. The fur trade has assisted in meeting the demand for furs by popularizing common and previously despised furs and by encouraging the use of the furs of domestic animals. Fur farming is playing an increasingly important part in the fur trade of Canada, the value of pelts of ranch-bred animals now representing about 30 p.c. of the total annual value of the raw fur production of the Dominion. The fox has proved the best suited for domestication, although other kinds of fur-bearers are being successfully raised in captivity—mink, raccoon, skunk, marten, fisher, and fitch. The successful breeding of the fox on fur farms came in the period of rising prices after 1890 and the introduction of woven wire fencing. About the middle of the last century Persian lamb, astrachan and broadtail, the product of the Karakul sheep, a native of Bokhara, Central Asia, came into general use. A few of these sheep were imported into Canada some years ago, but the industry as a source of supply for pelts has not shown progress in this country. Experiments in the breeding of rabbits for their fur have resulted in the production of several valuable kinds, chief among which are the Chinchilla rabbit, whose fur resembles that of the Bolivian Chinchilla, and the castorrex, named on account of the likeness of its fur to that of the beaver (*castor canadensis Kuhl*). The fitch, a native of Germany, was introduced into Canada in 1929, and fitch farming has since made rapid strides. In 1933 the number of fitch farms was 43.

The important markets for Canadian furs are London and New York. At the close of the Great War, Montreal took a position as an international fur market, holding the first Canadian fur auction sale in 1920 when 949,565 pelts, valued at $5,057,114, were sold. The most recent figures show that at the auction sales held in Montreal during 1933, there were 2,394,764 pelts disposed of, with a total value of $3,461,530, lower prices rather than the kind or quality of the pelts accounting for the decrease in total value. Sales are also held at Winnipeg and Edmonton. An important industry in Canada in connection with the fur trade is that of the dressing and dyeing of furs. In 1933 the number of fur skins treated in Canadian plants was 7,320,741 and the amount received for the work, $1,449,232. The plants in operation numbered 13.

Exports.—Though the bison is gone forever and the beaver and the marten are slowly following, the fur trade of Canada is in no immediate danger of extinction. A century ago the value of the export trade in furs exceeded that of any other product. This has been greatly changed, yet the total output has not declined and Canada may be described as one of the great fur preserves of the world. In 1667 exports of furs to France and the West Indies were valued at 550,000 francs. In 1850, the first year for which trade tables of the Province of Canada are available, the value of raw furs exported was £19,395 ($93,872); for the twelve months ended June 30, 1920, the value was $20,417,329; for 1925, $17,131,172; for 1930, $17,187,399 and for 1932, $11,495,086. Raw furs to the value of $11,180,052 were exported during the twelve months ended June 30, 1933, the British market taking $7,122,874 worth and the United States most of the rest. The area which will continue to furnish the historic peltries when settlement has planted its furthest outpost will still have to be reckoned by the hundreds of thousands of square miles. It is the function of the fur trade to turn this vast domain to perpetual economic use.

For a review of the fur-farming industry of Canada, see Chapter VIII, pp. 275 to 278.

Conservation.—The conservation of the wild life of Canada has been made a special object of government policy through the organization, in 1916, of the Advisory Board on Wild Life Protection, to co-ordinate the efforts of various departments and branches of the Dominion Government in matters relating to the conservation of the wild-life resources of Canada. The Northwest Game Act and the Migratory Birds Convention Act are the most important subjects to which the attention of the Board is specially directed and upon which it makes recommendations. In addition, the Board investigates and studies all problems relating to the protection and better utilization of all fur-bearing animals, "big game" mammals and to bird life, whether game birds, insectivorous birds or others. The Board

serves entirely without remuneration and during the whole period of its existence has incurred no expenditure.

In all provinces and territories of the Dominion, regulations governing the taking of fur-bearing animals are in force, and most kinds are protected during certain seasons of the year. In cases where special protection is necessary to avoid extermination of the species, the killing of the animals is prohibited over a period of years. Licences are required for trapping and trading, and direct revenue is derived by the provinces and territories from raw furs. The activities of the Dominion as a whole, with respect to wild life, are co-ordinated through biennial conferences of provincial and Dominion game protection officials. These conferences are called by the Department of the Interior and have assisted in evolving efficient plans for the preservation of Canada's wild-life resources.

Fur Production Statistics.—Statistics of the number and value of raw furs and skins taken were collected at the Decennial Census of 1881 and thereafter till 1911, the figures showing a value of $987,555 taken in 1880, $768,983 in 1890, $899,645 in 1900 and $1,927,550 in 1910. In 1920 the Dominion Bureau of Statistics commenced the annual collection of returns from fur traders, but arrangements were subsequently made with the provinces whereby the provincial game departments undertook to supply annually to the Bureau statements of the number and value of pelts taken in the respective provinces, the information being based on royalties, export taxes, etc. The figures of pelts taken and their values are given for the available years in Table **1.** The high value shown for 1920 is due to the inflated prices of that time.

1.—Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1920-33.

Year ended June 30.	Pelts.	Value of Pelts.	Year ended June 30.	Pelts.	Value of Pelts.
	No.	$		No.	$
1920	3,600,004	21,387,005[1]	1927	4,289,233	18,864,126
1921	2,936,407	10,151,594	1928	3,601,153	18,758,177
1922	4,366,790	17,438,867	1929	5,150,328	18,745,473
1923	4,963,996	16,761,567	1930	3,798,444	12,158,376
1924	4,207,593	15,643,817	1931	4,060,356	11,803,217
1925	3,820,326	15,441,564	1932	4,449,289	10,189,481
1926	3,686,148	15,072,244	1933	4,503,558	10,350,154

[1] Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

Details by provinces of the numbers of pelts taken in the two latest years are given in Table **2.**

2.—Numbers and Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1932 and 1933.

Province or Territory.	Numbers of Pelts.		Values of Pelts.	
	1931-32.	1932-33.	1931-32.	1932-33.
			$	$
Prince Edward Island	20,696	17,852	693,314	466,244
Nova Scotia	62,546	40,492	403,882	477,742
New Brunswick	74,779	69,763	549,329	593,748
Quebec	410,900	312,077	2,334,262	1,558,458
Ontario	952,885	910,384	1,857,452	2,167,407
Manitoba	577,607	555,424	689,396	856,289
Saskatchewan	593,486	879,552	1,043,739	1,201,038
Alberta	1,121,749	1,215,052	877,343	1,074,917
British Columbia	201,522	181,361	576,102	668,030
Northwest Territories	375,440	269,319	1,032,394	1,095,226
Yukon	57,679	52,282	132,268	146,055
Totals	**4,449,289**	**4,503,558**	**10,189,481**	**10,305,154**

Among the provinces, Ontario occupies first place in value of raw fur production, its output in 1932-33 being valued at $2,167,407. Quebec is second with $1,558,458, and Saskatchewan third with $1,201,038. The relation of the value of raw fur production in each province to the total for Canada in 1932-33 is shown by the following percentages: Ontario, 21·0; Quebec, 15·1; Saskatchewan, 11·7; Northwest Territories, 10·6; Alberta, 10·4; Manitoba, 8·3; British Columbia, 6·5; New Brunswick, 5·8; Nova Scotia, 4·7; Prince Edward Island, 4·5; and Yukon 1·4.

In order of value, silver fox is far ahead of any one of the other kinds, with a total in the season 1932-33 of $3,135,885. Next in importance is the muskrat, with a total value of $1,581,606, and following closely is mink, with $1,438,375. None of the other kinds come to the million dollar mark. Beaver occupied in the season under review only fourth place, the value of output amounting to $698,660. Otter, mentioned prominently along with beaver in the records of the early trade, had in the season 1932-33 a take of only 8,885 skins, valued at $138,348. The value of the different kinds of fox, combined, for the season 1932-33 was $4,891,563, or 47 p.c. of the entire output of Canadian furs in the season. Practically all of the silver fox pelts are from fur farms, and large proportions of the blue, patch or cross, and red fox pelts are likewise from the farms. White fox, on the other hand, is a product of the wilds, most of the pelts being taken in the Northwest Territories, and the northern parts of Quebec and Manitoba.

The following table gives details of raw fur production by kinds for 1932 and 1933.

3.—Kinds, Numbers, Total Values and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1932 and 1933.

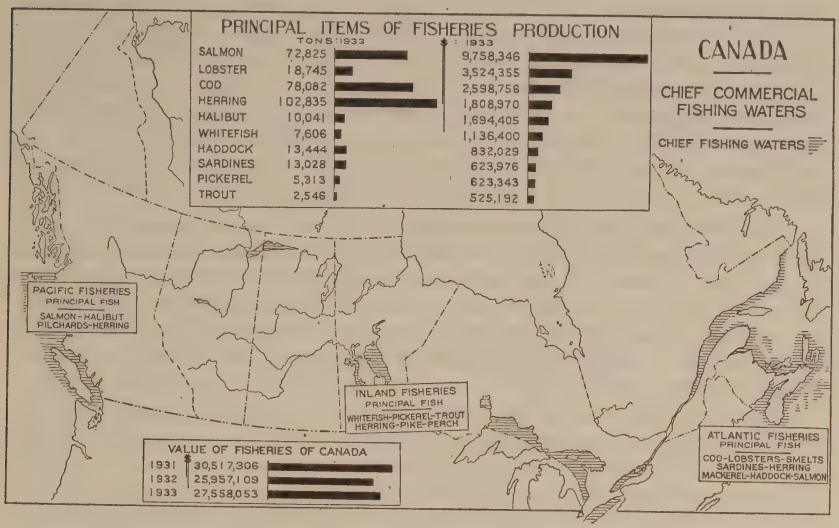
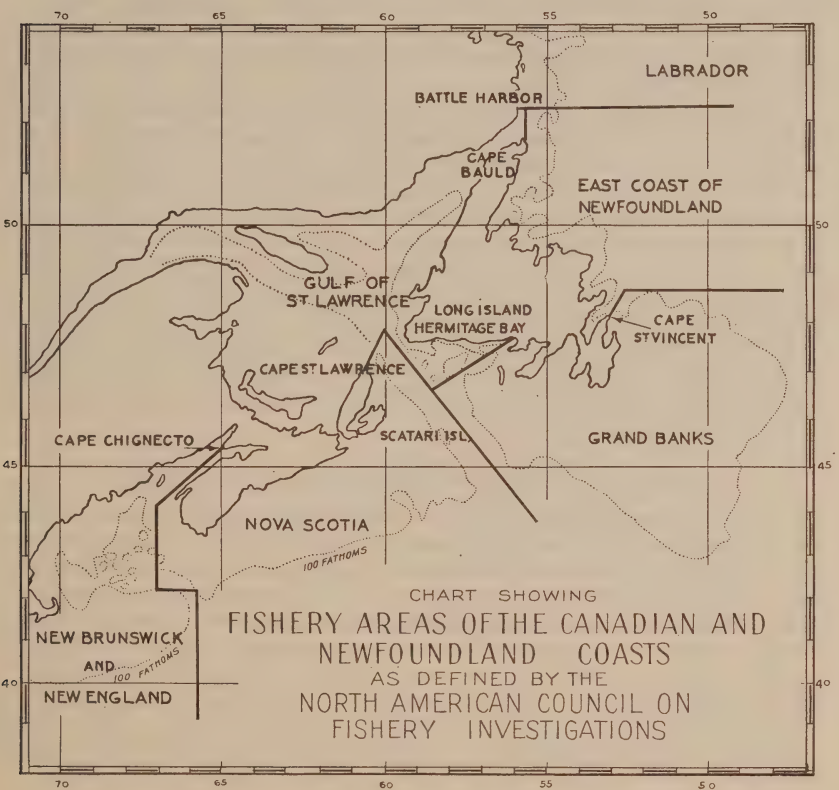
[1] Coyote or prairie wolf pelts for Manitoba are included with wolf pelts. [2]Revised since the publication of the 1933 Year Book.

CHAPTER XI.—THE FISHERIES.*

Section 1.—The Early Fisheries.



Fishing is one of the earliest and most historic industries of Canada. From a date which precedes authentic record, the Normans, the Bretons and the Basques were on the cod banks of Newfoundland. Cabot, in 1497, when he first sighted the mainland of North America, gave it the name of "Bacalaos", the Basque word for cod fish which he found already in use among those hardy seamen. Cape Breton, one of the oldest place-names in America, is another memorial of the early French fishermen—and the Spaniards and the Portuguese were but little behind. Fernandez de Navarrete mentions all three as frequenters of the Grand Banks before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds. The product was salted and dried on land and at the end of the season shipped to France. In 1534 Jacques Cartier found traces, in the gulf of St. Lawrence, of these early "Captains Courageous" and their rivalries in arms and in the capture of the teeming product which had tempted them so far from home. An establishment of the kind just mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has never since ceased to yield a perennial harvest to both Europe and America.



By the Treaty of Utrecht in 1713, Britain became the owner of Newfoundland and excluded the French from fishing and drying fish on certain sections of the coast, but France retained rights of fishing and of drying fish on other sections of the Newfoundland coast together with the fisheries of Cape Breton and the Gulf. These French rights resulted in the French Shore question which remained unsettled for nearly two centuries. The Seven Years' War (1756-63) put a stop to continuous fishing. At its close the Robin family of Jersey came to Canada and gradually acquired the former French fishing stations. Until the arrival of the Loyalists all other fishing but cod was neglected. Inshore fisheries alone (including those of the Labrador coast) were developed during this phase; no deep-sea fishing vessel put out from Lunenburg, now the chief centre of the deep-sea fishery, until 1873.

Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion of Canada are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000 square miles, or over four-fifths of the area of the fishing grounds of the North Atlantic.

*Revised by Miss F. A. Brown, Chief, Fisheries Statistics Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on Fish Caught, Marketed and Prepared, by provinces. These may be obtained from the Dominion Statistician.

CHART SHOWING
FISHERY AREAS OF THE CANADIAN AND NEWFOUNDLAND COASTS
AS DEFINED BY THE
NORTH AMERICAN COUNCIL ON FISHERY INVESTIGATIONS

In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas, they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered. Throughout the interior is a series of lakes which together contain more than half of the fresh water on the globe—Canada's share of the Great Lakes alone amounts to over 34,000 square miles, a total which, of course, does not include lake Winnipeg (9,457 square miles), lake Manitoba and others of even greater area.

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters from which they are taken. Judged by this standard, the Canadian cod, halibut, herring, mackerel, whitefish and salmon are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the above that it is impossible to deal adequately with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the enormous Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska and the fish resources of which are not known, the Canadian fisheries may be divided into Atlantic, inland and Pacific fisheries.

A detailed description of these respective fishing grounds of Canada, of the fish caught on these grounds, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

Lobstering is another distinctive industry. In 1870, there were three lobster canneries on the Atlantic coast of Canada; in 1933 the canneries numbered 329 and gave work to 6,000 people: 30,000,000 lobsters is a normal catch. The difficulty of enforcing regulations as to the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but with the co-operation of the fishermen there is hope that the fishery may be maintained and the annual harvest show no decline. In New Brunswick the canning of "sardines" (locally young herring and not a distinct type of fish) is second only to lobstering. Oysters, once plentiful everywhere, are now found in diminished quantities, but the Government is working towards the restoration of the industry through the development of oyster farming; favourable areas in Prince Edward Island waters have been seeded and the work in connection with oyster culture is being carried on under the direction of experts.

Section 3.—The Government and the Fisheries.

Upon the organization of the Government at Confederation, the administration of the Canadian fisheries and marine was placed in the charge of a department of the Dominion Government, which then exercised complete jurisdiction over the fisheries under the supervision of a Minister, with a large staff of inspectors, overseers and guardians to enforce the fishery laws. Early in 1930 a change in departmental organization was effected, whereby two departments, each in charge of a Minister, were created to administer respectively the Marine and the Fisheries.

In 1882, 1898, 1913 and 1920, decisions in the courts considerably altered the status of jurisdiction as between the Dominion and the provinces. The Dominion now controls the tidal fisheries of the Maritime Provinces and British Columbia

and the fisheries of Yukon and the Northwest Territories and the Magdalen islands. The non-tidal fisheries of the Maritime Provinces, the Prairie Provinces and Ontario, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are controlled by the respective provinces, but the right of fisheries legislation for all provinces rests with the Dominion Government. [See the Fisheries Act (R.S.C., 1927, c. 73).] The expenditure of the Dominion on the fisheries in the fiscal year 1933-34, including civil government salaries, contingencies, etc., was $1,599,567, and the revenue $132,581.

Conservation.—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion, the enforcement of closed seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1933, operated 24 main hatcheries, 9 subsidiary hatcheries and 8 salmon-retaining ponds at a cost of $205,682, and distributed 109,500,000 eggs, fry or older fish, mostly salmon and trout. The young fish are distributed gratis if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 at Malpeque bay, P.E.I., by the Dominion Department of Fisheries.

Direct Assistance.—Since 1927 fish collection services have been operated on several stretches of the Atlantic coast by the Department of Fisheries. Fishermen in the waters covered by the fish-collection boats are thus enabled to sell their catches promptly and have them delivered to purchasers at central points at small cost. They are also able to spend their time in catching fish instead of in preparing their catches for the dried-and cured-fish markets. Again, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, ice conditions along the coast and prevailing prices. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72), systems of instruction in improved methods of fish-curing and barrel-making have been in operation for several years.

Scientific Research.—Stations under the direction of the Biological Board of Canada for the conduct of biological research into the numerous complex problems furnished by the fisheries are established at Halifax, N.S., St. Andrews, N.B., and Nanaimo and Prince Rupert, B.C. The biological stations at St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax and Prince Rupert, attention is devoted to the practical problems of the fishing industry. A marine biological station, chiefly for oyster investigation work, is conducted at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. The Biological Board employs a permanent staff of scientists, and in addition, Toronto, McGill, Queen's, Manitoba, British Columbia and the chief Maritime Provinces' universities send workers to the several stations, chiefly professors and trained scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.

International Problems.—The chief international fisheries problem is the question of the rights of the United States, whose fishermen were granted, by the Treaty of Versailles, 1783, certain privileges in the Canadian inshore fisheries. Losing these by the War of 1812, the United States, after 1818, surrendered all but

their right to call at Canadian ports for shelter, wood, water, or to make repairs, and to fish around the Magdalen islands and on the north shore of the gulf of St. Lawrence from Point Joli eastward, and to dry and cure their fish in any of the unsettled bays on this portion of the North Shore.

Questions of interpretations to be placed on certain parts of the Treaty of 1818 were set at rest for the years 1854-66 by the Reciprocity Treaty. This treaty provided for the free admission into either country of the fish products of the other, and fishermen of each country were allowed to fish in the Atlantic territorial waters of the other, with the exception of specified rivers and other grounds.

In 1871, the Treaty of Washington revived the fishery provisions of the Reciprocity Treaty of 1854, and provided for a commission to determine the compensation to be paid by the United States as the difference in the value of the concessions mutually granted. This commission sat at Halifax in 1877, handing down the "Halifax Award", the amount of which was $5,500,000. In 1885, however, the United States terminated the fisheries articles of this treaty and a period of disagreement followed. A settlement was negotiated in 1888, when the plenipotentiaries of the two nations agreed to the "Unratified Treaty of 1888", which provided that United States' fishing vessels were to be granted, without fee, annual licences authorizing them to purchase provisions and outfits in Canadian ports, to tranship catches and to ship crews. Out of this treaty grew the so-called *modus vivendi* licences. Since it was recognized that the treaty could not receive official sanction before the commencement of the fishing season, it was agreed that United States' fishing vessels, on payment of $1.50 per registered ton, should receive annual licences conveying the above privileges. The treaty was rejected by the United States' Senate but Canada continued to issue *modus vivendi* licences up to 1918, when arrangements were made for reciprocal privileges in the ports of either country. The arrangement was discontinued in the United States on July 1, 1921. In the following year the *modus vivendi* licences were revived in Canada but the system was terminated on Dec. 31, 1923, and for several years United States' fishing vessels were limited to the provisions of the Treaty of 1818. In 1933 the two countries made a further arrangement, and the *modus vivendi* licence plan under which United States' vessels are allowed to enter Canadian ports to buy bait or to obtain supplies of water, is again in operation.

On the Great Lakes also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in British Columbia, where the sockeye of the Fraser are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners, and by trap nets and other methods forbidden in Canadian waters. In 1906 an international commission first discussed the question, while in 1922 the prohibition of sockeye fishing in the Fraser for five years, with a view to conservation, was recommended by a Parliamentary commission.

The Halibut Fishery.—The halibut fishery on this side of the Pacific is engaged in only from Canadian and United States' ports, but, owing to the fact that it is largely carried on beyond territorial waters, neither country alone can control it. At the same time it is in the interests of both countries that the fishery should be permanently maintained in a flourishing condition. The question of finding an adequate method of dealing with the matter was therefore referred to the Canadian-American Fisheries Conference that was appointed in 1918 by the Governments of

the two countries to consider the settlement of outstanding fishery questions between Canada and the United States. In 1922, Canada proposed that the halibut question should be considered by itself. This was agreed to, and resulted in the treaty signed Mar. 2, 1923, "For the Protection of the Pacific Halibut". Under this treaty a closed season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of both countries at Ottawa on May 9, 1930, and ratified by the Governments of the two countries on May 9, 1931, provided certain additional regulations in connection with the division of the waters into fishing areas, changing of dates for closed seasons, etc. This revised convention provides a simpler and more responsive system of control than was previously possible.*

Fishing Bounties.—An important though indirect aftermath of the Washington Treaty remains. By an Act of 1882 (45 Vict., c. 18), for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats on the Atlantic waters of $150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to $160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1933, payment was made under authority of the Deep Sea Fisheries Act (R.S.C., 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, $1 per registered ton, payment to the owner of any one vessel not to exceed $80; to vessel fishermen entitled to receive bounty, $6.10 each; to owners of boats measuring not less than 12 feet keel, $1 per boat; to boat fishermen entitled to receive bounty, $5.20 each. The claims paid numbered 12,836, compared with 12,292 paid in the previous year. The total amount paid in 1933 was $159,311. Details of the distribution of bounties for the years 1930 to 1933 are as follows:—

Fisheries Statistics.—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. The Department of Fisheries of the Dominion Government exercises jurisdiction over the fisheries of the Maritime Provinces, the Northwest Territories, Yukon and British Columbia; and the Fisheries Branches of Ontario, Quebec, Manitoba, Saskatchewan and

*For a pamphlet containing the text of this revised convention application should be made to the Department of Fisheries, Ottawa.

Alberta have jurisdiction over the fisheries of their respective provinces, excepting that in the case of Quebec the fisheries of the Magdalen islands are under the jurisdiction of the Dominion authorities. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work. Under the arrangement above referred to, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

Section 4.—The Modern Fishing Industry.

The existing fishing industry of Canada is in the main the growth of the past half century. No comparable figures of production are available for years prior to the confederation of the provinces, but about 1836 the production of fish in what are now the three Maritime Provinces had an estimated value of something like $1,500,000, while the production of Lower Canada was probably worth $1,000,000. In 1870 the total was $6,600,000 and this was more than doubled by 1878. In the '90's it passed $20,000,000 and in 1912, $34,000,000. The highest figure was reached in 1918, with over $60,000,000, but this was in a period of greatly inflated prices. Between that year and 1921 the total value of the products of the fisheries decreased and in the latter year was back to $34,000,000. From 1921 to 1926 a steady increase to $56,000,000 took place and in the following three years the value fluctuated around the $50,000,000 mark. The prevailing world-wide depression has affected the markets for fish products; the value dropped to $30,517,306 in 1931 and to $25,957,109 in 1932. In 1933 conditions were improved, and the value rose to $27,558,053. These figures represent the total values of fish marketed, whether in a fresh, dried, canned, or otherwise prepared state.

The number of employees, which was 74,882 in 1931, rose to 78,208 in 1932 and to 79,548 in 1933, while the value of the capital investment of the industry, which was $45,325,514 in 1931, fell to $41,789,278 in 1932 and to $40,912,857 in 1933.*

Among individual fish products the cod and the salmon long disputed the primacy; if the record is taken back to early times, the cod is the most valuable fish; in the past 30 years, however, the salmon has definitely taken the lead, and the heavy pack and relatively high price of lobsters have, in recent years, sent cod down to third place. Halibut, for a number of years prior to 1931, occupied fourth place but has now dropped to fifth place, yielding fourth place to herring. These changes have, of course, affected the relative standing of the provinces, British Columbia now occupying the leading place that in earlier times belonged to Nova Scotia, and producing in recent years fish products to nearly half the total value. The yearly record of production since 1870, the total production by provinces for the past six years, and the record by values of principal fish products for the past five years in descending order of importance, are shown in Tables **2**, **3** and **4**. The aggregate value of production in 1933, $27,558,053, shows an increase of 6 p.c. over the figure of $25,957,109 in 1932.

* For detailed historical statistics of the fisheries, see pp. 52-56 of Fisheries Statistics of Canada, 1933, obtainable from the Dominion Statistician.

2.—Total Values of the Products of the Fisheries of Canada, 1870-1933.

NOTE.—From 1870 to 1906 inclusive, years ended June 30; from 1908 to 1917 (a) inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine-month period ended Mar. 31, 1907.

Year.	Value.	Year.	Value.	Year.	Value.	Year.	Value.

[1] Quantities caught. [2] Values marketed.

Quantities and Values in Recent Years.—The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Tables **5** and **5A** by working out what the values would be in a later year if prices had remained the same as in the preceding year. From 1931 to 1932 there was a decline of 15 p.c. in the total value of the fisheries. The decrease due to lower prices was 11·5 p.c., while that due to a smaller catch was 3·5 p.c. In 1933 there was some improvement and total value increased by 6·2 p.c. over 1932. The increase due to better prices was 4·3 p.c., while larger quantities caught accounted for an increase of 1·9 p.c. in total values. The improvement in 1933, although encouraging as the first change in a declining trend which had persisted since 1928, was not large, so that total values in 1933 were still lower than those of 1931 by 9·7 p.c.—7·9 p.c. due to lower prices and only 1·8 p.c. due to smaller catch. During the longer period from 1928 to 1933 total values have declined from $55,051,000 to $27,558,000 or by 50·0 p.c. The decline due to lower prices has been 28·8 p.c., while that due to a reduction in the catch has been 21·2 p.c.

Operations in 1933: Detailed Record of Production.—The total value of the products of the Canadian fishing industry in the calendar year 1933 was $27,558,053, as compared with $25,957,109 in 1932 and $30,517,306 in 1931. In Tables **6** and **7** will be found statements for the whole of Canada of each fish and fish product marketed in 1933, with comparative figures for the preceding year—Table **6** dealing with sea fish and Table **7** with products of the inland fisheries. In Tables **8** and **9** the numbers of the fish-canning and -curing establishments are shown, together with the materials used and values of the products.

Capital and Employees.—In 1933 capital investments in the fisheries were as follows: (a) in vessels, boats, nets, weirs, traps, wharves, ice-houses, etc., used in the primary operations of capturing the fish, $25,380,082, of which $21,093,282 was invested in the sea fisheries and $4,286,800 in the inland fisheries; (b) in fish-canning and -curing establishments (land, buildings, machinery, supplies on hand, cash and operating accounts), $15,532,775—grand total $40,912,857. The number of employees engaged in the primary operations of fishing was 65,506 in 1933, and in canning and curing establishments, 14,042, a total of 79,548. The total salaries and wages bill in canneries and fish-curing establishments was $3,024,068. Tables **10** and **11**, herewith, show the items included in the above totals, with comparative figures for 1932, while Table **12** analyses the salaries, wages and earnings of the employees in canneries, etc.

Trade.—For reasons already noted, the domestic consumption of fish is relatively small in Canada, and the trade depends largely upon foreign markets. From 60 to 70 p.c. of the annual catch is an average export. In the calendar year 1933 fishery products worth $8,796,015 went to the United States and $4,384,007 to the United Kingdom. The most important single export is canned salmon (to Great Britain and European markets), followed closely by canned lobster, while cod, dry-salted (to the West Indies, South America, etc.) is third in order of value. For fresh fish, especially whitefish and lobsters, the United States is the chief market. Canadian imports of fishery products in the calendar year 1933 amounted to $1,694,325. A general review of the import and export trade in fish for 33 years past is given in Table **13**, by fiscal years, while Table **14** gives a comparative record of exports, by countries, during the calendar years 1932 and 1933. Table **15** shows the leading items of export for the calendar years 1931-33. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

13.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-34.

NOTE.—In this table "Exports" include seal skins and fish oils, and "Imports" include turtles, whalebone, shells and their products, seal skins, fish oils and ambergris, in addition to fishery products as shown in Tables **12** and **13** of Chapter XVI of External Trade, in this volume.

CHAPTER XII.—MINES AND MINERALS.*

An article on the geology of Canada, referring to the chief mineral-bearing areas of the Dominion, will be found at pp. 18-28 of the present edition of the Year Book. This is followed by an account of the chief discoveries and investigations of mineral-bearing ores in 1932 and 1933, at pp. 29-38; similar articles for earlier years were published in previous editions. These articles furnish references to more detailed sources of information in the publications of the Dominion and Provincial Governments and in the scientific journals.

The Mines and Minerals chapter of the Year Book is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws, (2) a summary of general production, (3) the industrial statistics of the mining industries, (4) production of metallic minerals, (5) production of non-metallic minerals, (6) production of clay products and structural materials.

For more detailed information on the mineral production of Canada the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

Statistics of Mines and Minerals.—The compilation and publication of statistics of the production of mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent out to the mining producers are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

Annual and Monthly Statistical Reports.—Detailed statistics of the mineral production of the Dominion are published annually in a comprehensive Dominion-wide report, which includes detailed tables of production, capital invested in the mining industry, number of employees, salaries and wages, fuel and machinery used in mining, together with tables showing imports and exports of minerals and their products, and a résumé of general mining conditions. The latest of these reports available for distribution at the time of writing covers the calendar year 1933 and may be obtained from the Dominion Statistician on request.

A summarized report on mineral production, giving fairly detailed preliminary figures for the preceding calendar year, is issued about Mar. 15 of each year, and the salient points are reviewed at the Annual Meeting of the Canadian Institute of Mining and Metallurgy held in the first week of April. (The 1934 report is now available.) Further, a bulletin, issued each year at the beginning of January, gives the most accurate estimate then possible for the mineral production of the year just closed. In addition to the above, annual bulletins giving the detailed production of each mineral are issued as soon as the final figures become available in each case.

Monthly statistics of the physical production of 16 of the leading minerals of Canada have been compiled for the past six years and are published separately in monthly bulletins. These figures indicate the current trend of activity in mining operations.

*Revised by W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section 1, under "Production".

Coal Statistics.—Coal is perhaps the most important of all minerals, from the point of view of the general public. This special position is recognized in some measure by the publication of an annual report on coal statistics, giving complete details of coal-mining operations in the various coal-producing provinces and showing the imports and exports of coal by kinds and by ports of entry and exit, together with industrial statistics in relation to coal mining. Monthly bulletins and quarterly reports on coal and coke statistics are also issued, giving coal and coke production and imports and exports, the quarterly printed reports showing in detailed form production of coal by areas, and imports and exports by ports of entry and exit.

Section 1.—Mineral Lands Administration and Mining Laws.

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces in 1930, all other mineral lands lying within the boundaries of the several provinces have been administered by the respective Provincial Governments.

Subsection 1.—Dominion Mining Laws and Regulations.*

Dominion lands to which these regulations apply are those administered by the Department of the Interior, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

Placer.—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over. Claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, $200 in Yukon and $100 elsewhere. Royalty 2½ p.c. under Yukon Placer Mining Act.

Quartz.—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen and oil shales.

Under the newer regulations, effective Apr. 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must hold a miner's licence, the fee being $5 for an individual, from $5 to $20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for two other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51·65 acres, being 1,500 feet

*For copies of any of the regulations referred to, application may be made to the Lands, Northwest Territories and Yukon Branch, Department of the Interior, Ottawa.

square. Entry is granted by a mining recorder, fee $5 for a claim located by a licensee on his own licence, and $10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of $100 being done on the location each year. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of $500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a claim not exceeding 51·65 acres being $50. The cost of the survey, reckoned as $100, may be counted as work done on the claim. When the profits of a mine exceed $10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners' licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is $10 and only 8 mineral claims can be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon.*—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories.*—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories.*—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone and gravel from beds of rivers.

Subsection 2.—Provincial Mining Laws and Regulations.

Nova Scotia.—All minerals in Nova Scotia, except limestone, gypsum and building materials, are the property of the Crown. They are dealt with under the provisions of the Mines Act (c. 22, R.S.N.S., 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22) and 1933 (c. 12), and are administered by the Minister of Public Works and Mines, at whose office in the Parliament Buildings, Halifax, all records of mining titles are kept.

The chief mineral product of Nova Scotia is coal, which is subject to a royalty of 12½ cents per long ton. Coal used in mining operations, or for domestic purposes by workmen employed about the mine, is exempted from royalty. Other important minerals of Nova Scotia are gold, salt, lead, zinc, copper, diatomaceous earth, manganese, antimony, gypsum and limestone.

Licences to search for mineral, good for a year, are issued at a nominal fee. More permanent holding is obtained by lease, which, in the case of minerals other than gold and silver, is granted for 20 years (subject to payment of an annual rental and the performance of work), the lease carrying the right to three successive renewals of 20 years each. A lease for gold and silver is given for 40 years, subject to a small annual rental and performance of work.

Full information concerning minerals and mining laws may be obtained by writing the Department of Public Works and Mines at the above address.

New Brunswick.—In most grants of Crown land since about the year 1805, all mines and minerals are reserved to the Crown and regarded as property separate from the soil. Prior to that time, most of the grants reserved only gold, silver, copper, lead and coal. Royalties levied are 10 cents per long ton on coal and 5 p.c.

on the value at the well's mouth for petroleum and natural gas. Prospectors must obtain a licence costing $10, good for the calendar year, entitling the prospector to stake up to 10 claims of 40 acres each. Claims must be registered within 30 days and 25 days' work done on each claim within the year, after which a mining licence, renewable annually on the payment of $10 per claim, will be granted. Administration is carried on under the provisions of the Mining Act (c. 35, R.S.N.B., 1927). For full information apply to the Department of Lands and Mines, Fredericton, N.B.

Quebec.—The mining lands of Quebec are administered by the Minister of Mines, subject to the provisions of the Quebec Mining Act (c. 80, R.S.Q., 1925) and amendments.

In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and, in the case of gold and silver, on lands granted previously to that date. All mining rights belong to the Crown in most of the seigneuries.

Mining lands up to 200 acres can be acquired by staking the ground as prescribed by the Mining Act. Claims must be recorded and 25 days work per claim done within 12 months, when a mining licence is granted upon payment of 50 cents an acre and a recording fee of $10. The licence is renewable annually. When a mineral occurrence of importance has been found, the mining rights can be purchased as a mining concession for $5 per acre for superior minerals and $3 per acre for inferior minerals.

Mining operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated up from 3 p.c. A mining inspector is appointed in each mining division for the administration of the mining laws and regulations.

Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines.

Ontario.—Ontario owns and administers for mining purposes, through her Department of Mines, all the Crown lands within her boundaries except Indian lands. Mining lands are subject to the provisions of the Mining Act (c. 45, R.S.O., 1927). Title is a grant in fee simple, except in provincial forests, where the lands are leased. A resident mining recorder is appointed for each mining division in the mineral areas. There is a tax of 5 cents per acre per annum on patented and leased mining lands in unorganized territory. Other taxation is on the net profits, the rate being 3 p.c. up to $1,000,000; 5 p.c. from $1,000,000 to $5,000,000 and 6 p.c. on the exeess above $5,000,000. The first $10,000 of profit is exempt. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or, on appeal, by the judge of the Mining Court of Ontario.

A miner's licence is necessary to stake out or acquire Crown lands for mining purposes, fee $5 per year for an individual; for companies, $100 on each million dollars capital. The holder may stake out for himself three claims in any and every mining division, and six additional for other licence holders, but not more than three for any individual licensee. A mining claim in unsurveyed territory is a square of 20 chains to a side (40 acres) with lines N.-S. and E.-W. astronomically. Where land is subdivided into lots a claim may be an eighth, a quarter or a half lot, *i.e.*, up to 50 acres.

There are special provisions regarding petroleum, natural gas, coal and salt on the James Bay slope, where these substances may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

Full information concerning mineral resources and mining laws may be obtained by writing the Department of Mines, Parliament Buildings, Toronto, Ontario.

Manitoba.—With the transfer of the natural resources to Manitoba on July 15, 1930, control of most of the public lands passed to the Department of Mines and Natural Resources of the Manitoba Government.

The Mines Act (c. 27, 1930) and regulations thereunder govern the administration and leasing of: (1) Mineral claims—gold, silver, copper, zinc, etc.; (2) Boring permits—coal, natural gas, oil shale, petroleum and salt; (3) Quarrying locations—granite, limestone, marble, slate or any building stone, gypsum, gravel, marl, peat and sand.

A miner's licence is necessary to stake out Crown lands for mining purposes; fee is $5 for an individual and larger amounts for mining partnerships and mining companies. A licensee may, in any one licence year and in any one mining division, stake out for himself not more than three mineral claims and not more than six for other licensees, being a maximum of nine in all, provided that not more than three claims shall be staked out or applied for on behalf of any other such licensee. He may also obtain one boring permit or one quarrying location.

A mineral claim in unsurveyed territory is a square of 1,500 feet (51·65 acres) with lines N.-S. and E.-W. astronomically. A boring permit allows 640 acres to be taken up and a quarrying location may cover an area up to 40 acres. The fee is $5 for recording a claim located by the licensee and $10 if recorded on behalf of another licensee. After recording, 25 days work per claim must be done per year for 5 years. A maximum of nine claims may be grouped for the purpose of this work. When 125 days work has been done, and certain other requirements complied with, a lease is granted. The cost of the survey may be reckoned as one years work done on the claim.

A boring permit good for one year is necessary to search for oil, coal, gas or salt. If mineral is discovered a 21-year lease may be obtained subject to annual rental and certain annual work.

Lands containing granite, limestone, marble, slate or any building stone, together with clay, gravel, gypsum or sand may be leased at an annual rental, provided $2.50 per acre per annum be expended in taking out the material.

For a copy of the regulations governing the disposal of mineral rights, apply to the Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba. Mining recorders' offices are located at Winnipeg and The Pas.

Saskatchewan.—On Oct. 1, 1930, Saskatchewan came into control of its natural resources, which had previously been controlled and administered by the Dominion. By the Mineral Resources Act of 1931, regulations, differing somewhat from those of former Dominion laws, have been brought into force dealing with coal, petroleum and natural gas, and placer. Except for these changes, the regulations are similar to the former Dominion ones.

Coal.—The area which may be taken for a location is now from 20 to 640 acres. Application may be made by mail or in person and any eligible person may apply

for three locations. The length of a location must not exceed three times the breadth. The minimum required to be mined annually is 5 tons per acre. Prior to commencing, a lessee must secure a permit to operate.

Petroleum and Natural Gas.—Applications may be made by mail or in person. The area of a location for unsurveyed land may be 160 to 1,920 acres but, while one applicant is allowed three locations, the total area must not exceed 1,920 acres. A permit must be obtained before commencing operations and all drillers must secure a licence of competency to ensure that drilling will be efficiently carried out. The record of a driller may be obtained by payment of a fee. Operators are required to furnish a substantial bond to guarantee compliance with the regulations.

Permits to prospect for oil and gas are granted under similar regulations except that a cash rental of 10 cents per acre is required and a bond of 40 cents per acre which is forfeited if work to determine structure is not carried out within one year.

Placer.—These regulations remain as under Dominion administration except that 30 instead of 10 adjoining claims may now be grouped.

The Saskatchewan Mines Act provides for the competency of mine managers and pit bosses, for the reporting of accidents, and generally for the welfare and safety of those employed in the production of minerals.

For further information apply to the Department of Natural Resources, Regina, Saskatchewan.

Alberta.—Since the Dominion Government in 1930 transferred control of the natural resources lying within the boundaries of Alberta to the Provincial Government, the leasing or disposal of mineral lands or rights is administered under provincial laws and regulations. However, mineral lands or rights within the province are being administered by the Provincial Government in accordance with the Dominion mining laws and regulations in force at the time of the transfer.

The Coal Mines Regulation Act of the province of Alberta and regulations made thereunder make provision for the safe operation of mines in the province, applying to mines of coal, ironstone, shale, clay and other minerals. Operations must be under the control of officials who hold certificates granted after suitable examination. A staff of inspectors is provided to administer the regulations. Monthly reports of operations must be returned to the Minister.

The Coal Sales Act requires that all coal mines shall be registered by name and all coal produced in Alberta sold under the registered name. The Coal Miners' Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Utility Commissioners.

British Columbia.—The Department of Mines, organized under the provisions of c. 163, R.S.B.C., and amendments, administers mineral lands, and has charge of all matters relating to mining, including the Bureau of Mines and all offices established under the Bureau of Mines Act and all Government offices in connection with the mining industry.

The terms of the mining laws are favourable to the prospector, fees and rentals being small. On a lode mine of 51 acres an expenditure of $500 in work, which may be spread over 5 years, is required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding $5 per acre. Any person over the age of

18 and any joint stock company can obtain a "free miner's certificate" on payment of a fee, which for the individual is $5 per annum and for a joint stock company either $50 or $100 per annum depending on capitalization. Mineral claims located under the provisions of the Mineral Act must not exceed 1,500 square feet.

Placer.—Placer mining is governed by the Placer Mining Act and its scope is defined as "the mining of any natural stratum or bed of earth, gravel, or cement mined for gold or other precious minerals or stones".

Placer Claims.—Placer claims are of 3 classes, as follows: (1) Creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) Bar diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) Dry diggings, over which water never extends—250 feet square.

A placer claim must be worked by the owner, or someone on his behalf, continuously during working hours. Discontinuance for 72 hours, except in closed season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner, is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before expiration of the year.

Placer Leases.—Leases of unoccupied Crown lands approximately 80 acres in extent may be granted by the Gold Commissioner of the district, the annual rental for same being $30 and the annual expenditure required in development work $250. Dredging leases on rivers below low-water mark also are granted for 5 miles; the annual rental for same is $25 per mile and the annual expenditure required in development is $1,000 per mile, the value of any new plant or machinery employed to count as development. Leases of precious stone diggings, 10 acres in extent, may also be obtained.

Section 2.—Summary of General Production.

Since 1886, the first year that the Geological Survey issued complete returns of mineral production, Canada has shown a fairly steady growth in mineral output. In that year the per capita production was only $2.23; in 1901, five years after the Yukon discoveries, production totalled $12.16 per capita, but there was a falling-off from 1902 to 1904. Thereafter, owing to the discovery of silver in the Cobalt area, the development of the copper-nickel ores of the Sudbury district, the opening up of the gold mines of Porcupine and Kirkland Lake in Ontario, the improvements in metallurgical practice which led to the recoveries of large quantities of lead and zinc from British Columbian ores, and the discoveries and developments in Quebec and Manitoba, the per capita production rose to $31 in 1929, although owing to world-wide economic depression it dropped to $18.20 in 1932, later increasing to $20.73 in 1933 and about $25.62 in 1934 with the general improvement in economic conditions.

In 1933, the latest year for which complete world figures of the Imperial Institute are available, Canada stood first in the production of asbestos and nickel, second in the output of gold and cobalt, third in copper, silver, zinc, and lead, and thirteenth in the production of coal. During that year Canada produced approximately 82 p.c. of the world production of nickel, 75 p.c. of the asbestos, 20 p.c. of the cobalt, 13·2 p.c. of the gold, 9·3 p.c. of the silver, 13·4 p.c. of the copper, 10·2 p.c. of the lead and 10·2 p.c. of the zinc.

The Preliminary Report on the mineral production of Canada, based on a special survey of the industry by the Bureau and released on Mar. 17, 1935, shows a total valuation of $277,492,263 for the mineral output of the Dominion in 1934 compared with $221,495,253 in 1933. This represents an increase of 26 p.c. and reflects the continuation of the improved conditions commencing in 1933.

Prospecting for gold ores and the exploration and development of known auriferous deposits were more extensively carried on throughout Canada during 1932, 1933 and 1934 than for many years. These activities were common to both the older producing camps and new areas. The higher price for gold stimulated the study and examination of new deposits or ore zones heretofore considered of doubtful economic importance. In certain of the older camps properties closed prior to the revaluation of gold were reopened and placed in production or further explored as to their possibilities. In some of the producing mines the higher price for the metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves. During 1933, notable gains in production, compared with 1932, were recorded in the base metal mining industry and these gains were extended during 1934. The more outstanding of these were in copper, lead, nickel and zinc and it is creditable to the organizations engaged in the production of these particular metals that they should be able to expand production at the prevailing low level of prices.

Production of various non-metallic minerals, especially asbestos and coal, realized important gains in 1933 and 1934. The gains in the structural materials industries were particularly encouraging during 1934, as recessions had been severe during the period of business depression.

Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1932 and 1933, with the percentage of increase or decrease in the latter year, and Table 2A preliminary figures of production for the principal minerals in 1934.

1.—Value[1] of Mineral Production in Canada, calendar years 1886-1934.

[1]According to Preliminary Report, March, 1935. All figures are subject to revision.

[2]Exclusive of a small production of selenium, tellurium, radium and uranium, statistics of which cannot be published owing to there being less than three producers.

[3]Sulphur content of pyrites shipped and estimated sulphur contained in sulphuric acid made from smelter gases.

Volume of Mineral Production in Recent Years.—An interesting comparison of the mineral production of the two years 1932 and 1933, as to quantities and values, is furnished in Table 3.

The percentage increase or decrease in quantity production of individual minerals is shown in Table 2, pp. 376-377, but, owing to the many different units in which the quantities of different minerals are expressed, the total volume of production from year to year is difficult to compare, while the wide variations in prices make comparisons of total values misleading. Table 3 constitutes an attempt to overcome these difficulties by working out what the values would have been in the later year if prices had remained the same as in the earlier, thus obtaining the increases or decreases due to changes in quantity alone; these are shown in the last column.

The total value of mineral production in 1932 decreased 16·1 p.c. from 1931. Reduced quantities accounted for a decrease of 15·5 p.c. The contraction was particularly severe in the quantity of clay products (51·8 p.c.), other structural materials (44·4 p.c.) and non-metallic minerals (24·7 p.c.). Mineral production in 1933 recovered from the low level of 1932 to a value approaching that of 1931. However, Table 3 shows that this recovery of value was made up in large measure of higher prices which accounted for an increase of 10·9 p.c. in value, while larger quantities accounted for an increase of only 4·9 p.c. The recovery from 1932 was largely in both the quantities and prices of metallic minerals. The quantities of clay products and other structural materials produced in 1933 were below the low levels established in 1932.

Mineral production in Canada reached its highest recorded total value of $310,850,000 in 1929. During 1930 the production of metallic minerals increased still further in volume by 11·8 p.c., though declining prices reduced the total value of metal production, while non-metallic minerals and structural materials declined in both volume and value. By 1931 declining prices curtailed the volume of metallic minerals so that in that year and the next (1932) there were declines in both volume and value in all the major branches of mineral production. However, the production of metallic minerals in 1932 was still 3·7 p.c. greater in volume than in 1929, although there had been drastic declines in prices resulting in a reduction of 27·5 p.c. in total value. In that same year the production of fuels was 28·9 p.c., of other non-metallics 47·8 p.c., of clay products 72·1 p.c., and of other structural materials 57·6 p.c. smaller in volume than in 1929. The general decline in prices was arrested by 1933 and in that year the prices of metallic minerals and of non-metallics other than fuels showed a stronger trend. This was accompanied by an increased volume of production in both metallic and non-metallic minerals, although there were further declines in structural materials. Compared with 1929 the volume of production during 1933 was 12·3 p.c. greater for metals, 28 p.c. lower for fuels, 41·2 p.c. lower for other non-metallics, 80·1 p.c. lower for clay products and 68·7 p.c. lower for other structural materials. The grand total value of mineral production in 1933 was $89,355,000 (28·7 p.c.) less than in 1929. The decline due to lower prices was 11·7 p.c., while that due to a generally smaller volume was 17 p.c., the increased volume of metals being more than offset by the contraction in other branches of the mineral industry. Preliminary figures for 1934 indicate a change

to an upward trend in structural materials, the most severely restricted branch of the industry, and a continuation of the upward trend in metals, fuels and other non-metallic minerals. The favorable change in the production of structural materials during the past year accompanied an increase in the activity of the construction industry.

Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 41·6 p.c. of the Dominion total in 1932 and 49·8 p.c. in 1933. The rise in the price of gold has been especially favorable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 14 p.c. and 13·9 p.c. of the Dominion totals in 1932 and 1933, respectively. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 12·8 p.c. of the total for Canada in 1932 and 12·7 p.c. in 1933. Whereas formerly non-metallics (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba in recent years has been making a growing contribution to the production of gold, copper and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1910 is given in Table 4.

4.—Mineral Production of Canada, by Provinces, calendar years 1911-34.

NOTE.—Figures for the years 1899–1910, inclusive, will be found at p. 345 of the 1933 Year Book.

[1]Includes a small production from Prince Edward Island. [2]Includes a production from the Northwest Territories in 1932-34. [3]The figures for 1932 have been revised since the publication of the 1933 Year Book. [4]Figures for 1934 are subject to revision.

The quantities and values of the minerals produced in each province during 1932 and 1933 are shown in Tables 5 and 5A. These tables show the different minerals which make up the mineral production of each province and also the particular province or provinces which contribute to the production of each mineral in Canada.

5.—Mineral Production of Canada, by Provinces, calendar year 1932.

NOTE—The mineral production of Yukon and Northwest Territories during the calendar year 1932 was as follows, in quantities and values:—gold 40,608 fine oz., $953,438 (including premium); lead 3,853,327 lb., $81,444; silver 3,053,188 fine oz., $966,994; and coal 808 tons, $3,491; total $2,005,367.

5A.—Mineral Production of Canada, by Provinces, calendar year 1933.

NOTE.—The mineral production of Yukon and the Northwest Territories during the calendar year 1933 was as follows in quantities and values: Gold 39,493 fine oz., $1,129,500 (including premium); lead 3,099,505 pounds, $74,128; silver 2,227,476 fine oz., $842,717; coal 862 tons, $3,670; and petroleum 4,608 brl., $23,037; total $2,073,052. Radium and uranium salts were produced in Canada during 1933 from ores mined in the N.W.T., but statistics pertaining to these minerals are not available for publication. For Dominion totals see pp. 376-377.

Section 3.—Industrial Statistics of Mines and Minerals—Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and gross and net production. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

The values produced by the metallic industries given in Tables **6** and **7** are those reported by the operating companies, and are in each case the settlements received for shipments by mine operators and the additional value obtained when the smelting of these ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc and silver, the values are computed by using the average prices for the year in the principal metal markets. Furthermore, the production figures of Table **2** include all quantities shipped from the mines, while metals absorbed in new metallurgical operations or remaining in stock at smelters and refineries are not included in the industrial figures of Tables **6** and **7**. On the other hand, some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net value of the products

of these plants includes, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin. Furthermore, up to and including 1931 the total value of Canadian mineral production as shown in Table 1 was computed with gold valued at the standard price of $20·671834 per fine oz., and thereafter at the same price plus the estimated amount of exchange equalization paid the producer, whereas the totals given in Tables 6 and 7 include the actual receipts for gold produced as reported by the producers. For these reasons the industrial statistics are somewhat at variance with the figures representing the computed value of metallic mineral production.

The total net value of products of the fuel industries in Table 7 is less than the total production of fuels in Table 2, because the net value of products of the industries is confined to that for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced, whether the producer actually receives payment in any form for them or not. Thus in coal mining, the industrial values in Table 7 include only coal sold, supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum producers have a larger monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption, without any industrial organization intervening between producer and consumer.

For other non-metallic minerals (if the small production of peat normally included with fuels is deducted) and clay products and structural materials, returns to the producing industries are the same in each case as the total value of the mineral commodities produced.

The Growth of the Mining Industry in Recent Years.—Annual publication of industrial statistics of the mining industry, showing capital employed, the number of employees, the salaries and wages paid, the cost of fuel and electricity, and the net value of the products did not commence until 1921. In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including (1) present value of lands, buildings, plant, machinery and tools, (2) cost of materials on hand, supplies, finished products and ore on dump, and (3) cash, trading and operating accounts and bills receivable. It should be specially noted that no estimate of undeveloped ores is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings should be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore is utilized, such workings become part of the productive plant and as such their cost is an item of capital. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital should be used with such reservations in mind.

The substantial growth of the mining industry in Canada during the post-war years is established by the summary statistics of Table 6. From 1922 to 1929—a period of slowly declining prices—the output increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages paid by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This is reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

Since 1929 the mining industry in Canada has been affected by the world-wide economic disturbances which have so greatly influenced industries in all countries. It is instructive to trace the effects of the depression in the industrial statistics of mining. The course of the depression was accompanied by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc and silver. Indeed, while prices of these metals at the beginning of 1935 have risen somewhat above their low points, they are still at a low level. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing. Under the influence of these price changes, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees, 30 p.c. in salaries and wages paid and 24 p.c. in the value of fuel and electricity used. But, since the higher price for gold stimulated its production and the readjustment of costs stabilized the base metal industries, metal production in 1933 showed a good recovery, the net sales in 1933 being only 8 p.c. below those of 1929, employees 18 p.c. below, salaries and wages 25 p.c. below, and the cost of fuel and electricity 8 p.c. above 1929. While industrial statistics for 1934 are not yet available, the production figures for this latest year indicate a metal production valued at about 18 p.c. more than the former peak year 1929. Doubtless in reaching this new record the influence of gold is important through increased production, higher value, and its association with other metals, especially copper. However, in 1934, not only gold but nickel, copper, lead and zinc were all produced in Canada in larger quantities than ever before, from which it must be concluded that the producers of these metals are able to operate profitably at even the low prices prevailing for copper, lead and zinc, and that a return to former average price levels would find the Canadian metal-mining industry firmly established on a much larger scale than ever before.

Among the non-metallic industries the most important is coal mining. During the depression, the demand for coal declined owing to reduced requirements for fuel in industrial and transportation activities. Similarly the demand for asbestos and gypsum has been affected by the lower level of industrial and construction operations. Salt has been an exception to the general rule, as its production has been well maintained throughout. Indeed, in 1932 and 1933 the net sales of the salt-

producing industry were about 23 p.c. above those of 1929. Taking the group of non-metallic industries as a whole, net sales declined by 32 p.c. from 1929 to 1932, employment by 21 p.c. and salaries and wages by 36 p.c., and, while net sales increased slightly in 1933 from the low point of 1932, the decline continued in employment and total remuneration of employees. Production in 1934 showed a decided improvement, probably indicating that costs have been so readjusted within the group as to place production again on a profitable basis and ready to expand with increasing demand.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operations in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction was more active in Canada in 1934 than in 1933 (see p. 512) and this increased activity was accompanied by a welcome change to a rising trend in the production of clay products and other structural materials.

6.—Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1921-33, and by Provinces, 1932 and 1933.

Group and Year.	Firms.[1]	Capital Employed.	Employees.	Salaries and Wages.	Fuel and Electricity.	Net Sales.[2]

[1]This figure not given by provinces in recent years. [2]Gross value less freight and treatment charges and less value of ores charged in the case of smelters. [3]Electricity was not included in 1921 and 1922.

[4]Fuel and electricity used for metallurgical purposes and not included above consisted of: bituminous coal from Canadian mines, 244,701 tons valued at $1,657,991; imported bituminous, 109,006 tons at $578,272; coke, 129,605 tons at $1,165,432; fuel oil, 7,218,294 gal. at $327,775; wood, 5,489 cords at $28,963; manufactured gas, 45,886 M cu.ft. at $4,998; electricity, 380,331,833 k.w.h. at $1,232,104; and other fuel at $22,079; total value, $5,017,614.

The Principal Mineral Industries.—A summary of the industrial statistics of the principal mineral industries operating in Canada in 1932 and 1933 is presented in Table 7. Coal mining has the largest labour force and the largest labour bill. In fact, in the years 1932 and 1933 salaries and wages in coal mining amounted

to 71 p.c. and 66 p.c. of the value of net sales. This was probably an abnormally high proportion owing to declining output and prices and abnormally low profits during those difficult years. Auriferous quartz mining was second to coal mining with about half the number of employees. Its salaries and wages bill was nearly as great, however, as that of coal mining, since employment is much less subject to seasonal fluctuations. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

7.—Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1932 and 1933.

Industry and Year.	Firms.	Capital Employed.	Employees.	Salaries and Wages.	Fuel and Electricity.	Net Sales.[1]

[1]Value of shipments by mine operators and of products sold by metallurgical works, less estimated cost of ores, concentrates, matte, etc., treated, irrespective of their origin. The major part of the value of ores treated is included as products of mines and mills, but there is necessarily a lag between production or ores and sales of smelter products, while some imported ores are also treated in Canadian smelters.

[2]Value added by smelting and refining.

[3]Includes a small production of peat, normally included in fuels.

Section 4.—Production of Metallic Minerals.

Subsection 1.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 8 and 9. The preliminary official estimate for 1934 is 2,964,400 fine oz.

In 1931 the value of gold produced in Canada exceeded that of coal for the first time. Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities with a consequent reduction in their operating costs, as well as an increase in the purchasing power of their product, but also from the rise in the price of gold in the world market. The more outstanding events associated with this rise in price may be briefly outlined. The United Kingdom suspended specie payments on Sept. 21, 1931, and the gold exchange value of the pound sterling declined rapidly. The Canadian Government first assumed control of gold exports by a licensing system and later undertook to purchase all new gold bullion produced in the Dominion, paying the producer a premium over the standard price to equalize the exchange difference. The United States departed from the gold standard on April 19, 1933, and on Jan. 31, 1934, the United States' Treasury announced that it would buy gold at $35 per fine oz.; thus establishing a new par of $15\frac{5}{21}$ grains for the U.S. dollar. On June 15, 1934, the Canadian Parliament passed legislation instituting a special tax on gold produced in Canada. This tax applied only to producing companies which had paid dividends continuously since the beginning of 1933, and consisted of a levy of 25 p.c. on the premium value of gold produced from ore mined in Canada, provided that the tax did not reduce the price received by the producer below $30 per fine oz. Deductions for income tax were allowed.[1]

In the circumstances outlined above gold has ranked first among the minerals of Canada since 1931. Under the stimulus of higher prices prospecting for gold has been more active during the past two years than ever before. Favourable results from these activities, with new mines coming into production and expansion in numerous producing mines, give every prospect for a continued increase in gold production.

Ontario.—Although gold was first discovered in 1866 in Hastings Co. and was later found and worked at many points from there to the lake of the Woods in the west, a distance of roughly 900 miles, no permanent gold-mining industry was established until 1911, when the Porcupine Camp was opened up. Soon afterwards the discovery of gold in the Kirkland Lake area, on what is now the Wright-Hargreaves Mine, led to the development of this second camp. The Lake Shore Mine in this camp has latterly had a larger production than that of any other Canadian gold mine. Active prospecting and development have been carried on during recent years in a number of Precambrian areas in Ontario. Properties brought into production include the Howey and Moss gold mines in the northwestern part of the province, the Ashley and Young-Davidson in Matachewan, and the Little Long

[1] In the Budget of Mar. 22, 1935, this form of tax was relinquished, and compensating arrangements were made in the income tax regulations providing for reduced depletion allowances to mines to offset anticipated loss in revenue.

Lac, St. Anthony, Casey Summit, Pickle Crow, J. M. Consolidated, Bidgood and Central Patricia in other areas. During 1934 the older gold mines of the Porcupine, Kirkland Lake and Michipicoten areas experienced a successful year with increased tonnages treated in all three camps. New gold discoveries in the Sturgeon River area resulted in a colorful "rush" of old-time proportions.

British Columbia.—The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river and in 1858 the famous Fraser River rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860 and three years later the area had a production of alluvial gold valued at $4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was prospected in 1892. Then the introduction of lode mining resulted in a rapidly increasing production until 1902, when previous records were surpassed by an output of more than 288,000 fine oz. Except for the maximum output of 297,459 fine oz. in 1913, the record of 1902 was not again equalled until 1934. Though the bulk of the gold obtained in the Cordilleran region has been derived from the placer deposits of the central portion of the region from Yukon at the north almost to the International Boundary at the south, yet a large amount, averaging 178,039 fine oz. between 1913 and 1921, was obtained by lode mining, largely of the copper-gold ores of the Rossland and Yale Boundary districts. The copper concentrates of the Britannia Mine also contain gold, as does the blister copper made at Anyox. The output of gold in British Columbia has been in part maintained by the successful operation of the Premier Mine on the Portland canal and recently by the mines of the Bridge River district, including the Pioneer, Bralorne and others from which production is expanding. Placer prospecting in British Columbia experienced a distinct revival during the 1932 and 1933 seasons and resulted in pronounced activity, especially in the Stikine, Liard, Cariboo and Atlin districts.

Yukon.—The discovery of gold in the Yukon River valley was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado. There is still a considerable production of gold from alluvial operations principally in the form of dredging.

Nova Scotia.—Gold was discovered in Nova Scotia in 1860. Two years after the discovery gold valued at nearly $142,000 was recovered from the quartz veins; an annual, though in recent years declining, output has been reported since that time. However, in 1933, gold mining activities were again more widespread with the industry showing signs of a general revival.

Quebec.—Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores of the Notre-Dame-des-Anges district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made at Rouyn, in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario. Smelting facilities became available for this region as the result of the opening of the Noranda smelter in December, 1927. The opera-

tion of this smelter, together with the development of gold properties in the northwestern part of the province, has established Quebec as the second largest gold-producing province. The established producing mines, including Siscoe, Granada and Bussières, had their mills in continuous operation throughout the past year. During 1933 and 1934 extensive developments of new gold properties in the Rouyn district resulted in the commencement of milling at the Beattie, Cadillac-O'Brien, McWatters, Thompson-Cadillac, Sullivan Consolidated and Green-Stabell gold mines. Several prospects situated in Pascalis, Louvicourt, Senneville and Bourlamaque townships were active and reported encouraging results. The copper-gold mining and smelting operations of Noranda Mines were continuous and the Company commenced construction of a 500-ton cyanide plant.

Manitoba.—The presence of gold-bearing ores in Manitoba has been known for a decade or more and the gold production of this province is now mounting. The Central Manitoba, an auriferous-quartz property in the Beresford Lake area east of lake Winnipeg, has produced gold steadily for several years and the San Antonio in the Rice Lake field has had a mill operating since May, 1932. Milling operations were resumed in 1934 by Diana gold mines and important development work was carried out at the Gunnar, Forty-four, God's Lake, Smelter, Gabrielle, Hanson Manitoba, Island Lake, Wylie Dominion and Wallace Lake gold mines. The major part of the gold of the province, however, continues to be produced as a by-product from the Flin Flon smelter which treats copper-zinc ores.

[1]Preliminary figures.

World Production.—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period, extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851 respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia and Russia.

In the fourth period, extending from 1891 to the present time, the outstanding features were the entry of South Africa as an important and later as the leading producer, and the phenomenal increase in the output of most of the gold-producing countries through the introduction of the cyanide process. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 23,010,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum

production of 15,576,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occured in 1921 and 1922 again reduced the costs of gold production and the industry responded with an increase to 17,978,000 fine oz. in 1923, to 19,339,000 in 1928, to 22,330,000 in 1931, to 24,151,000 in 1932 exceeding the former maximum of 1915 and to 24,962,000 in 1933. The annual world production for this period is shown in Table **10.**

In 1933 the world's chief producers were the Union of South Africa, with a production of 11,013,713 fine oz. or 44·1 p.c., Canada, producing 2,949,309 fine oz. or 11·8 p.c.*, and the United States, producing 2,276,711 fine oz. or 9·1 p.c. As Australia, Rhodesia and British India were also important producers, about 66·6 p.c. of the world production of 1933 was produced in the British Empire. In 1930 the gold production of Canada first exceeded that of the United States and from then to 1933, Canada has definitely ranked second among the world's producers.

Detailed statistics of world gold production for 1932 and 1933 follow.

*This percentage, derived from world production as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute as given on p. 374.

[1] Average price per fine ounce in New York. [2] Estimate, based on United States imports of ore and bullion and interrogator y data. [3] Estimates, based on productions of earlier years. [4] Previous years figur es. [5] Total s include other countries with minor productions which are not shown.

Subsection 2.—Silver.

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of $4,800,000, were produced in the Port Arthur district in Ontario. From 1887 to 1893 the annual production ranged in value between $300,000 and $400,000, and was derived chiefly from Ontario and Quebec. The next three years saw a rapid increase in production, due to the development of the silver-lead deposits of British Columbia, and in 1896 a production worth over $2,000,000 was recorded. From 1896 to 1905 annual production varied in value between $2,000,000 and $3,500,000, rising rapidly during the next five years to 32,869,264 fine oz. valued at $17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district. Since then there has been a falling-off in quantity, but owing to the higher price of the metal the value of the annual production increased to a maximum of $20,693,704 in 1918. The post-war depression and the decline in the value of silver caused a low value of production in 1921, but the industry recovered, and in 1930 production amounted to 26,443,823 fine oz. Partly owing to the further decline in the price of silver since that time production has decreased, amounting to only 15,187,950 fine oz. in 1933.

The silver production of Canada is chiefly credited to the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in combination with the gold ores of northern Ontario, the nickel ores of the Sudbury district and the copper-gold ores of Quebec, Manitoba and British Columbia. Thus most Canadian silver is produced in combination with other metals.

During 1931 much interest was created by the discovery at Echo bay, Great Bear lake, of mineral deposits in which high-grade native silver was associated with cobalt and radium-bearing ores. The first commercial production from this area occurred in 1932 when shipments were made to the Trail smelter in British Columbia. Production from this new camp was continued in 1933 and 1934.

Ontario.—The production of silver in Ontario in 1933 was 4,535,680 fine oz., the greater part of which was derived from the rich silver-bearing ores of the Cobalt district. Considerable quantities were also obtained from the products of the nickel refineries and from crude gold bullion. The Cobalt deposit was discovered in 1903, when the Temiskaming and Northern Ontario Railway was being built from North Bay to the head of lake Timiskaming. Later somewhat similar deposits were discovered at Gowganda, 55 miles northwest, and at South Lorrain, 18 miles southeast of Cobalt. Owing to the depletion of the ore bodies combined with the very low price of silver, operations have been much curtailed in the Cobalt, Gowganda and South Lorrain camps.

British Columbia.—In 1926, for the first time since 1905, this province surpassed Ontario in silver production. Quantity of production in 1930 was the greatest on record and amounted to 11,825,930 fine oz., although this record was nearly equalled in 1927 with a production of 11,040,445 fine oz. Production since 1930 has steadily declined to 6,737,057 fine oz. in 1933. Small amounts are recovered from alluvial gold and crude gold bullion, but the Sullivan and Premier mines have been responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver was also recovered from the copper ores and concentrates which were exported for treatment in foreign smelters and from blister copper made at the Anyox smelter.

Yukon.—The production of silver in recent years from Yukon has been derived chiefly from the silver-lead ores exported from the Mayo district. The Treadwell-Yukon Co. ceased mining at Keno Hill in the autumn of 1932 and transferred its operations to the Elsa claim on Galena Hill. High-grade ore was mined and shipped from this mine in 1933 after which the camp was abandoned and operations concentrated on the old Silver King mine.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table **12**, while statistics of the quantities and values produced in the various provinces are given for 1911 and subsequent years in Table **13**.

12.—Quantities and Values of Silver Produced in Canada during the calendar years 1911-34.

NOTE.—For figures for the years 1887-1910, see p. 361, 1933 Year Book.

[1]Preliminary figures.

World Production of Silver.—The world production of silver was estimated by the Director of the United States Mint, as shown in Table **11** of this chapter, at 160,986,798 fine oz. for 1933, a decrease of 2·4 p.c. from 1932 and of 38 p.c. from 1929, when world production reached a record maximum of 260,970,029 fine oz. The silver production of Canada in 1933 was 15,187,950 fine oz., or about 9·4* p.c. of the estimated world total for that year. This placed Canada third, next to Mexico and the United States.

14.—Quantities and Values of World Production of Silver, with Annual Average Prices, 1860-1933.

(From the Annual Report of the Director of the United States Mint.)

[1]At the average par price of a fine ounce of silver in London, excepting the years 1918 to 1922, inclusive, and 1931-33, for which the mean of the New York bid and asked prices was used.

In the preceding historical Table **14** the world production, value and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base—that is, a standard money—in parts of the western world and the price remained fairly stable at about $1.32 to $1.35 per fine oz. (about 15½ oz. silver = 1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production continued to increase and by 1889 had nearly doubled again, although the price had declined to 94 cts. In spite of a further increase in production in 1890, the price in that year rose to $1.05

*This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 374 based on the world estimate of the Imperial Institute.

per fine oz. During the next six years from 1891 to 1897, while annual world production increased only 17 p.c., the price declined nearly 40 p.c. During this same period, world gold production nearly doubled (see Table **10**). From 1898 to 1904 annual production remained fairly stationary, while the price fluctuated around 60 cts. From 1905 to 1912 there was a further rise in annual production of about 35 p.c., but the price, while fluctuating between 68 and 52 cts. per fine oz., was practically the same in 1912 as in 1905. During the economic disturbances of the war period, world production was on a lower level, while the price rose to a peak of $1.12 in 1919 but dropped to 63 cts. in 1921. From then until 1929, world production increased again by 50 p.c. and the price, after a rise to 74 cts. in 1924, declined steadily to 54 cts. On account of the world depression since 1929, production declined, while the price dropped to little more than half the lowest price recorded in any other period shown in the table. The fact that silver is to a great extent a by-product was responsible to some extent for its low price. The year 1934 was a notable one in the history of silver because of the legislation enacted by the United States' Congress and the decision reached at the London Monetary and Economic Conference of 1933. In the United States the Silver Purchase Act became law on June 19, changing the monetary reserve structure of that country, while in Canada the first step towards implementing the London agreement was taken when the Minister of Finance called for tenders as of Aug. 20, for delivery of silver bullion up to the amount of 250,000 ounces.

Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. By 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and by 1930 had risen to a new peak of 303,478,356 lb. In the two following years, as a result of the world-wide depression with very low prices prevailing for copper, production declined to 247,679,070 lb. in 1932. In 1933 the output again increased to 299,982,448 lb., while for 1934 it was estimated at 364,890,860 lb. This encouraging recovery in copper production not only reflects the stability of the copper-mining industry but emphasises the firmly entrenched position established by the Canadian metal in the copper-consuming countries of the world. Some Canadian copper producers, located principally in Manitoba, Ontario and Quebec, are fortunate in possessing ores containing sufficiently high values in precious metals to permit of operation in spite of the abnormally low copper prices prevailing almost continuously since 1930. However, the unfavourable copper market existing during recent years has not encouraged production and has curtailed the search for and development of new copper properties. In June of 1932 the United States instituted a duty of 4 cents per pound on foreign copper, which adversely affected Canadian copper production, more especially that of British Columbia. On the other hand, Canadian copper enjoys a preference in the United Kingdom and a large part of Canadian production now goes there.

Quebec.—Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. There is still an annual production from this field. Recent developments in the Rouyn camp of northwestern Quebec have resulted in a greatly increased production of copper since 1927. These deposits are

associated with an easterly extension of formations similar to those of the Kirkland Lake area in Ontario. The first discoveries were located as gold prospects; the existence of large bodies of copper and zinc ores was subsequently proved and there is now a large production of copper as well as of gold. Since 1931 the Canadian Copper Refineries, Ltd., have treated blister copper in their electrolytic refinery located at Montreal East. This material comes from the Noranda smelter and the smelter at Flin Flon, Manitoba. Gold, silver, selenium and tellurium are also products of the Montreal refinery.

Ontario.—The Sudbury deposits were first noted in 1856 but did not attract attention until 1883-84, during the construction of the C.P.R., when a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores known. These nickel-copper ores of the Sudbury area are the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been carried out. A subsidiary company, the Ontario Refining Co., Ltd., operates a copper refinery at Copper Cliff where electrolytically refined copper, precious metals, selenium and tellurium are produced from the blister copper smelted by the International Nickel Co., chiefly from ores from their own mines in the district. The company also operates the Acton precious metals refinery situated near London, England, where it recovers, in a refined state, the gold, silver and platinum metals contained in the concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining. Adverse industrial conditions led to reductions in the copper production of Ontario in 1931 and 1932. There was, however, a remarkable recovery in production during 1933 and a continued expansion in 1934.

Manitoba.—During the four years 1917-20, when high prices prevailed for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine. Much development has been carried on in the Flin Flon district of Manitoba in the last ten years, and large bodies of ore have been proven on the Flin Flon property of the Hudson Bay Mining and Smelting Co. and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay Railway provide these properties with transportation facilities. A copper smelter and electrolytic zinc plant are operated by the Hudson Bay Mining and Smelting Co. at Flin Flon, while a large hydraulic development on the Churchill river provides the necessary power. Production from the plants of this company has been continuous since 1930.

British Columbia.—Until 1930, British Columbia had been the leading copper producer among the provinces for many years, but it then gave first place to Ontario and since 1930 production has steadily declined, largely owing to the closing of the Copper Mountain mine and the curtailed operations at Britannia as a result of the low price of copper. The production of the province since 1930 has consisted of the blister copper produced at Anyox by the Granby Consolidated Mining, Smelting and Power Co., Ltd., and the copper estimated as recoverable from the ores, matte and concentrates exported. The principal copper-producing mines in British Columbia at present are the Britannia mine on Howe sound, and the Hidden Creek and Bonanza mines on Portland canal. The Hidden Creek and Bonanza ores are smelted at the Anyox smelter.

15.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-34.

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

[1]Preliminary figures.

World Production of Copper.—World production of copper was estimated at 1,120,000 short tons in 1933, as compared with 2,150,400 tons in 1929, the record year. Canada had an output of 149,992 tons in 1933, producing about 13·4 p.c. of the world estimated total and standing third among the nations.

[1] From the Imperial Institute except in the case of the production for Canada, where the official figures of the Dominion Bureau of Statistics are used.

Subsection 4.—Lead.

Lead is obtained in Canada largely from the deposits of British Columbia. From 88,665 lb. in 1891 the production advanced to over 39,000,000 lb. in 1897. Owing to the low price of silver in 1898 and labour troubles in the Slocan in 1899, the output in the latter year fell to 21,900,000 lb., but rose to 63,200,000 lb. in 1900. The output fell to 18,100,000 lb. in 1903, owing to the condition of the market affecting the production of the low-grade silver-lead ores of the East Kootenay district. An Act of October, 1903, provided for the payment of bounties on lead contained in lead-bearing ores mined in Canada and, as a direct result of the bounty, the output increased to 56,900,000 lb. in 1905 but fell off gradually to 23,800,000 lb. in 1911. A marked increase has since been experienced, a record total of 337,946,688 lb. being reached in 1928, while production in 1929 and 1930 continued at nearly the same level. Owing to the very low price to which the metal declined, production fell off to 255,947,378 lb. in 1932 and 266,475,191 lb. in 1933. The official estimate of production in 1934 was 342,811,000 lb., a new high record.

British Columbia.—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing since 1930 for lead, zinc, and silver, many of the small silver-lead mines of the Slocan have remained idle, while the Monarch mine at Field re-opened in 1934 after having been closed down for some time.

Other Provinces.—Occurrences of lead have been found in Gaspé peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf Co., where the Tetrault mine was a consistent producer of lead and zinc concentrates until 1930, when operations were suspended owing to the low prices of these metals. Lead mining in Ontario has been intimately associated with the successful operations of the Galetta mine and smelter, which closed down in the summer of 1931 owing to the low price of lead. Recent discoveries in the Sudbury Basin area have disclosed bodies of lead-zinc ore. These properties were under development but operations have been suspended and very little production has come from them as yet. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon. These operations are described under "silver" on pp. 401-402 of this chapter.

17.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-34.

NOTE.—For figures for the years 1887-1910, see 1929 Year Book, p. 367.

[1] Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1912 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported. [2]From 1911 to 1925, average prices at Montreal; from 1926 to 1934, average yearly prices at London, Eng. [3]Preliminary figures.

World Production.—The world production of lead in 1933 was about 1,310,400* short tons. The principal producers were the United States with 20·9 p.c., Mexico 10·0 p.c., Australia 19·0 p.c., Canada 10·2 p.c., Germany 7·0 p.c. and Spain 4·9 p.c.

Subsection 5.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district, the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry will be found under copper in Subsection 3 of this section. From 830,477 lb. in 1889, the production of nickel increased continually to a war-time peak of 92,507,293 lb. in 1918. After a slump to 19,293,060 lb. and 17,597,123 lb. in 1921 and 1922 respectively there was an increase to 73,857,114 lb. in 1925. In 1928 production at 96,755,578 lb. exceeded that of the war year 1918, while 1929 established a record at 110,275,912 lb. Production later declined to 30,327,968 lb. in 1932, but an output of 83,264,658 lb. in 1933 represents a remarkable recovery. Estimated production in 1934 was 130,346,400 lb., the highest on record.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending their efforts in that direction accounted very largely for the marked increase in production during the nineteen-twenties. The automobile industry, electrical machinery, cooking utensils, new submarine cables and various nickel alloys all helped to absorb this increased production. The world-wide depression seriously affected the demand for a commodity so dependent upon the world's industrial markets, while the increased nickel production of 1933 and 1934 reflects the recent improvement in industrial activity throughout the world.

* From the Imperial Institute's Statistical Summary.

Sudbury.—The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ore mined in the district contains nickel, copper and iron, but cobalt, gold, silver, selenium, tellurium, platinum and palladium are nearly always present in relatively small quantities. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

World Production.—The world production of nickel was about 50,736 short tons in 1933, of which output about 82 p.c.* was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

18.—Quantities and Values[1] of Nickel Produced in Canada during the calendar years 1911-34.

NOTE.—For figures for the years 1889–1910, see 1929 Year Book, p. 368.

[1] A change in the method of computing the value of nickel production accounts for the drop in value after 1923. [2] Preliminary figures.

Subsection 6.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades derived from the silver-cobalt-nickel arsenides of the Cobalt district, the cobalt produced by refineries in southern Ontario having practically controlled world production until recent years. Large deposits of cobalt-bearing ores occur in central Africa, and the introduction into the world's markets of cobalt from this source has limited the market for the Canadian product to such an extent that since 1926 Canadian production has dropped to less than half of the world production. The ores occurring in recent discoveries at Great Bear lake, N.W.T., contain cobalt associated with pitchblende and silver.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. The smelter output of cobalt, computed as the metallic cobalt and cobalt in oxides together with the cobalt recovered in ores exported from the mines and including cobalt in residues exported, amounted in 1933 to 466,702 lb. valued at $597,752, as against 1,116,492 lb. valued at $2,328,517 in 1925. Production in 1934 is estimated at 588,566 lb. valued at $589,933.

* From the Imperial Institute's Statistical Summary.

Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flin Flon copper-zinc ores in Manitoba. The metallic recoveries from Canadian ores were 267,643,505 lb. in 1930, as compared with 5,600,000 lb. in 1913. Production in 1933 amounted to 199,131,984 lb. while the output in 1934 was estimated at 298,579,581 lb.

British Columbia.—The principal zinc-mining regions are situated in the Kootenay district of British Columbia, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where the ore worked is a replacement deposit of considerable size. Other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. Further information regarding lead-zinc mining and metallurgical operations is given under "lead" in Subsection 4 of this section.

Other Provinces.—There has been considerable exploration and development of zinc-bearing deposits during recent years in Eastern Canada, where these ores are often characterized by the close association of copper, zinc and gold. In north-western Manitoba the Flin Flon and Sherritt-Gordon mines have ores of this nature and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. Some important deposits of zinc-bearing ore have been developed in the Rouyn district of Quebec. Zinc is associated with lead in the deposits at Galetta, Ontario, and at Notre-Dame-des-Anges, Quebec, and mines in both these districts have been producers of zinc concentrates, while the Errington mine in the Sudbury district developed a lead-zinc deposit and made some small shipments of zinc concentrates. Zinc concentrates have also been produced at the Sterling mine in Nova Scotia. However, all lead-zinc properties to the east of Manitoba have remained inactive since 1930.

[1] Estimated foreign smelter recoveries and refined zinc made in Canada. [2] Preliminary figures.

Subsection 8.—Iron.*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time. In Quebec there is a small annual production of titaniferous iron ore from a deposit near Baie St. Paul, but this material, which is principally exported, is used for its titanium content and not as a source of iron. There are millions of tons of iron magnetite sands, containing a high percentage of iron, along the north shore of the St. Lawrence in Saguenay Co., but these sands contain a high percentage of titanium, rendering the briquetted ore unfavourable for blast-furnace treatment, so that efforts to utilize them have not proved successful. There are also a number of deposits of bog iron ore in the St. Lawrence valley remarkably free from sulphur and phosphorus. These bog iron ores were successfully used in charcoal blast furnaces at Radnor Forges and Drummondville for many years. The known deposits of non-Bessemer iron ore in northern Ontario are very extensive. Millions of tons of red hæmatite were taken from the Helen mine in the Michipicoten district, while the Magpie mine in the same district produced siderite which was roasted before being shipped to the blast furnaces at Sault Ste. Marie. In British Columbia, some development work has been done on iron deposits on Kamloops lake and on Texada island, but no iron-mining or iron-smelting industry has become established in that province. Extensive deposits of hæmatite exist on the Belcher islands in Hudson bay, but the ore is rather low in grade and its comparative inaccessibility renders its development impracticable. Immense deposits of iron ores, large masses being high-grade, have been reported along the course of the Koksoak river, in northern Quebec, but these are so inaccessible that up to the present they have not even been systematically explored.

Hitherto there has been no great incentive to the development of the iron-mining industry in Canada, since there are easily accessible and abundant supplies in the higher-grade ores of Wabana, Newfoundland, and of the Mesabi range in Minnesota. The Wabana section of Newfoundland contains one of the largest deposits of iron ore in the world, the probable reserves in that area being estimated at 3,635,000,000 tons, and consisting of an exceptionally high-grade hæmatite.

In Ontario, where the iron and steel industry has reached its largest development in Canada, cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal fields of Pennsylvania.

From Table **20** it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded only in the war years 1917 and 1918. Production has fallen off considerably since 1929 as a result of the reaction which set in during the latter part of that year. Ontario has been the leading producer of pig iron throughout the years recorded.

* A sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

[1] Including a small production from Quebec in certain years. [2] Owing to the fact that much of the pig iron produced in Canada is used by the firms producing it for further manufacture in their own plants, no attempt has been made since 1926 to place a nominal value on such production. [3] Preliminary figures.

Section 5.—Production of Non-Metallic Minerals.

Subsection 1.—Fuels.

Coal.

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while Ontario and Quebec are more easily and economically supplied with coal from the nearer coal fields of Pennsylvania and Ohio.* The anomaly of the situation is accentuated if we consider that Canada's present coal consumption is about 35,000,000 tons annually, as against reserves of 1,234,289,000,000 metric tons, sufficient for an unthinkably long period at the present rate of consumption.

The Dominion Fuel Board, with the Deputy Minister of the Department of Mines as chairman, was constituted in 1922 to meet the need for a standing organization definitely responsible for the systematic study of the fuel position of the Dominion.

* See map showing the sources of the coal supply of different parts of Canada, p. 386 of 1922-23 Year Book.

Coal Resources.—A summary of the known coal resources of Canada was given on pp. 391-394 of the 1922-23 Year Book; the accompanying table is reproduced as Table **21.**

21.—Coal Resources of Canada, by Provinces and Classes of Coal.[1]

(In metric tons of 2,204 pounds.)

Province or District.	Including Seams of 1 foot or over at Depths to 4,000 feet.					Including Seams of 2 feet and over, at Depths between 4,000 and 6,000 feet.

[1] See "Coal, Coke and By-Products", published by the Imperial Mineral Resources Bureau.

[2] The coal of all classes mined in Alberta to 1911, amounting to 20,000,000 tons, has been deducted.

[3] A=Anthracite, B=Bituminous, L=Lignite.

[4] Extensive investigation has been carried on by the Ontario authorities in connection with the Onakawana lignite deposits of the Moose River basin, James Bay region. No commercial production from this field has been reported up to 1935.

The coal production in 1933 amounted to 11,903,344 short tons, valued at $35,923,962, or an average of $3·02 per ton. This represented a decrease of 5,660,949 tons, or 32 p.c., as compared with 1928, the record year. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1932 and 1933 production among these classes is given in Table **26.** The quantity of coal mined annually in six provinces, and the Yukon Territory, and totals for Canada from 1911 to 1934 is shown in Table **22.**

22.—Production of Coal in Canada, by Provinces, calendar years 1911-34.

NOTE.—For annual production from 1874 to 1910, by provinces, see 1911 Year Book, p. 419.

Coal Consumption.—The sources of the coal consumed in Canada in the calendar years 1911-33 are shown in Table **25,** detailed figures of coal *made available for consumption* during 1932 and 1933 are given in Table **26;** the difference between the totals of the two tables in the same years is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

25.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-33.

NOTE.—For the years 1886 to 1910, see 1921 Year Book, p. 354.

[1] The sum of Canadian coal mines sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

[2] Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

26.—Coal Output, Exports, Receipts from Other Countries and Coal Made Available for Consumption in Canada during 1932 and 1933.

(short tons).

NOTE.—For details by provinces, see the Bureau's annual report "Coal Statistics for Canada".

[1] Includes 52,189 tons from Germany, 700 tons from French East Indies and 650 tons from Belgium in 1932, and 144 tons of bituminous from Germany in 1933.

World Production.—The total known coal production of the world in 1933 amounted to about 1,140,000,000 long tons, towards which Canada contributed 10,611,000 long tons or about 0·9 p.c. Table 27 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-33.

27.—Coal Produced in the Principal Countries of the World, 1913, 1921-33.

(000 long tons.)

NOTE.—For corresponding figures for 1914 to 1926, see 1932 Year Book, p. 281. Figures in this table were taken from the Imperial Institute's Statistical Summary.

Natural Gas and Petroleum.

Natural Gas.—The production of natural gas increased in value from $1,346,471 in 1910 to $10,289,985 in 1930 but has since declined to a value of $8,712,234 in 1933 and $8,419,073 in 1934. The producing wells in the east are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost (about 6 miles south and east of the town of Foremost), Bow Island and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. The quantity of gas sold or used in 1933 was 23,138,103 M cubic feet. Ontario was credited with about 52 p.c. of the total value but only 31 p.c. of the total quantity, while Alberta produced 45 p.c. by value and 66 p.c. of the total quantity. The production by provinces since 1920 is given in Table 28.

28.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-34.

[1] Totals for Canada include small productions in Manitoba and Saskatchewan. [2]Preliminary figures.

Petroleum.—The production of crude petroleum in Canada during 1931 was the greatest on record and amounted to 1,542,573 barrels. Output, however, declined to 1,044,412 barrels in 1932, rising again to 1,145,333 barrels in 1933. Production during 1934 was estimated as 1,417,368 barrels. The Turner Valley field in Alberta is the principal source of production in Canada. The wells in this field give a wet gas from which a very high grade of crude naphtha is separated. The Red Coulée field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton, where the oil is heavy and of a lower grade. Production from wells near Fort Norman on the lower Mackenzie river increased from 910 barrels in 1932 to 4,438 barrels in 1934. This oil was treated locally in a small refining plant and was used to a large extent in connection with mining operations in the Great Bear Lake area.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. These fields reached their maximum production in the '90's and have since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1932 and 1933 see Tables **5** and **5A** of this chapter.

29.—Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-34.

NOTE.—For figures for the years 1886-1910, inclusive, see p. 377 of the 1933 Year Book.

Subsection 2.—Other Non-Metallic Minerals.

Asbestos.—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than $25,000 in 1880 to $14,792,201 in 1920 and $13,172,581 in 1929. Owing to trade depression, production has been curtailed since 1929 as will be seen in Table **30.** However, in 1933 and 1934, production showed a distinct improvement over the immediately preceding years. The Imperial Institute has not given an estimate for the world total of asbestos production since 1931 owing to the lack of statistics for Russia, the world's second largest producer. In 1931 Russian production was estimated at 63,653 long tons and it has probably increased slightly since then. In 1933 Canada produced about 141,400 long tons, or more than half the world total, while other leading countries with their production in long tons were: Southern Rhodesia, 26,948; Union of South Africa, 15,185; United States, 4,237; and Cyprus, 3,494.

Quebec.—The Eastern Townships has for many years been the most productive asbestos-mining area in the world. The most important deposits are at Black lake, in Coleraine township; at Thetford and Robertsonville, in Thetford

township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos traverse the serpentine in all directions, and as a rule the fibre lies at right angles to the walls of the veins. The veins vary in width from $\frac{1}{4}$ inch to $\frac{1}{2}$ inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning.

Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. In addition, 10 plants in Canada manufacture asbestos products, including the following commodities; asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil and hydraulic operations.

30.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-34.

NOTE.—Figures for the years 1896-1910 are given in the 1911 Year Book, p. 424.

Year.	Quantity.[1]	Value.[1]	Year.	Quantity.[1]	Value.[1]
	tons.	$		tons.	$
1911	127,414	2,943,108	1923	231,482	7,522,506
1912	136,301	3,137,279	1924	225,744	6,710,830

1922	163,706	5,552,723	1934[2]	155,980	4,936,326

[1] The quantities and values of sand, gravel and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years. [2] Preliminary figures.

Gypsum.—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness and Victoria counties, Nova Scotia; Hillsborough, New Brunswick; Paris, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland and Mayook, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Nearly 50 p.c. of Canada's production is exported in crude forms from the Nova Scotia deposits, which are conveniently situated for ocean shipping and account for about 75 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at $3,743,648. Production during 1933 was 382,736 tons valued at $675,822 and preliminary figures for 1934 are 461,194 tons valued at $864,204. The production by provinces during 1933 is shown in Table **5A**, p. 386.

Salt.—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia show an increasing production in recent years and some shipments have been made from deposits near McMurray in Alberta. The first production of commercial importance in Manitoba was recorded in 1932 and for Saskatchewan in 1933.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a high record of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 280,115 tons valued at $1,939,874 in 1933 (see Tables **2** and **5A** of this chapter). The estimate for 1934 was 321,753 tons.

Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances the production of clay products, cement, gravel and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was evident into 1933. It is encouraging to observe, however, that with a moderate recovery of construction activities in 1934 there was an increase in the estimated production of the chief structural materials, the total estimated value of production being $19,233,092 as compared with $16,696,687 in 1933.

Brick and Tile.—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age occurring over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table **31,** the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1932 and 1933 is shown in Table **2** of this chapter, while the production by provinces in 1932 and 1933 is given in Tables **5** and **5A.** Estimated production in 1934 is given in Table **2A.**

Cement.—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica and alumina. The lime is usually furnished by limestone or marl, and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta and British Columbia. As may be seen from Table **31,** production declined greatly from 1929 to 1933, but recovered somewhat in 1934. Production by provinces in 1932 and 1933 is given in Tables **5** and **5A** of this chapter. Whereas in pre-war years Canada was an importer of Portland cement she is now on balance an exporter of this commodity.

[1]The barrel of cement=350 lb. or 3½ cwt. [2]"Production" as used here means quantity and value of sales. [3]Quantities of exports were insignificant prior to 1919. [4]Preliminary figures.

Stone, Sand and Gravel.—While the Mineral Branch of the Dominion Bureau of Statistics presents details of the production and industrial organization of the stone industry separately from that of sand and gravel, for the sake of brevity they are here discussed together. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased in 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply as shown by the figures in Table **32.** Estimates for 1934 indicate some recovery to 3,661,800 tons for total stone and 13,521,257 tons for sand and gravel. Among the developments in Canada which have resulted in the increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 420 by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway road-beds.

The provincial distribution of the 1932 and 1933 production of stone, sand and gravel is shown in Tables **5** and **5A,** while the chief purposes for which these materials were produced are shown in Table **32.**

32.—Production of Sand, Gravel and Stone in Canada, Showing the Principal Purposes, calendar years 1931-33.

Totals, Stone[1]	**8,397,860**	**11,070,184**	**4,690,922**	**4,938,461**	**2,939,574**	**2,996,576**

[1]Totals include minor items not specified.

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish or finish it; although, dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total stone produced in 1933 over 87 p.c. was limestone, 9 p.c. granite, 3 p.c. sandstone and less than 0·4 p.c. marble. The average value per ton was $0·83 for limestone, $2.65 for granite, $1.09 for sandstone and $6.05 for marble. The marble was used chiefly for stucco dash, in pulp and paper mills and as dressed building stone. Of the other three kinds of stone by far the largest part was used as crushed stone.

CHAPTER XIII.—WATER POWERS.

The fresh-water area of Canada is officially estimated at 228,070 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the fresh-water area of any other country in the world. As many parts of this well-watered country are situated at a considerable height above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the water from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This Water Power chapter of the Year Book is divided into three sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

Section 1.—The Water Powers of Canada.*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic commodity. Statistics concern themselves with kilowatt hours of electrical energy produced just as with the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is of such vital consequence that every nation, besides considering its own power-producing resources, is deeply interested in the similar resources of other countries and the method of their development. To facilitate a study of world power conditions two Plenary World Power Conferences composed of representatives from 47 member states have already been held to consider the technical, economic and statistical aspects of power development. Arrangements for the future re-convening of such conferences have been made.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the total main plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Jan. 1, 1935.

The figures of available power in the above table are based upon rapids, falls and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six months flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only about 17 p.c. of the present recorded water-power resources.

The above figures may be said to represent the minimum water-power possibilities of the Dominion. To illustrate, detailed analyses of the water-power resources of the provinces of New Brunswick and Nova Scotia have disclosed advantageous reservoir facilities for regulating stream flow. It is estimated that the two provinces possess within their respective borders 200,000 and 300,000 commercial horse power.

Growth of Water-Power Development.—The commencement of the long distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1934 is shown, by provinces, in Table 2.

2.—Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900-34.

NOTE.—Turbine horse power in Yukon was 5 from 1900 to 1905, 2,085 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,195 from 1911 to 1913, and 13,199 from 1914 to 1934. These figures are included in the totals for Canada.

Distribution of Developed Water Power.—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper-mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures of Table 3, which indicate that 8·2 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4·8 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 90 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to the various industrial plants.

3.—Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Jan. 1, 1935.

NOTE.—The figures in this table are preliminary and are subject to correction when official data are complete.

[1] Includes only hydro-electric stations which develop power for sale. [2] Includes only water power *actually developed* by pulp and paper companies. In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,031,000 h.p., making a total of more than 1,636,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers. [3] Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations. [4] Estimated by the Dominion Bureau of Statistics.

Section 2.—Central Electric Stations.*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electric appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horsepower, kilowatt hours generated and number of customers for the 17 years ended 1933, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1933 amounted to 17,338,990,000 kilowatt hours and, based on preliminary figures from the large stations, the total production in 1934 is estimated at 21,167,682,000 kilowatt hours. This is a new high record for the industry, exceeding the previous peak of 18,093,802,000 kilowatt hours made in 1930 by over 16 p.c.

Exports to the United States, which reached a low point in 1932, began to pick up in June, 1933, and continued well above 1931 and 1932 exports throughout 1934, amounting to 1,138,297,000 kilowatt hours for the first eleven months, as against 626,278,000 kilowatt hours for the corresponding period in 1932.

Pulp and paper mills, textile mills and other industries have been using increasing quantities of electricity in electric boilers and for the first eleven months of 1934 purchased 4,560,000,000 kilowatt hours for this purpose. This was an increase of 79 p.c. over the 1932 deliveries and 42 p.c. over the 1933 deliveries. The improved conditions in the pulp and paper industry, together with increases in power consumption in electro-chemical and electro-metallurgical industries and a more or less

* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch see Chapter XXIX.

steady increase in the domestic load, or consumption for residence lighting, and other uses, even during the worst years of the depression, have all combined to raise the central electric station output to this record figure.

There are some interesting factors affecting the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada more than in the United States. Again, the pulp and paper industry is proportionately a smaller industry in the United States than in Canada; on a power basis, the proportions are approximately 7 p.c. and 40 p.c. respectively. While the average consumption for domestic use is more than twice as high in Canada as in the United States, the total consumption for domestic or residential use is about 9·5 p.c. of the total output of central electric stations for Canada and 14 p.c for the United States.

4.—Summary Statistics of Central Electric Stations, calendar years 1917-33.

[1] Excluding non-generating stations in 1920 and subsequent years. [2] Revised to exclude duplications.
[3] Not including auxiliary plant equipment which is included in installation shown in central electric stations in Table 7 of the manufactures chapter, pp. 466 and 467.

Equipment of Central Electric Stations.—The main-plant primary power equipment of all central electric stations aggregated 6,616,006 h.p. in 1933. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 95 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 5 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 193,569 h.p., or 2·8 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 57 main-plant steam reciprocating engines in central electric stations in 1933, only 8 in number, or about 14 p.c., were over 500 h.p. The steam turbines averaged approximately 4,100 h.p. with 15 units averaging 9,600 h.p., but there were only 66 steam turbines in the industry and these were confined to 25 stations, whereas the 814 water wheels and turbines averaged 7,747 h.p., including 3 at 65,000 h.p. and 2 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces bituminous and lignite coals are used for the steam engines, and gasolene, oil distillates and producer gas for the internal combustion engines.

Of the 334 main-plant internal combustion engines in central electric stations in 1933, 186, or 56 p.c., were in Saskatchewan, 66, or 20 p.c., in Alberta and 30, or 9 p.c., in Manitoba.

During 1933, the fuel stations produced 330,933,000 kilowatt hours at a cost for fuel of $1,783,301, an average of 0·54 cts. per kilowatt hour. This production was, however, only 1·8 p.c. of the total output. The auxiliary equipment in central stations consumed fuel valued at $88,127 and produced 1,677,000 k.w. hours of energy.

5.—Main Plant Equipment of Central Electric Stations, by Provinces and Total Auxiliary Equipment, 1933.

NOTE.—K.V.A. means Kilo-volt-amperes.

Provincial Distribution of Electrical Energy.—The distribution by provinces of the electrical energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1928-1933. In the latter year about 80 p.c. of the total generated electrical energy was produced in the leading industrial provinces of Ontario and Quebec. From Table 7 it is seen that the total electric energy generated for export in the fiscal year ended Mar. 31, 1934, was 1,199,027,447 kilowatt hours; in the calendar year 1933 it had amounted to 1,010,420,181 kilowatt hours, or 5·8 p.c. of the total amount generated in central electric stations.

6.—Electrical Energy Generated in Central Electric Stations, by Provinces, calendar years 1928-33.

Electric Light and Power.—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

Electrical energy produced for export increased from 538,331,425 kilowatt hours in the fiscal year ended Mar. 31, 1911, to 1,749,539,778 kilowatt hours in 1931 but fell to 652,152,826 kilowatt hours in 1933. Such power produced in 1934 showed an increase of nearly 84 p.c. compared with 1933 and was only 31·5 p.c. below the 1931 figure. Figures by companies for the last four fiscal years are given in Table 7.

Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a 'key industry' in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This 'public ownership' movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

Subsection 1.—The Hydro-Electric Power Commission of Ontario.*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electrical power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1933 electrical service was supplied by the Commission to about 757 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electrical energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service 'at cost'. The rates charged by the municipal utilities for retail service are under the control of the Commission and are designed to ensure that each class of consumer bears its appropriate share

* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

Power Supplies.—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 39 hydro-electric power plants operated by the Commission in 1932, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future had been made at the end of 1932—including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 2,000,000 h.p.

Hydro-Electric Power Commission Statistics.—The Canada Year Book of 1910 (p. xliii) described the turning on, Oct. 11, 1910, at Berlin (now Kitchener), Ontario, of electrical energy generated by Niagara falls. The small initial load of less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated nearly $395,000,000 in 1933.

8.—Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, 1910-33.

[1] Included in Eastern Ontario system. [2] Included in Northern Ontario system. [3] Includes Manitoulin rural power district.

Statistics of Urban Municipal Electric Utilities of Ontario Supplied by the Commission.—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table **14.**

Statistics of the assets and liabilities of the electric departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table **12.** These show, for 1933, total assets of $135,703,253, as compared with liabilities of $49,920,754. Of the difference, $44,169,720 is allotted as reserves, leaving a surplus of $41,612,779. The item "equities in hydro systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt to total assets the equity in Hydro systems is not taken into account. It will be noted that whereas between 1929 and 1933 total assets have increased by $28,794,107, total liabilities have increased by only $1,825,046.

In Table **13** will be found details of the earnings and expenses of the electrical distributing systems of the urban municipalities served by the Hydro-Electric Power Commission, for the five years from 1929 to 1933. The first item of expense—power purchased—is the municipalities' share of the Commission's costs for generation, purchase, and transmission of the power in bulk; all other expenses and earnings relate to local distribution within the municipalities. A very rapid growth will be noted.

13.—Statement of Earnings and Expenses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1929-33.

Item.	1929.	1930.	1931.	1932.	1933.
Numbers of municipalities included	259	267	275	280	282

Rural Electrical Service in Ontario.—During the past few years substantial progress has been made in Ontario in the field of rural electrification and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of "grants-in-aid", 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to $1,000 to actual owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table **14** will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A rapid rate of increase is obvious from these statistics.

14.—Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1929-33.

NOTE.—*Re* Rural Power District Legislation, consult the following Provincial Government publications: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act* (R.S.O., 1927, c. 59); *The Rural Power District Loans Act, 1930* (20 Geo. V, c. 14), and *The Rural District Service Charge Act, 1930* (20 Geo. V, c. 15).

Item.	1929.	1930.	1931.	1932.	1933.
Numbers of rural power districts	141	160	167	172	171
Numbers of townships served	266	297	338	358	365
Numbers of consumers	37,340	46,715	55,600	59,534	61,845
Miles of primary distribution lines	4,835	6,726	8,197	8,918	9,174
Horse-power supplied	21,138	26,782	31,790	32,853	32,372
Revenues from customers $	1,684,455	1,998,252	2,456,989	2,752,353	2,796,023
Total expenses $	1,495,928	1,864,823	2,354,792	2,776,192	2,904,612
Net surpluses $	188,527	133,428	102,197	−23,838	−108,589
Capital invested, totals $	9,324,514	12,665,249	15,507,583	16,964,227	17,693,875
Provincial grants-in-aid, totals[1] $	4,636,195	6,297,954	7,677,842	8,393,308	8,752,993

[1] Included in previous item, "capital invested."

Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.

Quebec.—The Quebec Streams Commission, originally created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46) and by 20 Geo. V, c. 34, is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet, on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beaupré and the North rivers. The entire cost to the Commission of these storage works has been about $9,000,000 and the annual revenue exceeds $750,000.

Other reservoirs which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission, namely:—

In the Gatineau River watershed two large storage reservoirs, Baskatong and Cabonga, were completed in 1927 and 1929, with a combined capacity of 140 billions of cubic feet, making it possible to increase the flow of the Gatineau river from 3,000 second-feet to 10,000 second-feet. This work was paid for by the Gatineau Power Co.

On the Lièvre river, a storage reservoir of 18 billions of cubic feet was completed in 1930 at Cedars Rapids, one mile and a half above Notre-Dame-du-Laus and will be operated to maintain a regulated flow of 3,500 second-feet at High Falls. The cost of this dam was paid by the James MacLaren Co., of Buckingham.

On Mattawin river, St. Maurice District, a storage reservoir of 33 billions of cubic feet was built in 1930 at Taureau rapid, 80 miles from the mouth of the river, with a view to a better and more complete regulation of the flow of the St. Maurice river. This work was paid for by the Shawinigan Water and Power Co.

Nova Scotia.—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply and utilize electric energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor". Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems: *St. Margaret's Bay*—sells power by wholesale in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., supplies demands of a groundwood pulp-mill at Sheet Harbour, retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys and serves the town of Truro through the Pictou County Power Board; *Mersey System*—supplies demands of pulp and paper-mill at Brooklyn, Queens Co.; *Markland System*—supplies town of Liverpool, Caledonia valley and places in vicinity, including woodworking factory and that of a gold mine; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power wholesale in Shelburne and wholesale and retail in the town of Lockeport and vicinity; *Antigonish System*—supplies Antigonish town, and other communities in Antigonish Co.

The total installed capacity at Sept. 30, 1933 was 62,955 h.p., and there were about 257 miles of main transmission lines and 161 miles of secondary transmission and distribution lines. The total capital expenditure to Sept. 30, 1933, was $13,902,-334 and the reserves were $1,391,775.

New Brunswick.—The New Brunswick Electric Power Commission, incorporated under provincial legislation, carries on the generation and distribution of electrical power in southern New Brunswick. It operates an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John, and a 7,500 h.p. steam plant at Grand Lake, in the Minto coal area; 66,000-volt lines connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville.

Power is sold *en bloc* to the cities of Saint John, Moncton and Fredericton and to the town of Sussex, supplying 17,400 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving directly 5,250 customers. 235 miles of high voltage lines and 695 miles of distributing lines are in operation.

The Commission has under construction a 66,000-volt line from the Grand Lake plant to the Miramichi and is taking over the distribution services of the towns of Chatham and Newcastle on Dec. 31, 1934.

The Commission has a plant investment of $6,285,000, and an annual revenue of $800,000.

Manitoba.—The formation of the Manitoba Power Commission was authorized by the passage of the Electrical Power Transmission Act of 1919 (c. 30, also c. 61, Consolidated Amendments, 1924) which authorizes the Commission to make provi-

sion for generating electrical energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations and individuals. In 1929 legislation was passed whereby the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electrical power or energy to municipalities, farms and other customers.

The Commission has built and is now operating an extensive transmission system under authority of the above Act, supplying electrical power to many thousands of customers throughout Manitoba. This power is purchased under the Seven Sisters power contract from the Northwestern Power Co. and transmitted over high tension steel-tower lines to Portage la Prairie, Brandon and Morden. From this main system power is transmitted to the territory south of the Winnipeg-Brandon main line as far as the International Boundary.

A branch system serving the territory along the western boundary of the province, including the towns and villages of Reston, Pipestone, Melita, Napinka, Elkhorn, Miniota, Crandall and Arrow River, has been constructed and is operated by the Commission. This system which, until August 1931, was supplied with power generated by the Commission's plant at Virden, is now tied into the main system and supplied with power generated at Seven Sisters.

Under the authority granted by the Electrical Power Transmission Act of 1919, the Commission has made purchases of municipally-owned plants—notably at Birtle and Brandon—or entered into contracts for the supply of power by municipally-owned plants—as at Dauphin—or by the Winnipeg Electric Co., whereby power is supplied to outlying districts. This phase of the Commission's activities has shown steady growth.

The Commission owns and operates the central steam-heating system at Brandon, supplying heat to the business and part of the residential section of the city. The Commission also owns and operates the gas plant supplying gas to commercial and residential customers. It is the intention of the Commission to supply all outlying power areas from the main system just as soon as their loads are sufficient to justify the cost of building extensions.

Saskatchewan.—The Saskatchewan Power Commission was established in1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell and supply electrical energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers *re* the operation of electric public utilities, and is charged with the responsibility for the administration of the Electrical Licensing Act (R.S.S., 1930, c. 214).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfros-Wadena and the Leader-Prelate-Sceptre systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, Maple Creek and

Lanigan were acquired, and in 1931 the generating plant at Willow Bunch was added. The Watrous-Nokomis system, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulyea system of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw and Tisdale, where the Commission has a generating plant, with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. There are now 1,357 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 123 towns and villages is approximately 7,574 and those indirectly served (where the cities operate the distribution systems) number 15,833. The total plant investment as at Dec. 31, 1933, was approximately $7,618,279.

British Columbia.—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electrical energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

CHAPTER XIV.—MANUFACTURES.*

Section 1.—The Evolution of Canadian Manufacturing Industries.

Early Manufactures.—The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, probably the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were also necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need for protection. At a census of occupations taken in 1681, we find enumerated a comparatively large number of tailors and shoemakers, masons and carpenters, gunsmiths and edge-tool makers.

The earlier manufactures were necessarily of a rather crude and primitive type, concerned with the production of commodities which were too bulky to bear the heavy transportation charges of those days, when only one round trip per year could be made between France and Quebec, and vessels were constantly subject to the storms of the North Atlantic and very frequently to the attacks of the English. Indeed, although the colonial policy of France under the old *régime* aimed at preventing the manufacture in Canada of any article which could be imported from the Mother Country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 years out of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. On the occasion of the English capture of a convoy in 1705, the colonists were driven to manufacture rough cloth out of whatever fibres they could obtain, such as the Canadian nettle and the inner bark of the basswood. Such events led to the introduction of sheep raising and the manufacturing of homespun woollens. From these humble beginnings arose the important textile industries of to-day which are able to produce the finest fabrics of cotton, wool or silk.

In the days when ships were built of wood Canada was advantageously situated with respect to their production. Pont-Gravé built two small vessels at Port Royal in 1606 and one at Tadoussac in 1608. Talon, in 1666, built on his private account a ship of 120 tons, and in 1672 a vessel of over 400 tons was on the stocks at Quebec. Ships were built for the French navy and for the West India trade. Under the British *régime* shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865, when 105 Quebec-built ships, with a total tonnage of 59,333, were registered. Thereafter iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

The manufacture of mineral products has been of comparatively recent date. Iron deposits in the St. Maurice region were worked as early as 1733 and furnaces

* Revised by A. Cohen, B. Com., Acting Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch see Chapter XXIX, Section 1, under "Production".

set up there for smelting in 1737 were in fairly constant operation until 1883. The iron and steel used in manufacturing in Canada, as well as the coal which has supplied the manufacturing industries with power, has in the main been imported from the United States, chiefly because the principal manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years the shortage of coal has been made up for by the increasing use of electric power, while the great bulk of the pig iron used in Canadian manufactures is now made in domestic blast furnaces.

Subsection 1.—Growth of Manufacturing in Canada since 1870.

Growth of Canadian Manufactures Prior to the War.—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from $221,600,000 in 1870 to $469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from $368,700,000 in 1890 to $1,166,000,000 in 1910 and to $1,381,500,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

In the present, as in the past, Canadian manufacturing production has been chiefly dependent upon the use of Canadian raw material, though this is less true than formerly. Raw cotton, for example, is imported from the Southern States, hides from Argentina, rubber from the Straits Settlements and Malay peninsula, sugar from Fiji and the British West Indies, and wool from England, Australia and New Zealand to supply the raw material for Canadian manufacturing industries.

The Influence of the War.—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had previously been imported. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure, not only to produce munitions and military supplies for the armies of the Allies, but also to make the manifold varieties of goods required for the stimulated civilian consumption. The world shortage of staple commodities, coupled with a strong domestic demand, gave Canadian industries in general a pronounced stimulus toward greater production and, in a great number of cases, the capacity of manufacturing plants was increased; this increase created a demand for greater supplies of raw material. Incidentally, factory methods became more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the War, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

The great boom in Canadian manufactures described above reached its height in the summer of 1920, statistics for that year showing a gross value of products which was not exceeded until 1929. These values in 1929 reached a higher point than in the post-war boom of 1920, although the prices of manufactured goods had dropped about 41 p.c. in the intervening period. This steady expansion was halted during 1930, owing to the world-wide recession in business which set in toward the end of 1929, with the result that Canadian manufacturing production in 1930 which was valued at $3,428,970,628 dropped back to near the 1927 level. The recession in manufacturing activity continued during 1931, 1932 and 1933, as a result of which the gross value of production dropped still lower, *viz.*, to $2,086,847,847. However, employment reported by manufacturing firms showed an increase of 11 p.c. in 1934 over 1933, indicating an upturn in manufacturing activity in 1934.

The growth of manufacturing production since 1870 is shown in Table **1** following, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than $3,000,000 per annum on the average of 1871-75 to $614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of "fully or chiefly manufactured" products in the fiscal year ended Mar. 31, 1933, amounted in value to $202,729,536 and exports of "partly manufactured" products to $66,693,633.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1933.

NOTE.—Certain duplications in the gross revenue of central electric stations were eliminated in a net figure and the difference shown as a "cost of material" for the years 1926–29, but net revenues only are now included for both gross and net values for those years. Therefore, the figures here given differ slightly from those formerly published. Also prior to 1929 totals for the chemicals and allied products industry included the value placed on intermediate products used in further processes in the producing works. To this extent, totals are not comparable to those of 1929 and subsequent years. Further, statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Subsection 2.—Summary Statistics of Manufacturing Production.

Summary Statistics of Manufactures.—In Table 4 will be found an analysis of the most important statistics of manufacture for the period 1917 to 1933, here brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that due to the inflation of values during the war and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930 the figures for these years become largely incomparable. One very important figure, however, where the trend of development proceeds clearly and uninterruptedly, is concerned with the use of power. In the analysis here given the aim is to show the position of power as a factor in general manufacturing production. Therefore, the power installation of central electric stations has been excluded. The total horse-power employed increased from 1,664,578 in 1917 to 4,157,420 in 1932 or an increase of 150 p.c. in 15 years. In the same period, the number of horse-power used per establishment increased from 75 to 177 and the number of horse-power per wage-earner from 3·04 to 10·62, indicating the rapidly increasing utilization of power in manufacturing production. The figures for 1933 show a small decrease from 1932. The increase from $118,056 to $193,174 in average capital per establishment between 1917 and 1932, and the decrease from 27·2 to 20·2 in the average number of employees are very significant figures. Another interesting comparison is the progressive decrease in the value added by manufacture per employee and the average salaries and wages paid since 1929. Between 1917 and 1929 the value added by manufacture per employee increased from $2,143 to $2,877 and then declined in 1933 to $2,263, while average salaries and wages increased from $819 in 1917 to $1,171 in 1929 with a decline to $943 in 1933. Compared with 1917, the figures for average salaries and wages in 1933 represent an increase of 15 p.c. while the increase in the value added by manufacture per employee was only 5·6 p.c. and wholesale prices of commodities declined 41·3 p.c. in the same period.

[1]A change in the method of computing the number of wage-earners in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years.

[2]The figures for power in this table represent the installation in manufactures exclusive of central electric stations, which are also excluded from the number of establishments and of wage-earners in working out the averages.

Value of Products.—The gross value of manufactured products in 1932 was reported as $2,126,194,555; the cost of materials was $955,968,683, leaving $1,170,225,872 as the value added by manufacture. As the finished products of one branch of manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include: (1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output; and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the $1,170,225,872 shown as having been added by manufacture, but not so great as the $2,126,194,555 shown as the gross value of production. (The decline of $572,000,000 in gross value of products in 1932 was partly accounted for by a drop of $268,000,000 in the cost of materials.)

Volume of Manufacturing Production in Recent Years.*—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures therefore becomes a matter of great importance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The ever-increasing use of factory products is one of the most significant features of modern life. The process has continued until at the present time fresh fruits and vegetables are about the only articles which reach the consumer without, in some way, being first processed at a factory. Fresh milk is pasteurized and bottled in a dairy plant, fresh fish and meats are dressed principally in packing plants, and the home preserving of fruits and vegetables is being superseded by more efficient processes in the canning factory. Thus even the foods we eat, as well as the clothing we wear, our household conveniences and our instruments of production and transportation, are increasingly products of factories. The growing volume of factory production, therefore, measures approximately the total flow of the economic goods upon which the rising standards of modern life so vitally depend.

The statistics of manufactures afford a variety of measures of the growth of factory production. The number of wage-earners, capital invested, value of production and value added by manufacture all show to some extent the direction and volume of growth. The value of production and that added by manufacture, being reported in dollars, are influenced by price changes as well as by the quantity of goods produced and, as already explained, are rendered misleading by the violent price changes of the past fifteen years. The capital invested is also affected by changing money values, while the relation between capital invested and value of goods produced varies greatly as between one industry and another. Neither is the number of wage-earners employed likely to be a representative measure of changes in the volume of production. The progressively increasing use of machinery and the rise in the power installed per wage-earner (see Table 4) tend to increase the employee's output. Thus while the reported wage-earners in 1931 had increased

*For a much more detailed and comprehensive treatment of this subject see the study "The Quantity of Manufacturing Production in Canada, 1923–29" by A. Cohen, B. Com., Acting Chief, General Manufactures Branch, Dominion Bureau of Statistics.

2·4 p.c. over the number in 1923, the volume of production is estimated to have increased by 18·3 p.c. in the same period.

The central electric stations were excluded from general manufactures in making the index, since this industry is in a class by itself in the peculiar function of its product, and is also unique in the magnitude of its capital investment and the smallness of its labour force in proportion to its net production. The index is based on the quantities of manufactured products reported and includes 71·1 p.c. of the total value of the production in 1926, exclusive of central electric stations. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote on p. 450.

The physical volume of manufacturing production, exclusive of central electric stations, increased 50·2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11·3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would be about 11·3 p.c. Exports of partly and fully manufactured goods increased from $591,830,000 in the fiscal year ended Mar. 31, 1924, to $690,-904,000 in the fiscal year 1930, the increase in exports representing about 3·6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was therefore apparently absorbed by the rise in the standard of living of the population of Canada, and by the increase of that population.

The index of the volume of production dropped from 150·2 in 1929 to 100·1 in 1932, a decrease of 33·4 p.c. This decrease is very significant when compared with the decrease in the net value of production and the number of wage-earners employed.

Owing to declines in the values of finished products (due, in a large degree, to the drastic declines in the values of raw materials) and to the decrease in the volume of production, the net value of production dropped from $1,997,350,365 in 1929 to $1,170,225,872 in 1932, a decrease of 41·4 p.c., while the number of wage-earners dropped from 597,827 to 400,328, a decrease of 33 p.c. It will be noted that the percentage decrease in the volume of production between 1929 and 1932, *viz.*, 33·4, was 0·4 greater than the percentage decrease in the number of wage-earners in the same period. This bears out the observations made in the special study on the volume of production that records of the number of wage-earners may be regarded as more likely to understate than to overstate the changes in the volume of production. As stated previously, the tendency is towards increasing production per wage-earner through greater efficiency and increased use of machinery and labour-saving devices. Also, in times of depression, many establishments follow the practice of keeping the wage-earners on the pay-roll on a part-time basis rather than laying some of them off and employing the rest on full time, while in periods of increased industrial activity the additional output required is secured through overtime work rather than by increasing the number of wage-earners. The net result is to confine fluctuations in the number of wage-earners within narrower limits than that of the physical volume of production. All things considered, however, the average number of wage-earners is materially influenced by the fluctuations in industrial activity. The decrease in the volume of production as compared with the decrease in the number of wage-earners since 1929 is really much greater than the 0·4 p.c. mentioned

above. This fact, however, is obscured by the following changes in procedure: First, the large decrease in the number of wage-earners in 1931 is not entirely due to the decline in manufacturing production. The decrease is in part due to the change in method of computing the average annual employment. Between 1925 and 1930 the average was obtained by summing the averages of individual plants, based on the number of months in actual operation and not by dividing by 12 the sum of the monthly employment figures. For example, if a plant operated only during three months of the year with an employment of 100 persons the first month, 125 the second month and 75 the third month, its average annual employment was taken as 100 (300 ÷ 3); the same as that of another plant which operated the whole year with an average employment of 100 persons per month. In 1931, however, a change was made to the old method whereby the aggregate of the monthly figures is divided by 12. As a result of this change, the average annual employment in such seasonal industries as fruit and vegetable canning and sawmilling was, therefore, considerably lower than formerly without the number of wage-earners being correspondingly smaller. Secondly, prior to 1931, owners working as ordinary wage-earners, such as small bakers, operators of sawmills and grist-mills, etc., reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. By making allowances for the above changes it would be found that in 1931 also the number of wage-earners declined less than the volume of production.

As may be seen from Table 5, all groups in the component material classification reported declines in the volume of production. As compared with 1929, the iron and steel group in 1932 led with a decrease of 58·8 p.c. This was followed by non-metallic mineral products with a decrease of 41·8 p.c., miscellaneous industries 39·9 p.c., wood and paper products 31·6 p.c., non-ferrous metals 27·6 p.c., vegetable products 24·0 p.c., chemicals and allied products 22·2 p.c., textiles and textile products 13·3 p.c. and animal products 12·8 p.c.

When the changes in the volume of production are analysed on a purpose classification basis, some interesting facts are revealed. As compared with 1929, the food group showed a decrease of 9·9 p.c. while production of clothing decreased 18·8 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 60·2 p.c.; this is the greatest decrease of any group. Producers' materials and industrial equipment declined 39·9 p.c. and 41·6 p.c. respectively, owing to the general decline in industrial activity. House furnishings dropped 34·7 p.c., personal utilities 30·7 p.c., drink and tobacco 27·5 p.c. and books and stationery 2·9 p.c. The decrease in the personal utilities group, however, is misleading. The production of the musical instruments industry, which is included in this group, has been decreasing steadily during the past few years; the output of pianos, phonographs and phonograph records is becoming smaller and smaller. The main product of the musical instruments industry, namely, the radio, is now produced in the electrical apparatus industry. This industry, however, is classified in the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

5.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1924-32.

(1923=100.)

Group.	1924.	1925.	1926.	1927.	1928.	1929.	1930.	1931.	1932.

[1]Exclusive of central electric stations.

This new index of the volume of manufacturing production has superseded for 1923 and later years the index shown in Table 4 of this chapter in the 1931 and earlier Year Books. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, while they are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1923, and the new index, transposed to the 1917 base, from 1923 to 1932.

INDEXES OF THE VOLUME OF MANUFACTURING PRODUCTION, 1917-32.

(1917=100.)

1917 100·0	1921 86·1	1925 112·7	1929 157·5
1918 102·0	1922 96·0	1926 128·1	1930 142·8
1919 98·1	1923 104·8	1927 136·5	1931 124·1
1920 95·0	1924 102·9	1928 148·8	1932 105·0

Consumption of Manufactured Products.—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 6, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period

approximately corresponding to 1932 was $2,138,700,245, a figure obtained by adding to the value of products manufactured in 1932 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1933, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, textile, wood and paper, iron and animal products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of $40,000,000 for textiles, and $40,000,000 for iron and steel products. Wood and paper, animal and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups of commodities.

6.—Consumption of Manufactured Products, by Groups, 1932, with Totals for 1922-32.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

Group of Industries.	Value of Products Manufactured.	Manufactured and Partly Manufactured Goods.		Value of Manufactured Products Available for Consumption.[1]
		Value of Net Imports.	Value of Domestic Exports.	
	$	$	$	$
Vegetable products	436,736,251	53,953,170	44,756,484	445,932,937
Animal products	262,793,629	9,026,553	30,754,793	241,065,389
Textiles and textile products	274,411,736	44,651,462	4,356,481	314,706,717

[1]For 1928 to 1932 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible since foreign exports for these years had never been analyzed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927 inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about $11,000,000 in 1922 to $18,000,000 in 1927.

Section 2.—Production of Industrial Groups and Individual Industries.

One of the factors in the progress of Canada is the possession of many natural resources favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals and wild life that Canada's industries are mainly based. The sea and lake fisheries also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the industrial development of Canada was a matter of small beginnings and gradual growth over a period of many years, and the comparatively small home market, restricted at the present time to a population of about ten millions, a large part of it in scattered agricultural areas, is still one of the difficulties of the situation. Yet Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods and her exports of manufactured and partly manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon growth within the Dominion—upon the further development of the many-sided physical assets of the country.

Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

Vegetable Products.—Though first in value of gross production in 1932 this group ranked only fourth in the number of people employed and salaries and wages paid. With the exception of rubber, coffee and spices, sugar factories, and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. They produced in 1932, 20·6 p.c. of the total manufacturing production and employed 14·6 p.c. of all persons engaged in manufacturing industries.

The flour-milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become spectacular. The War and the demand it created gave a great impetus to this trade. The 394 flour mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 5,131,781 barrels in 1932, but in spite of the decrease, Canada continues to be one of the leading exporters of wheat flour.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1930 she was the fifth largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, France and Germany. In 1932, however, Japan and Russia also were ahead of Canada in the imports of raw rubber. Existing plants in 1932 numbered 47 and represented a capital investment of $65,794,903, including equipment and working capital. These plants furnished employment to 10,325 persons who received $9,340,911 in salaries and wages and produced goods valued at $40,746,910. They also used raw materials to the value of $11,906,696, mainly imported from tropical countries. The rubber industry also forms an adjunct of considerable importance to the cotton yarn and cloth industry, which supplies tire fabrics. The industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products find their way to the remotest parts of the world, as a glance at the list of countries to which rubber tires are shipped, would show. Spain, Peru, Dutch East Indies, Portuguese Africa and China are but a few of the far-flung countries into which Canadian tires find their way.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another large division of this group. In 1932, this industry reported an output valued at $30,034,537, a capital investment of $40,586,892 and an employment of 5,954 persons, who received $4,056,746 in salaries and wages. The development of the canned-foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. The industry has made rapid strides in the past few years. During the period of 1923-32 the volume of fruit and vegetable preparations produced increased 88·6 p.c. This growth is indeed remarkable, as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1932 were valued at $2,381,568 and exports at $2,723,326. According to these figures, the industry besides supplying the domestic requirements also has a small exportable surplus.

The sugar-refining industry is also of substantial importance. The demands created by the War gave it a great impetus. All things considered, 1919 was a record year. The number of persons employed (3,491), the value added by manufacture ($16,321,882) and the exports ($22,953,135) were the highest recorded, while the volume of sugar manufactured was only 10 p.c. lower than that of the peak year 1925, when 11,714,967 cwt. was produced. Since 1925, however, exports of sugar have declined with the result that production and employment slackened considerably. In 1932, the 8 sugar refineries reported a capital investment of $37,654,457 and a value of production of $41,022,589. They also employed 2,140 persons, receiving $3,147,753 in salaries and wages, and they paid out $25,716,922 for materials. Exports of sugar in 1932 amounted to 90,483 cwt. valued at $428,337.

The beverage industry—breweries, distilleries and wineries—which are important elements of the vegetable products group, have expanded from a production of $30,000,000 in 1922 to $53,000,000 in 1932, owing partly to the modification of

prohibition laws in Canada and also to the fact that a large part of their production was exported directly or indirectly to the United States. The manufactured tobacco industry, another important factor in the vegetable products group, had a total production in 1932 of over $37,000,000 and a payroll of 8,236 persons, who received $7,127,070 in salaries and wages.

Animal Products.—Production in this group is determined, in large measure, by the demand at home and abroad for Canadian butter, cheese, canned fish, fresh or frozen meats, bacon and hams, condensed and evaporated milk, etc.

The leading industry of the group is that of slaughtering and meat packing, with a value of production in 1932 of $91,246,523. Next comes butter and cheese, with a value of $78,712,905. These two industries represent about two-thirds of the production of the entire group.

The butter and cheese industry, which manufactures a product of farm animals, has been for many years of leading importance in Canada. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec, and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of $78,712,905 coming from no fewer than 2,708 plants, mostly small and scattered at convenient points throughout the farming communities.

The leather industries have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces, and no fewer than 191 boot and shoe factories were in operation in 1932, chiefly in Quebec and Ontario, representing a total capital of over $22,000,000 with an annual output of over $32,000,000 and employing 13,728 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 629 establishments were engaged in 1932 in canning, curing and packing various kinds of fish that were valued at nearly $17,000,000.

Textile Products.—The output of textiles in 1932 was valued at $274,411,736. The establishments classified in this group which numbered 2,002 represent a capital investment of $321,593,062; they furnished employment to 102,116 persons who were paid $82,817,944 in salaries and wages and also spent $129,468,738 for raw materials.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country the textile group was third in 1932 among the ten major groups shown in the summary statistics of Table 3, p. 447, being exceeded only by the wood and vegetable products groups. Textiles accounted for over 12 p.c. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1932 to the employment in the Dominion, the group stood second in the number of employees and also second in salaries and wages paid, with nearly 18 p.c. of the total employees in manufacturing and 13 p.c. of the total salaries and wages paid. Again this wide group of industries may be regarded as two distinct divisions: (1) the spinning, weaving and knitting trades, and (2) the finishing trades. If so regarded, the first division assumes the proportions of a very large industrial group

with a gross production for 1932 of $136,897,332, while the second division is still larger with $137,514,404 for gross production.

The hosiery and knitted goods industry is worthy of special mention. From the standpoint of the value of production the hosiery and knitted goods industry ranked first in the textile group in 1932. Despite the depressed condition of the textile industry generally, the volume and value of production in this branch of the industry held up remarkably well, the value of production being $16,247,308 or 27·3 p.c. lower than the peak year of 1929. Employment also declined by 1,393 or 7·3 p.c. Due to the drastic declines in the value of raw materials with the consequent declines in the value of finished products, the employment figure is a better criterion of the recession experienced by this industry since 1929. The production of hosiery of all kinds in 1932 ranked first in importance with an output valued at $18,683,811. Next in order came underwear, combination and separate garments with a value of $11,122,328. Various other knitted and woven goods, yarns and numerous small sundries made up the balance. The industry is located chiefly in the province of Ontario, the 110 establishments located there producing $28,602,549 or 66 p.c. of the entire output. The province of Quebec followed with an output of $11,727,858 or 27 p.c. of the total.

Other important industries in this group, with the numbers of their employees and values of production, are as follows: women's factory clothing (products $42,564,589, employees 14,276); cotton yarn and cloth (products $38,555,370, employees 15,092); men's factory clothing (products $27,289,591, employees 8,098); silk (products $19,864,843, employees 7,036); men's furnishing goods (products $17,607,656, employees 7,565); dyeing, cleaning and laundry work (products $17,302,779, employees 11,170); woollen cloth (products $13,127,796, employees 4,990); and hats and caps (products $9,464,267, employees 3,095).

The outstanding feature of the textile situation in Canada was the spectacular expansion of the silk industry during the past few years, at a time when practically all other industries were experiencing a diminishing demand for their products. Compared with 1926, this industry increased its output by $11,357,690 or 134 p.c. and also furnished employment to 4,613 more people in 1932; this represented an increase in employment of 190 p.c.

Reports were received from 2,002 establishments in the textile industries in 1932, an increase of 47 over the number reporting in 1931. They reported a gross value of production of $274,411,736, a decline of $42,746,934 or 13·5 p.c. from the previous year. This, however, was caused largely by the lower values of raw materials and finished products, for the index of the volume of production declined only by 4·6 p.c., having dropped from 103·2 in 1931 to 98·5 in 1932. (In this instance 1926 as 100 is the base year.) The amount of capital invested in 1932 totalled $321,593,062, a decrease of $30,751,011 or 8·7 p.c. There were 102,116 persons employed who were paid $82,817,944 in salaries and wages and in comparison with 1931 these figures represent decreases of 3,357 or 3·2 p.c. in the number of persons employed and $9,686,144 or 10·5 p.c. in the amount of salaries and wages paid. The cost of raw and other materials used dropped to $129,468,738, a loss of $23,722,637 or 15·5 p.c., while the value added by manufacture, *viz.*, $144,942,998, declined by $19,024,297 or 11·6 p.c.

Wood and Paper.—The forests of Canada have always been an important factor in the building up and maintaining of manufacturing industries. Since early

pioneering times the sawmill has formed one of the first steps from the pioneering community to the industrial centre. There is to-day practically no form of industrial activity in which wood is not used directly as a raw material or indirectly as, for example, in the form of paper. The primary operations in the woods provide work for at least 200,000 individuals, largely during a part of the year when employment in manufacturing industries is at its minimum, and have a valuable steadying effect on general labour conditions throughout the year.

The manufacture of lumber, which depends to a large extent on building and construction operations and the export markets, has shown wide fluctuations. The peak, reached in 1911 with a total cut of 4,918,000 M ft.b.m. has never been equalled. It was followed by a general decline to the 2,869,000 M ft. reported for 1921. Production then increased with fair regularity to a second peak in 1929 of 4,742,000 M ft. Production since 1929 has decreased annually to the 1,810,000 M ft. reported in 1932.

The manufacturing industries which draw their principal raw material from the sawmills reached their maximum production in 1929 with a gross value of $146,950,000 and then declined to $60,234,000 in 1932.

The pulp and paper industry is a comparatively recent development in Canadian industry. In 1881 there were only 36 paper and 5 pulp mills in operation in Canada. By 1923 the industry had displaced flour milling as Canada's most important manufacturing industry and in spite of recent vicissitudes has held that position ever since. The peak of production was reached in 1929 when 4,021,000 tons of wood pulp and 3,197,000 tons of paper were produced. In that year there were 108 pulp and paper mills in operation, consuming 5,278,000 cords of pulpwood and using hydro-electric power valued at more than $13,000,000. During 1926, Canada, for the first time, produced more newsprint paper than the United States and became the world's chief producer and exporter of that commodity; she has maintained that position ever since in spite of decreases in production. During 1932 this industry produced 2,663,000 tons of pulp and 2,291,000 tons of paper. Of this paper 1,919,000 tons was newsprint and exceeded the production of the United States by over 104 p.c.

The manufacturing industries which draw their principal raw material from the pulp and paper mills reached their maximum production of $187,882,000 in 1929. The value in 1932 for these industries was $135,212,000.

Iron and Its Products.—The manufacture of iron and steel and their products is one of Canada's basic industries. Iron ore is not now produced in Canada, as the known deposits, though extensive, are not of sufficiently high grade to permit economic operation under present conditions. Yet there has been built up a primary steel industry of considerable importance, and the secondary or fabricating industries have been expanding steadily to meet the country's increasing requirements.

There are now four concerns which make pig iron in Canada, one being in Nova Scotia and three in Ontario. The former uses Nova Scotia coal and iron ore from the great Wabana deposits which it controls, on Bell island, Newfoundland, while the Ontario works are dependent on ore and coal brought from the United States. These companies have 11 blast furnaces with a total rated capacity of 1·5 million long tons of pig iron per annum, but the highest tonnage yet attained was 1,080,160 long tons in 1929. Open hearth steel furnaces and rolling-mills are also operated by these companies, which produce steel ingots, blooms and billets, bars, rods, rails, structural shapes, plates, sheets, rail fastenings, etc. Including electric

steel furnaces, there were 28 steel plants in operation in 1932, which, with the 19 rolling-mills, 4 pig-iron plants and 2 ferro-alloy plants, represented a capital of $96,323,629 and employed 4,847 hands to produce primary products worth $16,197,526. This output value was much below normal and in fact was the lowest recorded since the Bureau commenced to collect annual statistics in 1918. The value for 1931 was $36,911,245, for 1930, $52,588,935 and for 1929, $72,231,995.

Automobile manufacturing was the most important of the secondary iron and steel industries in 1932, although the production value of $43,801,389 was the lowest on record for the industry. Seventeen companies manufactured or assembled motor cars in Canada in 1932 and 25 separate factories were in operation. The capacity of these plants was reported at 340,000 automobiles and 32,000 trucks annually, from which it is calculated that the industry operated at about 16 p.c. of capacity during 1932, when only 60,789 cars were produced. In 1929, the year of highest production, the plants operated at 66 p.c. of their estimated capacity. Production in 1929 totalled 262,625 cars at $163,497,675; in 1930 the output was 153,372 cars at $91,766,806, and in 1931, 82,559 cars at $52,964,936. Exports of automobiles and parts declined from $47,005,671 in 1929 to $20,386,354 in 1930 and to $7,091,994 in 1932.

There are also numerous works in Canada for the manufacture of machinery, agricultural implements, railway rolling-stock, automobile parts, boilers and engines, castings and forgings, sheet-metal products, hardware and tools, wire and wire goods, etc., and the variety of products made in these establishments is increasing yearly.

The iron and steel industries, which are engaged almost entirely in the production of capital goods, have been severely affected by the depressed economic conditions of the past few years. In 1932, the 1,233 operating factories reported production valued at only $225,832,185 compared with $374,725,068 in 1931, $569,745,973 in 1930 and $738,012,980 in 1929.

Non-Ferrous Metals.—Production from this group of manufactures, which includes non-ferrous smelters and refineries, electrical equipment factories, brass foundries, etc., has declined considerably during the past two years. Output in 1932 was valued at $152,111,317 or 28 p.c. below the 1931 value of $211,862,412 and 39 p.c. below the total of $250,458,721 in 1930. Capital employed in the 452 operating factories in 1932 was reported at $272,045,441 and the number of employees was given at 26,704.

The smelting and refining of non-ferrous metals was the leading industry of the group in 1932. Thirteen plants were operated in that year by 10 different companies and products were valued at $76,442,076. Capital employed amounted to $149,708,860 and the average number of workers was 5,343. Products included aluminium, nickel, cobalt, copper, zinc, lead, silver, gold, bismuth, cadmium, selenium, radium and other refinery products. Output in 1932 was 22 p.c. lower than in 1931 and 30 p.c. lower than in 1929, the record year.

The electrical apparatus industry also showed a considerable decline in 1932, due chiefly to the poor demand for heavy electrical machinery, wire and cable, and radios. Output in 1932 totalled $53,264,918 compared with $81,578,595 in 1931 and $104,577,790 in 1930. Radio production alone dropped from 291,711 sets at $18,555,710 in 1931 to 121,468 sets at $6,808,877 in 1932.

Jewellery, silverware, white metal alloys, aluminium utensils, and brass and copper goods were the other important products made in factories in this group.

Non-Metallic Minerals.—This group of manufactures includes such leading industries as coke making, oil refining, the manufacture of glass, artificial abrasives, bricks, cement, etc. Final figures for 1932 show that the output for this group amounted in value to $147,765,618, which is 18·6 p.c. below the corresponding total for 1931 and 32 p.c. below 1930.

The petroleum-refining industry is by far the largest of the group. Canada produces some crude oil, but the bulk of the oil treated in Canadian refineries is imported from United States or South America. In 1932 there were 24 refineries operating at advantageous points across the Dominion. The industry used 930,114,055 gallons of crude oil in that year and produced refined commodities worth $71,697,757. About 4,116 people were given employment and the capital investment was $69,475,860.

Chemicals and Allied Products.—That chemical manufactures occupy an important place in Canadian industry is obvious from the fact that in 1932 a total of 15,295 persons were employed in the 662 plants which made chemicals and allied products. These plants produce the greater part of the chemicals that are consumed in this country. In 1932 the apparent consumption of chemicals and allied products amounted in value to $109,364,452, of which $95,279,376 or 87 p.c. was of domestic manufacture.

Chemicals and like products of great diversity are made in Canada, but paints, soaps, medicines, acids and chemical salts are most important. Production from the 14 plants in the heavy chemical industry, which represented a capital of $44,067,194, amounted to $11,357,649 in 1932, while in 1929 it was $28,021,972. Acetic acid, calcium cyanamide, sodium cyanide, caustic soda, soda ash, sulphuric acid, phosphorus, calcium carbide and nitre cake are among the leading products. The export trade in these commodities amounted to about $11,000,000 in 1932.

The medicinal and pharmaceutical preparations industry employed 2,959 workers in 1932 and paid $3,833,778 in salaries and wages. Production in that year was valued at $17,573,979. The paints industry was next in importance, there being 71 factories in this line of manufacture, with output worth $14,912,383. The production of soaps and cleaning preparations was worth $14,739,158 and 1,777 people worked in the 85 factories in this industry. The heavy chemical industry employed 1,679 workers in 14 plants to produce acids, alkalies and salts valued at $11,357,649. Compressed gases, fertilizers, coal-tar products, wood-distillation products, inks, adhesives, polishes, and a multitude of other such products are also made in the chemical plants.

Many chemical products are also made in industries which for statistical purposes are not included in the chemicals and allied products group. For instance, pulp and paper, distilled liquors, brewery products and artificial abrasives are classified in other groups. By extending the scope of the chemical industry to include these other factories, which primarily use chemical processes, approximately 70,000 workers would be employed and production would total over $425,000,000.

Central Electric Stations.—This industry is shown under the totals by groups in Table 7 as a separate group in order to facilitate the presentation of statistics of power installed in the other groups and industries. (See also pp. 427-430.)

The principal statistics of each of the manufacturing industries of Canada during 1932 are presented in Table 7 on pp. 462 to 467.

Subsection 2.—Manufactures Classified by the Purpose of the Products.

Production of Manufactured Goods According to the Purpose Classification.—In addition to the classification according to the chief component material of the products, used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 8 for the years 1922, 1924, 1927, 1929, 1930 and 1931 in summary form, and for 1932 in more detail.

During the period covered by this table, the gross production of the food industries dropped from 27·1 p.c. of the total for all industries in 1922 to 23·2 p.c. in 1932, while the "drink and tobacco" group during the same period rose from 4·0 p.c. to 5·0 p.c. On the other hand, the percentage of the "clothing" group remained about the same, being 9·5 p.c. in 1922 and 10·0 p.c. in 1932. The "industrial equipment" and "books and stationery" groups advanced respectively from 17·0 p.c. and 4·0 p.c. in 1922 to 20·1 p.c. and 5·3 p.c. The following groups, however, declined in importance: the "producers' materials" group dropped from 26·8 p.c. to 25·8 p.c.; "vehicles and vessels" from 6·5 p.c. to 6·0 p.c.; "house furnishings" from 2·6 p.c. to 2·0 p.c.; and "personal utilities" from 2·3 p.c. to 1·7 p.c.

In analysing the relative standing of the two groups which are perhaps of the greatest interest, it is noted that the gross production of the "food" industries in 1932 was 23·2 p.c. of the output of Canadian manufactures, as compared with an output of only 10·0 p.c. for the "clothing" industries. Aside from the fact that a much larger proportion of its products is exported, the greater production of the "food" group was in part due to the higher cost of raw materials, the value added by manufacture being 16·2 p.c. of the total for all industries in the case of the "food" group and 9·4 p.c. for the "clothing" group. The "clothing" industries also gave employment to 11,021 more persons than the "food" industries, but paid out $2,276,685 less in salaries and wages.

8.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-32, and in Detail for 1932.

Subsection 3.—Manufactures Classified by Origin of the Materials.

Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 9 for the years 1924, 1927, 1929, 1930, 1931 and 1932. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons may be made with the external trade classification according to origin.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

While the period reviewed in the following table only covers the short space of the 9 years from 1924 to 1932, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to discover the relative importance of the manufacturing work done upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products.

The values added in the manufacture of materials of farm origin represented 30·8 p.c. of the total value added by manufacture in all industries. This group remained stationary, having advanced but 0·1 p.c. since 1924. The second largest group from the point of view of value added is that of mineral origin which accounted for 28·7 p.c. of the total value in 1932. This group, however, rose in importance, having increased 0·9 p.c. since 1924. The values added by the industries of the forest group which are third in importance declined from 23·8 p.c. of the total in 1924 to 18·9 p.c. in 1932. This was the greatest decline of any group. On the other hand, central electric stations bettered their position, the percentages of the totals being 7·6 in 1924 and 11·0 in 1932. The increase during the period under review in the relative importance of the industries of the mineral group was probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, increasing activity in construction which absorbed large quantities of steel, cement and various other manufactured mineral products, and the development of metallurgical plants in Canada were some factors in the growing importance of the mineral group of industries. Another factor in this trend has been the growing appreciation and development of the wealth of the mineral resources of Canada. Not only have the various mining activities made the raw materials for mineral industries more readily available, but those activities have also required large quantities of machinery, electrical apparatus and other finished products of mineral origin.

In the year 1932, the industries of the farm group exceeded those of any other group in the net value of products with 30·8 p.c. of the total, as compared with 28·7 p.c. for the mineral and 18·9 p.c. for the forest origin groups. These three principal groups stood in the same order of importance with regard to employees engaged, but as regards salaries and wages paid, the mineral group came first, followed by the farm and forest products groups respectively. In the matter of capital invested the mineral group also led with 28·5 p.c. of the total, followed by central electric stations with 28·2 p.c., the forest group with 19·9 p.c., and the farm group with 18·3 p.c.

9.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-32.

Subsection 4.—The Forty Leading Manufacturing Industries.

There was a number of significant changes in the ranking of the ten leading industries in 1932, aside from the appreciable decreases in production, employment, etc. Tables **10, 11** and **12** which follow show the forty leading industries for 1932 ranked according to the gross value of products, the net value of products, and the salaries and wages paid, respectively.

The Forty Leading Industries in 1933.—The completion of part of the compilation of the Census of Manufactures for 1933 permits of the inclusion as Table **10A** of the forty leading industries classified according to gross value of production for that year. In the following statement the ten leading industries for 1933 are compared as to their respective ranks in 1933, 1932 and 1931:—

THE TEN LEADING INDUSTRIES, 1933, COMPARED AS TO RANK FOR THE YEARS 1933, 1932 AND 1931.

Industry.	Rank in 1933.	Rank in 1932.	Rank in 1931.
Pulp and paper	1	1	1
Central electric stations	2	2	2
Non-ferrous metal smelting	3	6	4
Slaughtering and meat packing	4	3	3
Flour and feed mills	5	4	5
Butter and cheese	6	5	6
Petroleum products	7	7	8
Bread and other bakery products	8	9	12
Cotton yarn and cloth	9	16	22
Printing and publishing	10	8	11

The outstanding change has been in the cotton yarn and cloth industry which was in twenty-second place in 1931, sixteenth in 1932 and has taken ninth place in 1933, having displaced the railway rolling-stock industry which was in tenth place in 1931 but is now in twenty-fourth (see Table **10A**).

19.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1932.

No.	Industry.	Establishments.	Capital.	Employees.	Salaries and Wages.	Cost of Materials.	Value of Products.

Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1932 amounted to $1,696,000,000, or nearly 80 p.c. of the gross value of manufactured products of the Dominion. Of this amount Ontario contributed $1,028,000,000 and Quebec $668,000,000. The proximity of Ontario to the coal fields of Pennsylvania, the water-power resources of the two provinces and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1932 the third largest gross manufacturing production, $141,000,000, and Manitoba the fourth, $96,000,000. Alberta, Nova Scotia, New Brunswick and Saskatchewan followed in the order named, with gross production ranging from $55,000,000 to $36,000,000, succeeded by Prince Edward Island with $3,567,000.

Subsection 1.—The Manufactures of the Maritime Provinces, 1932.

Table 13 gives the statistics of the leading industries of each of the Maritime Provinces for the year 1932. In Prince Edward Island, fish canning and curing with a gross production of $833,055, was foremost, followed by butter and cheese, central electric stations, slaughtering and meatpacking, etc. Manufacturing in Nova Scotia and New Brunswick is, of course, to a considerable extent dominated by the steel industry in the former and the forest industries in the latter, although there is a large sugar refinery in each province. The pulp and paper industry, with a gross value of production of $12,823,270 in 1932, was the most important industry in New Brunswick, followed by central electric stations with an output of $3,340,257 and sawmills with an output of $2,208,916. These three industries combined provided nearly 40 p.c. of the gross manufacturing production of the province. In Nova Scotia, fish canning and curing with an output valued at $4,633,955, was the leading industry in 1932. Usually the primary iron and steel industry is of chief importance in Nova Scotia but, in 1932, due to the same economic conditions which so seriously affected this industry elsewhere in Canada, it dropped to fourth place. Other leading industries were: central electric stations, pulp and paper, butter and cheese, etc.

13.—Statistics of the Leading Industries of each of the Maritime Provinces, 1932.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Prince Edward Island, castings and forgings, and railway rolling-stock; in Nova Scotia, petroleum, sugar refineries, breweries, and coke and gas products; in New Brunswick, sugar refineries, soaps and washing compounds, and railway rolling-stock. The statistics for these industries are included in the item "all other leading industries".

[1]Read headnote to this table on p. 479.

Subsection 2.—The Manufactures of Quebec, 1932.

The pulp and paper mills of Quebec, the most important manufacturing unit of the province, produced goods with a selling value at the factory of $63,317,497 in 1932. This exceeded by nearly $19,000,000 the gross value of products of central electric stations ($44,720,404), the industry which ranks second in importance. This was followed by non-ferrous metal smelting and refining ($35,141,813), tobacco, cigars and cigarettes ($31,923,004), cotton yarn and cloth ($26,974,004), women's factory clothing ($23,193,839), boots and shoes ($18,635,509), petroleum products ($18,241,142), etc. A change took place in the ranking of some of the important industries of the province. The non-ferrous metal smelting and refining industry advanced from eighth place in 1930 to third place in 1932, while sawmills dropped from fifth to twenty-first place. Compared with 1931, the petroleum products industry advanced from fifteenth to eighth place, the silk industry also advanced from twenty-first to fourteenth place while railway rolling-stock dropped from sixth to fifteenth place.

The importance of the pulp and paper industry in Quebec is shown by a comparison with the industry throughout Canada. The Quebec section of the industry, in addition to supplying about ten per cent of the total gross value of all products manufactured in the province, furnished 47 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 70 p.c., the value of railway rolling-stock 40 p.c., the value of tobacco, cigars and cigarettes 85 p.c., and the value of boots and shoes 58 p.c. of the Dominion totals for these products. Thus, Quebec is an outstanding manufacturing province rather on account of her individual industries than because of the diversification of her industrial activity.

14.—Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1932.

NOTE.—Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published because there are fewer than three establishments reporting.

Subsection 3.—The Manufactures of Ontario, 1932.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1932 represented over 48 p.c. of those of the whole Dominion, while those of Quebec, the second province in importance in this respect, amounted to about 32 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; in 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c. ; 1890, 51 p.c., and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production almost equal to that of the remainder of the Dominion.

Central electric stations came first in 1932 in the value of production. This amounted to $49,952,973 as compared with $46,547,469 for flour and feed mills, the industry which held second place. Other important industries, in descending order, with the values of their products in 1932 were: pulp and paper $44,027,587, automobiles $43,323,789, slaughtering and meat packing $42,809,535, electrical apparatus and supplies $39,830,967, butter and cheese $39,085,773. Due to the general depression still prevailing during 1932, the leading industries of Ontario, in common with many others, reported considerable decreases in the gross values of production, as compared with the previous year. The output of the electrical apparatus industry declined $24,000,000, non-ferrous metal smelting and refining $19,000,000, castings and forgings $15,000,000, automobiles $14,000,000, slaughtering and meat packing $14,000,000, pulp and paper $9,000,000 and rubber goods $9,000,000. An important change took place in the ranking of some of the leading industries. Automobiles, which for a number of years ranked as the premier industry of Ontario, declined to fourth place in 1932, while electrical apparatus and supplies, which ranked first in 1931, dropped to sixth place in 1932. Central electric stations on the other hand advanced from sixth place in 1931 to first place in 1932.

Indicating the greater diversification of industry in Ontario as compared with Quebec, the percentages which the forty leading industries bore to the total manufactures of the province were higher in nearly every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments and employees. Outstanding among the industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage which the production of each bore to that of the Dominion in 1932, were as follows: agricultural implements, 93 p.c.; leather tanneries, 86 p.c.; rubber goods, 80 p.c.; furniture and upholstering, 70 p.c.; fruit and vegetable canning, preserving, etc., 70 p.c.; electrical apparatus and supplies, 75 p.c.; castings and forgings, 61 p.c.; primary iron and steel, 63 p.c.; slaughtering and meat packing, 47 p.c.; flour and feed mills, 55 p.c.; hosiery and knitted goods, 66 p.c.

15.—Principal Statistics of the Forty Leading Industries of the Province of Ontario, 1932.

No.	Industry.	Establishments.	Capital.	Employees.	Salaries and Wages.	Cost of Materials.	Gross Value of Products.

Subsection 4.—The Manufactures of the Prairie Provinces, 1932.

The flour and feed milling industry in 1932 was outstanding among the manufactures of the Prairie Provinces when treated as a single unit. During 1932, as may be seen from Table **16**, the gross value of production of flour and feed mills was $24,246,761 (Manitoba $6,443,072, Saskatchewan $9,468,912 and Alberta $8,334,777). The second industry from the point of view of gross value of production was slaughtering and meat packing, with products valued at $23,704,599

(Manitoba $13,011,468, Saskatchewan $2,256,091 and Alberta $8,437,040). Butter and cheese comprised the third largest group, with an output valued at $15,754,928, followed by central electric stations $15,693,275, railway rolling-stock $12,014,633, petroleum products $11,058,020, etc.

The order of the leading industries is somewhat different in each province. In Manitoba, the leading industries, with their gross values of products in 1932, were as follows: slaughtering and meat packing $13,011,468, railway rolling-stock $8,936,011, central electric stations $6,534,141, flour and feed mills $6,443,072 and butter and cheese $6,239,213. In Saskatchewan the leading industries were: flour and feed mills $9,468,912, petroleum products $5,694,731, butter and cheese $5,000,690 and central electric stations $4,478,110. In Alberta, slaughtering and meat packing, with an output of $8,437,040, was the leading industry. This was followed by flour and feed mills $8,334,777, petroleum products $5,363,289, central electric stations $4,681,024 and butter and cheese $4,515,025.

The importance of these industries, based on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident.

16.—Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1932.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Manitoba, non-ferrous metal smelting and refining and, in Alberta, sugar refining and wood preservation. The statistics of these industries are included under the heading "all other leading industries" in the case of Alberta.

[1] Read headnote to this table on p. 484.

Subsection 5.—The Manufactures of British Columbia*, 1932.

British Columbia was, in 1932, the third most important manufacturing province in the Dominion, producing goods to a gross value of $140,538,016. About 13 p.c. of this production, or $17,729,397, is seen in Table 17 to be that of the sawmilling industry; the predominance of forest products industries in the industrial life of the province is still further emphasized if to this figure be added $11,056,236, the value of products of the pulp and paper industry which ranks second. Third in importance among the industries of British Columbia is central electric stations, with a gross value of production of $10,082,357. This was followed by fish curing and packing $9,085,834, petroleum products $7,182,495, slaughtering and meat packing $6,001,923. Fish curing and packing, which usually ranks as the second industry, declined to fourth place in 1932.

*Including the Yukon Territory.

Section 4.—Principal Factors in Manufacturing Production.

Subsection 1.—Capital Employed.

In a retrospective study of capital employed in Canadian manufactures since 1900, the remarkable increase denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from $446,900,000 to $833,900,000, and advanced to $1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands and over, and while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1932, in all establishments irrespective of the number of employees, was $4,741,255,610 as compared with $4,961,312,408 in 1931 and with $2,696,154,030 in 1917, an increase of 76 p.c. in 15 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investment of capital. Capital employed in Ontario was 48·3 p.c. of the total in 1917, 52·4 p.c. in 1923 and 45·2 p.c. in 1932. The percentages employed in the plants of Quebec were: 29·4 in 1917, 29·8 in 1923 and 34·4 in 1932. British Columbia held third place in 1932 with a capital investment of 7·7 p.c. of the total, while Manitoba, Nova Scotia, New Brunswick, Alberta and Saskatchewan followed in the order named, with proportions varying between 4·0 p.c. and 1·3 p.c. (Table **18.**)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the central electric stations industry led, in 1932, with an investment of 28·2 p.c. of the total. The wood and paper group was second with 20·1 p.c., the iron and its products group third with 12·8 p.c. and the vegetable products group fourth with 10·9 p.c. Up to 1931 the wood and paper group had long been first in the amount of capital employed, but in that year the central electric stations group assumed the premier position. (Table **18.**)

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportions of fixed and liquid assets. In 1923, land, buildings, machinery and tools constituted 64 p.c. of the total capital, while in 1929 the proportion had increased to 66 p.c. and in 1932 to 74 p.c. The fixed assets amounted to $3,511,904,606 in 1932, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash and sundries, were valued at $1,229,351,004. Details by provinces and industrial groups are given in Table **19.**

Subsection 2.—Employment in Manufactures.

The total number of persons employed in the manufacturing industries of Canada, according to the statistics collected for 1932, was 495,398, as compared with 557,426 in all such industries in 1931 and 694,434 in 1929. The 1932 employees included 95,070 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 400,328 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the payrolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12, whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries but

also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method exerted a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the former method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year. This apparent increase was offset in part by a corresponding decrease in the number of wage-earners. Actually there was a decrease in salaried employees.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table **20.** Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see pp. 450 to 453 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. Since central electric stations were excluded in computing the index of the volume of production, employees in these establishments have been excluded also in computing the percentages relative to 1917 for both wage-earners and total employees, and consequently from the indexes of efficiency of production. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925 and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has been able to raise real wages through a large increase in production per wage-earner, accomplished by better organization and the use of improved equipment. Capital invested in manufacturing industries, exclusive of central electric stations, has increased by 45·0 p. c., from 1917 to 1932, compared with a decrease of 28·5 p.c. in wage-earners, while the horse-power used per wage-earner has increased from about 3 in 1917 to 11 in 1932. The factor of better organization is not susceptible of measurement. However, salaried employees have increased by 35·2 p.c. since 1917, or more nearly in proportion to the growth in production than have wage-earners. The result of these developments has been the increase of 46·9 p.c. in the volume of production per wage-earner and a smaller increase of 34·1 p.c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency from 1920 and 1921 may be partly accounted for by their elimination in the contraction of industrial operations which occurred at that time.

20.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-32.

Note.—Employees of Central Electric Stations are excluded in this table since factors of production and efficiency for that industry are not representative and would vitiate the result.

Year.	Salaried Employees.	Wage-Earners.	Total Employees.	Percentage relative to 1917.		Index Number of Volume of Mf'd. Products.	Efficiency of Production.

Statistics of employment in manufacturing industries during 1932 derived from the Census of Manufactures, are shown in Table **7** of this chapter (pp. 462 to 467). According to these statistics, the 24,544 establishments covered, employed 95,070 salaried employees and 400,328 wage-earners, a total of 495,398 persons. Out of every 1,000 persons employed in manufacturing, 192 were classed as salary-earners and 808 as wage-earners; the former earned 32·5 p.c. and the latter 67·5 p.c. of the total amount paid out as remuneration for services.

Distribution of Employees in 1932.—An analysis of the returns by provinces shows that 48,228 or 50·7 p.c. of all the employees on salaries were employed in Ontario; of this number 36,312 were males and 11,916 were females. The province of Quebec, with 27,543 persons or 29·0 p.c. of the total, recorded the second largest number of salaried workers; of these 22,298 were males and 5,245 were females. British Columbia ranked third with 5,700 or 6·0 p.c. of the total salaried employees.

Of the wage-earners employed, who numbered 400,328, 47·7 p.c. were employed in Ontario, 33·5 p.c. in Quebec and 5·9 p.c. in British Columbia. It is also interesting to note that out of every 1,000 salaried employees 218 were females, while in the case of wage-earners, 247 out of every 1,000 were females. (See Tables **21** and **25.**)

The wood and paper industries with 23,437 salaried employees reported a larger number than any other group, having 24·6 p.c. of the total. The vegetable products group came next with 14,305 salaried employees or 15·1 p.c. of the total. The textile industries gave employment to a proportionately greater number of female salaried employees than any other group. Out of every 1,000 salaried employees in this group 323 were females, as compared with only 205 for all the other groups.

In the number of wage-earners employed, the textile industries came first with 91,559 or 22·9 p.c. of the total. This was closely followed by the wood and paper products group with 84,397 wage-earners or 21·1 p c. of the total. It is of interest to note that out of every 1,000 wage-earners in the textile industries 578 were females,

while in all the other groups only 149 were females. The importance of the textile industries in providing employment for females is strikingly illustrated by the fact that out of all female employees engaged in the manufacturing industries of Canada, 47·1 p.c. were found in the textile group.

21.—Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1932.

Monthly Record of Employment in Manufactures.—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 22 for the years 1922 to 1932 and by sex for 1922 and 1932. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931 and 1932 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 596,544 wage-earners were on the payrolls. This compares with the peak month in 1930 of 556,386 wage-earners, 484,661 the peak month of 1931 and 417,685 the peak month in 1932.

22.—Total Number of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months, 1922-1932 and by Sex, 1922 and 1932.

Hours Worked by Wage-Earners.—Weekly hours worked by wage-earners in the month of highest employment in 1932 are shown in Tables **23** and **24** by provinces and groups and for the forty leading industries. An explanation should be made of the term "month of highest employment" as used in connection with these tables. Each firm is required to report the number of wage-earners working specified hours per week during the month in which the greatest number were employed. It therefore happens that in the case of one firm the month of highest employment might be May, while in that of another it might be October. The month of highest employment as shown in the heading of Table **23,** therefore, is not any particular month, and the total number of workers is the sum of those employed in the different months of highest employment as reported by all firms. In the particular case of a given industry, however, the month of highest employment is the same for a majority of the firms operating. This would apply to some extent in the broad industrial groups in the second half of Table **23,** but more particularly to the forty industries of Table **24.** For Canada as a whole, 53 p.c. of the wage-earners in 1932 worked 48 hours or less, 14 p.c. worked between 49 and 50 hours and 33 p.c. worked over 50 hours per week. Average hours worked per week may also be worked out for the provinces and industrial groups and for the forty leading industries from the figures shown in the tables following.

23.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1932, by Provinces and Groups.

(These are the regular hours worked per week and do not therefore include overtime.)

Province or Group.	40 hours or less.	41-43 hours.	44 hours.	45-47 hours.	48 hours.	49-50 hours.	51-53 hours.	54 hours.	55 hours.	56-59 hours.	60 hours.	Over 60 hours.

Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries, 1932.

The total salaries and wages disbursed by manufacturers in 1932 were $505,883,323 paid to 495,398 workers, compared with $813,049,842 paid to 694,434 persons in 1929 and $509,382,027 paid to 621,694 persons in 1917. Of the 1932 aggregate, $164,695,605 or 32·5 p.c. was paid to 95,070 salaried employees who constituted 19 p.c. of the total number, while $341,187,718 or 67·5 p.c. was paid in wages to 400,328 wage-earners, who formed 81 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1932 was $1,732, compared with $1,872 in 1931 and $1,299 in 1917, while the average wage in 1932 was $852, compared with $957 in 1931, $1,045 in 1929 and $760 in 1917. Thus during the sixteen years under review average salaries increased by 33 p.c., while average wages increased only by 12 p.c. (See Tables **4** and **25**.)

Average Earnings, by Provinces and Industrial Groups.—In 1932 Ontario showed the highest average salary of $1,806, followed by Quebec with $1,724, Manitoba, with $1,685 and British Columbia with $1,658. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tends to raise the average salaries in these provinces. In the other Prairie Provinces the averages were smaller, especially in Saskatchewan, while in the Maritime Provinces the average salaries were still lower, there being comparatively few large executive offices in these provinces.

British Columbia, with an average wage of $999, ranked highest in the Dominion in 1932, being $147 higher than the general average. In the western provinces average wages are usually higher, this being due to an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces east of the Ottawa river, average wages in manufacturing were under the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish-preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while in addition to this, Quebec has a larger proportion of female wage-earners, employed chiefly in the textile, food and tobacco industries, than any other province, except Prince Edward Island.

The highest average salary, *viz.*, $1,988, was reported by the chemical and allied products group, while the wood and paper products group, with an average salary of $1,373 in 1932, was the lowest. In wages paid, central electric stations came first with an average of $1,360, there being no female wage-earners in this industry. The textile industries, on the other hand, had the lowest average wage of $697, this being due to the fact that in this group nearly 58 p.c. of the wage-earners were females. As stated in Table **21** of this chapter, of all the female wage-earners employed in the manufacturing industries of Canada, over 53 p.c. found employment in the textile industries.

Average Earnings in the Forty Leading Industries.—Table **26** shows the employees by sex and average salaries and wages in the forty leading industries during 1932, and the salaries and wages in 1931. The rank of each industry is based on the aggregate of salaries and wages paid, as in Table **12** on p. 478.

In four industries only did average salaries exceed $2,300; in seven they ranged from $2,000 to $2,300; in twenty-two they were from $1,500 to $2,000, while in only seven were they below $1,500. None of the four industries paying the highest salaries—sugar refining $2,906, breweries $2,550, petroleum products $2,375 and pulp and paper $2,327—reported a proportion of female staff equal to the average percentage in the forty leading industries. The lowest salaries were reported by the sawmilling, bread and other bakery products, and butter and cheese industries.

The highest wages, or those above $1,200, were paid in six industries—non-ferrous metal smelting and refining $1,540, printing and publishing $1,364, central electric stations $1,360, petroleum products $1,310, coke and gas products $1,261 and sugar refining $1,215—in all of which the proportion of skilled workers is probably high. In six other industries the average wage ranged between $1,000 and $1,200. These were largely metal-working industries, breweries, printing and bookbinding, and paints, pigments and varnishes, in all of which the proportion of women employed was low. In the remaining twenty-eight industries the average wage was below $1,000. This last group included such seasonal industries as sawmilling and the flour and feed milling industry with a large number of small feed and grist mills in which the work is intermittent. The other industries with low average wages were textiles, tobacco and boots and shoes, in which the proportion of female wage-earners was high, the number in several industries being greater than that of the male wage-earners.

26.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1932, together with Comparative Figures of Average Salaries and Wages Paid in 1931, and Totals and Averages Paid in Previous Representative Years.

(Industries ranked according to the aggregate salaries and wages paid as in Table 12.)

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 17·9 p.c. between 1917 and 1932. The details of the computation are given in Table **27.** There was little change in real wages during the three years 1917 to 1920 when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased over 5 p.c. Since then there has been an almost continuous rise from year to year with the exception of 1930. In 1931 real wages reached a maximum of 120·2, declining to 117·9 in 1932.

27.—Average Yearly Earnings and Index Numbers of Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917-32.

NOTE.—The figures of average earnings for the years 1931 and 1932 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years as for the earliest represent the earnings for complete man-years of work, with no allowance for periods of unemployment. See footnote 1 to Table 4, p. 449.

Percentages of Wages and Salaries to Net Values of Production.—Table **28** shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must in the long run come are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, charges for fuel, power, lighting, repairs, and all other overhead charges. The percentages of salaries were higher in the years 1921, 1922, 1924, 1931 and 1932. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower level of production then prevailing. The percentage declined with the increasing manufacturing production after 1922, but in 1929 was still much higher than in 1917, while in 1930, 1931 and 1932, due to decreased industrial activity, the percentage of salaries to value added rose to 10·5, 12·7 and 14·1 respectively. It should be borne in mind, however, that salaried employees increased by 38·4 p.c. in the period, while wage-earners decreased 27·6 p.c. (Table **20**). The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The

percentage of wages to the values added in manufacture was thus only 2·4 p.c. lower in 1932 than in 1917. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest (Table **27**) and the efficiency of production lowest (Table **20**).

Subsection 4.—Sizes of Manufacturing Establishments.

An essential characteristic of the recent evolution of industry has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market, and the development of more efficient methods of business administration has made it possible for the individual manufacturer to supervise effectively a larger plant. An increase in the scale of production of the typical manufacturing establishment has been experienced in all industrial countries which have been affected by the so-called "Industrial Revolution", and not least in Canada where the rise of the factory system in industry has taken place approximately since Confederation.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries, though obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: first, they depend on the fluctuation of business activity and in times of depression there is an apparent shrinkage in the size of establishments as measured by either method; secondly, over any lengthy period of

time there is the difficulty of comparability resulting from changes in the method of the census.

Thus, while it is possible in a general way to state that the average size of the manufacturing establishment in Canada has increased between 1870 and 1932, the 1932 figures are not on the same basis as the 1870 figures, especially since they do not include all the small custom and repair establishments included at the earlier date. Some difficulties arise right up to the most recent times. In 1932, for example, due to the difficulty of eliminating duplication in the value of production in central electric stations as well as the difficulty of apportioning the capital investment as between different cities, it has been found necessary to exclude figures for central electric stations in showing statistics of size of establishment as well as in statistics of cities and towns. Except in this particular the figures for 1922 and 1932 shown in Table **29**, are, however, quite comparable,

Size as Measured by Gross Value of Products.—In Tables **29** and **30** the size of the establishments reporting to the Census of Manufactures is shown by the gross value of products—Table **29** giving comparative figures for 1922 (the first year for which the figures are available), and 1932, and Table **30** the figures by provinces for 1932.

In 1922 the 420 establishments which had each a gross production of over $1,000,000 had an aggregate value of products of $1,268,056,129, or 51 p.c. of the total production of all manufacturing industries. By 1929 such establishments numbered 719 and accounted for 62 p.c. of all manufacturing production—a very significant change in the short period of seven years. However, as a result of the ensuing decline in industrial activity, by 1932 there were only 329 of such establishments and these produced goods to a value of only $916,630,395 or 46 p.c. of the total for all industries, exclusive of central electric stations. The exclusion of this industry in 1932 no doubt reduced the number and the aggregate value of production of establishments producing over $1,000,000 each, but it is improbable that this exclusion was responsible for lowering the proportion of that production to the total for all industries as much as was curtailed industrial activity, which resulted in many plants operating below capacity and therefore dropping into lower categories. The effect of lower prices was also considerable.

29.—Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922 and 1932.

Size as Measured by Number of Employees—In Tables **31** and **32** (see p. 502) the establishments reporting to the Census of Manufactures are classified by the number of their employees. In 1923, establishments employing 501 hands or over accounted for 21·4 p.c. of the total number of employees engaged in manufacturing. By 1929 they accounted for 27·3 p.c. of the total, indicating the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped to 21·6 (central electric stations included). The same also holds true for all establishments employing 100 hands and over. In 1923 they employed 58·6 p.c. of the total, in 1929, 61·9 p.c. and in 1932, 58·0 p.c.

31.—Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923 and 1932.

NOTE.—The total of employees in 1932, exclusive of central electric stations, exceeds the total of 480,003 given elsewhere in this report because 3,169 contract workers in the salmon canneries of British Columbia and other provinces are included here but are excluded elsewhere.

Subsection 5.—Power and Fuel.

Power.—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are treated in Table **33** separately from the other groups of industries. Internal combustion engines include all gasolene engines, natural, coal, and producer gas engines, and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

The rapid increase in the development of power in Canada and in its utilization in manufacturing industries is illustrated by the summary figures for the years 1921 to 1932 in Table **33.** The table is divided into two parts, the first showing manufacturing industries exclusive of central electric stations and the second showing central electric stations only. The abundance of readily available water power in many parts of Canada, facilitating the development of low-cost hydro-electric power, has no doubt played a large part in this rapid growth. Of the total primary power increase of 4,854,632 h.p., inclusive of central electric stations, in the 12 years, no less than 4,370,610 h.p. or 90 p.c. was in water power. However, some sections of Canada are not so well provided with water-power resources and chiefly in such sections primary power derived from steam engines and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta, primary power produced from fuels exceeded that from water in 1932. The total installation of electric motors increased 2,196,105 h.p., or 216 p.c. in the 12 years covered, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Comparisons with the data for 1921 show an increase in 1932 of 4,854,632 h.p. or 155 p.c. in the total primary power equipment in all manufacturing establishments, including central electric stations, by far the largest increase, amounting to 4,417,114 h.p., being in central electric stations. Of this increase in central electric stations, water-power development accounted for 4,209,902 h.p., while steam power installed increased by 187,483 h.p. and internal combustion engines increased by 19,729 h.p. Provinces with large water-power developments show the greatest increases in primary power. For all manufacturing industries, including central electric stations, the province of Quebec led with an increase of 2,343,751 h.p. during the period under review. Ontario came second with an increase of 1,174,146 h.p., British Columbia third with an increase of 466,735 h.p., Manitoba fourth with 379,505 h.p., Nova Scotia fifth with 185,412 h.p., New Brunswick sixth with 131,544, etc. In the utilization of hydraulic power, Quebec exceeded Ontario for the first time in 1925. In 1927 Quebec exceeded Ontario and all other provinces in the total of installed primary power from all sources and has been the leading province since then, largely owing to its extensive water-power resources, 93 p.c. of its primary power in 1932 being derived from water.

Fuel.—The fuel used in industrial establishments in 1932 included 4,184,299 tons of bituminous coal valued at $22,063,901, constituting 58·1 p.c. of the total fuel cost. The other chief fuels in order of value were: fuel oil, comprising 13·2 p.c., gas (principally manufactured gas) 12·5 p.c., anthracite coal 4·8 p.c., coke 4·3 p.c. and wood 4·1 p.c. Out of a fuel account of about $38,000,000, Ontario expended $18,101,434 or 47·7 p.c. of the total. The manufacturing concerns of Quebec expended $9,688,778, British Columbia $2,551,125 and Nova Scotia $1,844,901.

The groups of industries in which fuel was most extensively used in 1932 were: non-metallic minerals $8,306,496, wood and paper $7,807,857, vegetable products $5,668,346 and iron and its products $5,126,028. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast furnaces and steel mills, smelting plants, brick-, tile-, lime- and cement-making, petroleum refining and the glass industry. In such industries as the manufacture of coke and gas the coal used as a material which enters into the actual composition of the product is not treated as a fuel but as a raw material and is not, therefore, included in the figures of Table **34.**

The total annual expenditure on fuel decreased by $13,692,946 or 26·5 p.c. in the 11 years from 1921 to 1932, covered by the summary figures in Table **34.** During this period prices of fuels generally have declined. Thus there has been an increase of 2·0 p.c. in the quantity of bituminous coal used while the value has decreased 36·5 p.c.

[1]Includes other kinds of fuel which in 1932 were as follows: Gasolene, $290,806 and other fuels $816,413.

Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 35, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows, by provinces, the proportion of the gross manufacturing production which is produced in cities and towns having a gross production of over $1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for about 87 p.c. of the total, while in British Columbia and Prince Edward Island, where sawmilling, fish packing, and dairying are leading industries, the proportion falls to 55 p.c. or less. In the Prairie Provinces manufacturing is largely confined to a few large urban centres.

35.—Cities and Towns with a Gross Manufacturing Production of over $1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1932.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 37, as in the table below statistics of towns with fewer than three establishments and a production of over $1,000,000 each are included. It was not possible to publish this information in Table 37 without disclosing the operations of individual establishments. The statistics in this table do not include central electric stations.

Province.	Cities and Towns with a Gross Production of over $1,000,000 each.	Establishments Reporting in Cities and Towns Producing over $1,000,000 each.	Total Production in Cities and Towns Producing over $1,000,000 each.	Total Production in each Province.	Production in Cities and Towns as a Percentage of Total Production in each Province.

The five chief manufacturing cities of Canada are Montreal, Toronto, Hamilton, Winnipeg and Vancouver. Statistics showing the trend of production in these cities during the latest five years for which the figures are available are given in Table 36. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully occupied population was employed in manufacturing, as compared with 28 p.c. in Toronto, 27 p.c. in Montreal, 18 p.c. in Winnipeg and 16 p.c. in Vancouver.

Thirteen other important cities with a gross production of manufactured goods of over $15,000,000 in 1932 were as follows in descending order of the value of their products: London, Kitchener, Quebec, Sarnia, Montreal East, Calgary, Ottawa, Oshawa, Peterboro, Three Rivers, Walkerville, East Windsor and Brantford. Statistics of manufactures of cities and towns with a gross production of $1,000,000 and over and with three or more establishments are given for 1932 in Table 37.

36.—Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1929-33.

NOTE.—For comparable figures for the years 1922-28 the reader is referred to p. 467 of the 1933 Year Book. Statistics for 1932 and 1933 do not include central electric stations.

CHAPTER XV.—CONSTRUCTION.

Construction is the most conspicuous example of a great industry carried on in almost complete dependence on a local demand. The building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed on account of the increasing substitution of reinforced concrete for wood and brick construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of the men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

Relation of Construction Industry to General Business Conditions.—Statistics showing activity in construction are of particular interest both to those engaged in the industry itself and to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913, construction, mainly financed with borrowed money, contributed in large measure to produce the "boom" of those years, as is indicated in the figures of Table **1.**

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table **4.** The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-war years, but the peak of the inflation cycle in 1929 is reflected in the highest value of construction contracts on record, aggregating $576,651,800, exceeding 1928 by no less than $104,619,200 and the former peak year, 1912, by $113,568,800. This was followed by consistent declines.

In 1933 the total value of construction contracts awarded had declined to $97,289,800, which was $35,582,600 or 26·8 p.c. less than in 1932, and constituted a decline of $479,362,000 or 83·1 p.c. from the peak in 1929. In 1934, however, the value of the contracts awarded advanced to $125,811,500, a gain of $28,521,700 or 29·3 p.c. over 1933, but still $450,840,300 or 78·2 p.c. under the high point of 1929. (See Table **2.**)

Construction in Transportation and Public Utility Industries.—The expenditures by railways during 1933 were greatly curtailed; "maintenance of way and structures" was less than half of what it was in 1928, amounting to only $48,226,441, and "maintenance of equipment" was reduced to $47,962,504, or to 47 p. c. of the peak year 1928. Expenditures on new lines and additions and betterments were practically eliminated, amounting to only $208,671 and $107,684 respectively, whereas during 1926-31 they averaged $24 million and $59 million respectively.

Only 0·4 miles of new line were opened for operation during 1933 and 82 miles were closed. At the end of 1933 there were 291 miles of line completed but not opened to traffic and 346 miles of line under contract. Total track mileage in 1933 was 56,698 miles as against 57,023 miles in 1932.

Maintenance expenditures on electric railways have also decreased since 1929, owing to several railways ceasing operation and to retrenchments on the part of the operating lines. In 1933 "maintenance of way and structures" amounted to $2,300,709 and "maintenance of equipment" to $2,766,888. The cost of materials used by steam railways for construction purposes was $17,574,793 and by electric railways $515,274.

The pole line mileage of telegraph systems increased up to 53,228 miles in 1931, but decreased in 1932 and again in 1933 to 52,112 miles, while wire mileage was also reduced in these two years. During 1932 $1,228,660 was expended on construction work but in 1933 only $843,973 was so expended.

Telephone systems spent little on new construction in 1933 and the credits for reductions in lines more than offset the debits by $363,701. The total number of poles purchased during the year amounted to 50,813, at a cost of $147,144. The pole line mileage decreased from 220,459 in 1932 to 219,753, but the wire mileage increased from 5,089,261 miles to 5,134,871 miles.

Expenditures by central electric stations during 1933 on construction amounted to $3,250,940 as against $2,775,687 in 1932.

Contracts Awarded.—A record of contracts awarded during the years 1911-34, as compiled by MacLean Building Reports, Ltd., is given in Table **1.** The aggregate for 1934 is 78 p.c. less than that for the record year 1929. It is, however, an improvement over 1933, which was the lowest figure since 1917, when new construction was largely suspended on account of the War. Immigration was exceptionally great in 1912 and an extensive building program was necessary to care for the rapidly growing population; railway construction was also very active. In 1928 the high level was largely accounted for by residential building and industrial contracts were considerably ahead of 1927. Although residential construction declined in 1929, the tremendous increase in engineering construction and the significant advances in building for business purposes combined to make the record total. It will be observed from Table **2** that construction for all purposes has declined greatly since then to the low levels recorded in 1933 and 1934.

1.—Summary of the Value of Construction Contracts Awarded in Canada, 1911-34, as Compiled by MacLean Building Reports, Ltd.

Year.	Value of Construction Contracts.	Year.	Value of Construction Contracts.
	$		$
1911	345,425,000	1923	314,254,300
1912	463,083,000	1924	276,261,100
1913	384,157,000	1925	297,973,000

Building Permits.—The estimated value of construction in 61 cities of Canada, as indicated by their building permits, is shown for the years 1929 to 1934 inclusive in Table **3**. These cities had in 1931 about 36 p.c. of the population of Canada, while their 1934 building permits aggregated $27,457,524 or 21·8 p.c. of the total contracts awarded, as shown in Table **1**. In Table **3**, the 35 cities for which statistics of building permits are available since 1910 are indicated by an asterisk (*), and the totals for these cities are given beneath the totals for the larger group.

Table **4** shows the value of the building permits issued by 35 cities in the years 1910-34. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910 as compiled by the Department of Labour are also given. These indexes show as far as possible the fluctuations in building costs with their effect upon construction work and employment. At various

times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63·6 p.c. for materials and 36·4 p.c. for labour. The reduction in the cost of building operations in the past few years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages. Index numbers of wages in the building trades are based chiefly on union rates in cities, and the types of construction which have been stimulated have been those where the more highly paid trades have not been in great demand. The reduction in common labour costs has been proportionately greater than in the trades. The considerable gain in the index of employment in construction is due partly to a greater volume of public works undertaken as an unemployment relief measure, but there has also been an improvement in general building, as reflected in the value of the contracts awarded and of building permits issued in 1934.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1934 as shown in Table 2 increased by 29·3 p.c. compared with 1933 and the building permits of 61 cities in Table 3 increased by 26·1 p.c.

3.—Values of Building Permits Taken Out in 61 Cities for the calendar years 1929-34.

NOTE.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

The index numbers of wages and wholesale prices of materials in Table 4 show the fluctuations in building costs over the period 1910-34. During 1934 the wages index declined by 2 p.c. as compared with 1933, but there was a moderate increase in the index of wholesale costs of building materials. As already stated on p. 514, the general decline in the cost of building in the past few years has probably been much more than is indicated by these index numbers.

The increase in the volume of employment afforded in the construction industries during 1934, as compared with 1932 and 1933, is mainly due to the important program of public works undertaken as an unemployment relief measure, although there was also greater activity in general building work, as reflected in the higher value of contracts awarded and of building permits issued.

CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; Canada's position in international trade; main historical tables and tables showing current trends (Tables **1** to **21**); and comparison of the volumes of imports and exports (Table **22**). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

Section 1.—The Development of Tariffs.

An outline of the development of tariffs as affecting Canada naturally falls into two divisions: first, a historical sketch showing the various phases of Canadian trade which have influenced tariff development; and second, the present tariff conditions under which Canadian trade is carried on.

Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies and commerce". Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders from England, Scotland and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New

England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in Great Britain had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

The Abolition of Preference and the Reciprocity Treaty of 1854.—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between the United Kingdom and the United States during the Civil War period and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated and ceased to operate 12 months later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

Tariff Policy since Confederation.—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became conterminous with British North America, the area of internal

free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to 17½ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from 17½ p.c. to 20 p.c., the rates on cotton goods from 17½ p.c. to rates, specific and *ad valorem*, equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods and woodenware, to 25 p.c. Pig iron, previously free, now paid $2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and 17½ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder twine, barbed wire, pig iron, flour and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This "reciprocal" tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India, while Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the "reciprocal" tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the "reciprocal" tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by the United Kingdom of her most-favoured-nation treaties with Germany and Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of 33⅓ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

Subsection 2.—Preferential Tariff and Trade Treaties.*

Tariff of 1907 and Empire Preferences.—A new Canadian Customs Tariff was adopted on April 12, 1907, containing three columns of duties, British preferential, intermediate and general. This tariff with amendments is still in operation. The Tariff Act itself mentions, as being entitled to the British preference, those parts of the Empire which were already enjoying it under previous measures, namely: United Kingdom, British India, Ceylon, New Zealand, Union of South Africa, Southern Rhodesia, Bermuda, British West Indies, British Guiana and Straits Settlements. Power was taken to extend the same advantages, by Order in Council, to other parts of the Empire. Under this authority the British preference was, on Jan. 25, 1913, granted to: Swaziland, Basutoland, Bechuanaland Protectorate, Northern Rhodesia, Nyasaland Protectorate, Uganda Protectorate, East Africa Protectorate, Protectorate of Northern Nigeria, Colony and Protectorate of Southern Nigeria, Gold Coast, Sierra Leone, Gambia, Somaliland Protectorate, Federated Malay States, British North Borneo, Sarawak, Brunei, Mauritius and Dependencies thereof, Seychelles, St. Helena, Ascension, Friendly or Tonga Islands, Fiji, Falkland Islands and British Honduras. Further extensions were to: Irish Free State, Sept. 21, 1923; Territory of Western Samoa, Oct. 1, 1924; Newfoundland, June 26, 1928; Tanganyika Territory, Dec. 19, 1930; Channel Islands, Isle of Man, Kenya Colony and Protectorate (formerly East Africa Protectorate), Colony and Protectorate of Nigeria, (formerly Protectorate of Northern Nigeria and Colony and Protectorate of Southern Nigeria), British Sphere of the Cameroons, British Sphere of Togoland, part of New Guinea under mandate of Australia, and Cyprus, all on Sept. 24, 1931; Unfederated Malay States, June 28, 1933; Cayman Islands, July 27, 1933; Australia, July 7, 1934 (on all products except butter, raisins, dried currants, wheat and wheat flour).

Trade Agreements with Australia.—A formal Trade Agreement between Canada and Australia (superseding an arrangement of 1925, exchanging limited preferences by legislation) was brought into force on Aug. 3, 1931, providing for exchange of British preferential rates, except as set forth in two schedules—one of which concedes special Canadian rates on some Australian products, while the other specifies the tariff treatment given by Australia to Canada on certain items, as well as enumerating items which Australia reserves as regards granting preferential treatment. Canada is accorded the British preferential tariff of Australia on all but 18 of the 439 items comprising the entire tariff. On six items intermediate rates apply and on the other twelve, the general tariff. An important concession to Canada is the creation of new or larger margins of preference than existed in the former tariff on some products of importance to Canada. Other general provisions waive anti-dumping laws, and permit either country to apply its general tariff rates to imports from the other which are injuriously affecting the sale of similar domestic goods, provided that, after three months notice, the exporting country has failed to remedy the situation.

Trade Agreements with British West Indies.—To the British West Indies concessions independent of the British preference were made in an Agreement of 1912, which obtained West Indian preferential rates of four-fifths of the general tariff on some Canadian goods. In 1920 a second Trade Agreement, broader both as to the extent of the preferences exchanged and the number of West Indian signatories, superseded the first. This in turn was replaced on July 6, 1925, by one

* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

still more extensive, brought formally into force by proclamation as from April 30, 1927. It is binding for a 12-year period and thereafter until terminated on a years notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana and British Honduras. The larger colonies give a preference of 2s. per brl. on flour, and various stated amounts on some other commodities of importance. The preference on manufactured goods in general, when not specially dealt with, ranges from 20 p.c. to 50 p.c. of the general tariff. In return Canada grants the colonies: (a) specific amounts of preference on sugar and some other selected tropical products; (b) a 50 p.c. reduction from the general tariff on goods for which no special provision is made.

Trade Agreement with New Zealand.—Imports from New Zealand have been accorded British preferential rates since 1904. Furthermore, on Oct. 1, 1925, the special rates of the Trade Agreement with Australia were extended to New Zealand. Canada was granted the British preferential rates of New Zealand established in 1903. However, from Oct. 12, 1930, after due notice, Canada withdrew the Australian treaty rates as regards imports from New Zealand, and on June 2, 1931, New Zealand withdrew her British preferential rates from all but a few items of Canadian goods. After negotiations a new Trade Agreement with New Zealand was brought into force for one year by proclamation as from May 24, 1932. On May 24, 1933, the Agreement was extended for six months; on Nov. 24, 1933, for another six months; and on May 24, 1934, for a further 12 months. By this Agreement Canada grants New Zealand rates lower than British preferential on various articles of outstanding interest to her, and otherwise extends to her the British preferential tariff. New Zealand restores the British preferential rates to Canada except on six items on which, however, she concedes rates lower than the general tariff. On lumber, laths, and shingles, where no preference existed previously, because the general and preferential rates were the same, New Zealand creates a differential between her British preferential and general tariffs, so as to afford Canada a tariff preference on such products. Under a general provision of the Agreement anti-dumping laws of both countries are suspended except in the case of imports injurious to domestic industry when the exporting country does not apply remedial measures after 30 days notice. Other general provisions extend the Agreement to Western Samoa and Cook Islands.

Preferences by The United Kingdom Prior to the Imperial Conference, 1932.—The United Kingdom, between 1919 and 1931, granted preferences to Empire products within the limited scope of her tariff of that time. By 1931 there were preferences on: motor cars, clocks and watches, musical instruments, cinematograph films, all known as "McKenna duties"; sugar, goods containing sugar, glucose, tobaccos, certain dried fruits, chicory, cocoa, coffee, hops, spirits, wines, silk and artificial silk goods; pottery, buttons, household hollow-ware (safeguarding duties); and on "key industry goods" mainly certain chemicals, optical instruments, arc lamp carbons, vacuum tubes, metallic tungsten, some scientific instruments and scientific glassware. In consequence of the Abnormal Importations (Customs Duties) Act, passed Nov. 20, 1931, to remain in effect for six months, giving authority for Orders in Council imposing duties, not to exceed 100 p.c. *ad valorem*, on foreign manufactured goods, some 50 items were subjected to 50 p.c. *ad valorem*. The Horticultural Products (Emergency Customs Duties) Act, passed Dec. 11, 1931, to remain in force for twelve months, gave the Government power to impose duties by Orders in Council up to 100 p.c. *ad valorem* on certain fresh fruit, fresh vegetables and

plants of non-Empire origin. Five Orders were passed under this Act. The Import Duties Act effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on goods which were not otherwise subject to duty except for some exemptions including wheat and maize (afterwards made dutiable), meats (not including canned), live animals, raw cotton, flax and hemp, wool, hides and skins, newsprint, pulp, wooden pit-props, metallic ores, coal and certain other minerals, unwrought copper and all goods imported for shipbuilding. Products of the Dominions, India, and Southern Rhodesia were exempt from this duty until Nov. 15, 1932, their treatment after that date to depend on the Imperial Conference. Products of other parts of the British Empire were exempt from the 10 p.c. duty without limitation as to date. By an Order effective April 26, 1932, the 10 p.c. general tariff was increased to rates ranging from 15 to 33⅓ p.c. *ad valorem*, on a wide range of merchandise, chiefly manufactured goods. Over 100 subsequent orders have been issued either increasing rates on particular commodities or exempting articles from duty.

The Imperial Economic Conference, 1932.—*The United Kingdom-Canada Agreement.*—Under this Agreement the United Kingdom, while continuing to grant to products of Canada those preferences and exemptions from duty established by the Import Duties Act cited above, provided, for important Canadian products, additional preferences by the imposition of new or increased duties on competing foreign imports. Chief among these products were: eggs, butter, cheese, condensed milk, wheat, fresh and canned apples, and unwrought copper. The continuation of a 10 p.c. preference was guaranteed on dutiable timber, fresh and canned fish, asbestos, lead and zinc. Canada was granted unrestricted entry for a maximum quota of 2,500,000 cwt. per annum of bacon and hams, and for 10 years a margin of preference of 2s. ½d. per lb. on unmanufactured tobacco. Certain preferences accorded in United Kingdom Agreements with other Dominions apply automatically to Canada as an Empire country. As regards eggs, poultry, butter, cheese and other milk products, free entry is guaranteed for three years, after which the position as regards these articles is subject to review. Increased preferences to Canada in many of the non-self-governing Colonies and Protectorates were provided for on selected articles. The British reserved the right to remove duties on foreign wheat, copper, lead and zinc if at any time Empire producers were unwilling or unable to provide, at world prices, the United Kingdom requirements. In return Canada agreed to widen the margin of preference on imports from the United Kingdom on a great variety of goods as set forth in a schedule attached to the Agreement. Actual changes were made in 225 Canadian tariff items, on 223 of which the margin of the British preference was increased. The tariff was lowered on 133 items, more than half of which were placed on the free list, in the other cases the margin was increased by raising the intermediate and general tariffs. By major groups, the tariff changes mainly concerned iron and steel, drugs and chemicals, textiles, leather goods, glass, vegetable oils, as well as a wide list of miscellaneous commodities. Generally speaking manufactured goods of a class or kind not produced in Canada were made free. Additional preferences were also provided for imports into Canada of various commodities produced largely in the non-self-governing Colonies and Protectorates. Canada agreed that the tariff should be based on the principle that protective duties should not exceed such a level as would give United Kingdom producers full opportunity of reasonable competition in Canada on the basis of the relative cost of economic and efficient production with special consideration to be given to industries not fully established. Canada undertook to institute the Tariff Board, already

authorized by Statute, to review duties on United Kingdom goods in accordance with these principles and not to increase these duties except in accordance with the Board's findings. Canada further agreed to abolish surcharges on imports from the United Kingdom as soon as Canada's finances would allow and to give sympathetic consideration to the abolition of the exchange dumping duty on British goods. (By an amendment to the special War Revenue Act, Canada on June 28, 1934, reduced an Excise Tax of 3 p.c. levied on duty-paid value to 1½ pc. as regards goods entered under the British preferential tariff or trade agreements with a British country.) The Agreement was to continue for 5 years and be subject thereafter to termination upon 6 months notice by either party.

Other Agreements.—The Agreement between Canada and the Union of South Africa places commercial relations between these two Dominions on a treaty basis for the first time. It covers the principal commodities which each Dominion can sell to the other, but is more limited in scope than the trade Agreements concluded earlier with Australia and New Zealand. A considerable extension of the preferred list of commodities has been obtained for Canada. Special consideration has been given to corn from South Africa, although fruits in certain seasons, peanuts, sugar and molasses are also given consideration. Wheat, flour, apples, hoisery, binder twine, machinery, vacuum cleaners, iron pipes, tools, shooks, lumber, canned fish, motor cars, electrical appliances, rubber goods and paper products are the chief items on which concessions are made to Canada.

The Agreement with the Irish Free State secured for all goods the produce and manufacture of Canada imported into the Irish Free State the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce of the Irish Free State, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

The Agreement with Southern Rhodesia made provision for the exchange of preferential treatment on selected lists of commodities. In addition, other goods not enumerated in the schedules continue to enjoy the benefits of existing and future British preferences. Indian corn, citrous fruits and peanuts are given free entry by Canada, whereas Southern Rhodesia gives our manufacturers important concessions on cream separators, batteries, boots and shoes, and paper products.

Other Empire Preferences on Canadian Goods.—Even in the absence of trade agreements many tariff preferences are accorded to Canadian goods throughout the Empire. The general position now is that nearly all goods, the produce or manufacture of Canada, shipped in accordance with prescribed regulations, are granted tariff preferences over non-Empire goods in Great Britain and Northern Ireland, Australia, New Zealand, Fiji, Western Samoa, British West Indies (thirteen tariffs), Bermuda, British Guiana, British Honduras, Southern Rhodesia, Northern Rhodesia (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, Cyprus, and Isle of Man. To a considerable extent tariff preference is similarly granted to Canadian goods in the Irish Free State, the Union of South Africa, Ceylon, Mauritius, St. Helena, British Protectorate of Tonga, British Solomon islands, Gilbert and Ellice Islands, and Malta, also on some goods in the Federated Malay States, the Unfederated Malay States, British North Borneo, Sarawak, and Brunei. Empire motor cars enjoy preference in Hong Kong, the Straits Settlements, and Guernsey; spirits and malt liquors in Gibraltar; and wines in the Falkland Islands.

Canadian Tariff Arrangements with Foreign Countries.—Arising out of some old British treaties, later British treaties or favoured-nation clauses sanctioned by Canadian Acts of Parliament, or in consequence of purely Canadian conventions of commerce, Canada extends, on a reciprocal basis, most-favoured-nation customs treatment, except where otherwise indicated, to the goods of the following countries:—

Country.	Treaty or Convention.	Terms.
Argentine Republic	Treaty of Amity, Commerce and Navigation with the United Kingdom of Feb. 2, 1825	Exchange of most-favoured-nation treatment.
Austria	Exchange of Notes. Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, latter for an indefinite period subject to termination on three months' notice	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Austria.
Belgium and Luxembourg, Belgian colonies, possessions and mandated territory	Convention of Commerce with Canada of July 3, 1924	Exchange of most-favoured-nation treatment.
Brazil	Exchange of Notes of Dec. 4, 1931	Canadian intermediate tariff exchange for most-favoured-nation treatment in Brazil.
Colombia	Treaty of Friendship, Commerce and Navigation with the United Kingdom of Feb. 16, 1866	Exchange of most-favoured-nation treatment.
Czechoslovakia	Convention of Commerce with Canada of Mar. 15, 1928	Exchange of most-favoured-nation treatment.
Denmark	Treaties of Peace and Commerce with Great Britain of Feb. 13, 1660-1 and July 11, 1670	Exchange of most-favoured-nation treatment.
Estonia	Canadian Trade Agreements Act of June 11, 1928, accepted Article 28 of United Kingdom-Estonia Treaty of Commerce and Navigation of Jan. 18, 1926	Exchange of most-favoured-nation treatment.
Finland	Finland Trade Agreement Act of June 12, 1925, accepted Article 23 of United Kingdom-Finland Treaty of Commerce and Navigation of Dec. 14, 1923	Exchange of most-favoured-nation treatment.
France and French Colonies	Trade Agreement with Canada, signed May 12, 1933, in force June 10, 1933. Exchange of Notes, Sept. 29, 1934, extending concessions on both sides	As regards scheduled goods percentage reductions from Canadian intermediate tariff or actual intermediate exchanged for French minimum tariff or percentage reductions from general tariff, also quota arrangements.
Germany	Exchange of Notes. Canadian Orders in Council, Dec. 23, 1932; Mar. 31, 1933; Dec. 23, 1933, latter for an indefinite period subject to termination any time on condition that benefits of Agreement continue for six weeks after notice given	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Germany.
Hungary	Canadian Trade Agreements Act of June 11, 1928, accepted Article 20 of United Kingdom-Hungary Treaty of Commerce and Navigation of July 23, 1926	Exchange of most-favoured nation treatment.
Italy, colonies and possessions	Convention of Commerce with Canada of Jan. 4, 1923	Exchange of most-favoured-nation treatment.
Japan	Japanese Treaty Act of April 10, 1913, sanctioned (with provisos) United Kingdom-Japan Treaty of Commerce and Navigation of April 3, 1911.	Exchange of most-favoured-nation treatment.
Latvia	Canadian Trade Agreements Act of June 11, 1928, accepted Article 26 of the United Kingdom-Latvia Treaty of Commerce and Navigation of June 22, 1923	Exchange of most-favoured-nation treatment.
Lithuania	Canadian Trade Agreements Act of June 11, 1928, accepted Article 4 of the United Kingdom-Lithuania Agreement respecting commercial relations of May 6, 1922	Exchange of most-favoured-nation treatment.
Netherlands, Netherlands Indies, Surinam and Curaçao	Convention of Commerce with Canada of July 11, 1924	Exchange of most-favoured-nation treatment.
Norway	Convention of Commerce and Navigation between the United Kingdom and (Sweden and) Norway of Mar. 18, 1826	Exchange of most-favoured-nation treatment.

Country.	Treaty or Convention.	Terms.
Portugal, including Madeira, Porto Santo, and Azores	Canadian Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom-Portugal Treaty of Commerce and Navigation of Aug. 12, 1914	Exchange of most-favoured-nation treatment.
Roumania	Exchange of Notes of Sept. 30, 1930, under Article 36, Treaty of Commerce and Navigation between United Kingdom and Roumania of Aug. 6, 1930	Exchange of most-favoured-nation treatment.
Serb-Croat-Slovene Kingdom (Yugoslavia)	Canadian Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom—Serb-Croat-Slovene Kingdom Treaty of Commerce and Navigation of May 12, 1927	Exchange of most-favoured-nation treatment.
Spain	Spanish Treaty Act of June 11, 1928, sanctioned United Kingdom-Spain Treaty of Commerce and Navigation of Oct. 31, 1922 (revised April 5, 1927), also United Kingdom-Spain Agreement of June 27, 1924, regulating treatment of companies	Exchange of most-favoured-nation treatment.
Sweden	Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1826.	Exchange of most-favoured-nation treatment.
Switzerland	Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855	Exchange of most-favoured-nation treatment.
Venezuela	Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of April 18, 1825	Exchange of most-favoured-nation treatment.

Under mutual most-favoured-nation customs treatment each contracting country accords to the goods of the other the lowest duties applied to similar products of any foreign origin, unless there are reservations. These reservations would be tariff concessions, not considered of relatively great importance, which one country may grant to another on historical, geographical, or some related ground. Most-favoured-nation obligations do not include Canadian preferences given to other parts of the Empire. Canada's concessions to France in the Convention of Commerce of 1922 established the rates applicable to most-favoured foreign nations. This Convention expired on June 16, 1932. A new Trade Agreement between Canada and France, signed on May 12, 1933, went into force on June 10, 1933, and was followed by an Exchange of Notes on Sept. 29, 1934, extending concessions on both sides. Benefits to most-favoured nations under the Canadian tariff now consist of the rates of the intermediate tariff because they are granted by Agreements to Brazil, Germany and Austria, and in addition any rates lower than intermediate existing in the Trade Agreement between Canada and France.

The value to Canada of most-favoured-nation treatment in foreign countries depends on the customs system of the country concerned. Several countries have maximum and minimum schedules, meaning that there are reduced duties for practically all goods imported from reciprocating or treaty countries. Some countries, on account of rates conceded in treaties, maintain reduced duties on specified items of their tariffs. Many countries throughout the world have uniform tariffs regardless of the origin of the goods. The benefit of most-favoured-nation treatment depends also on the extent to which tariff favours apply to countries competing with Canada in the market in question.

Powers of the Governor in Council.—The Governor in Council may make reductions of duties on goods imported into Canada from countries granting reductions on Canadian products.

The Governor in Council is given power to prohibit the importation of any goods exported directly or indirectly from any country not a contracting party to the Treaty of Versailles executed at Paris, France, on June 28, 1919.

In the event of producers of goods taking advantage of any duty under the provisions of the customs tariff, the Governor in Council is empowered to reduce or remove such duty and, where a producer violates the provisions of Sec. 17, to impose upon all his products an excise duty equivalent to the amount of customs duty which would be paid by such goods if imported under the provisions of the general tariff. These provisions, however, do not apply to agricultural products.

Combination.—Whenever it is deemed in the public interest to inquire into any combination alleged to exist detrimental to consumers, the Governor in Council may commission or empower any judge of the Supreme Court or of the Exchequer Court of Canada, or of any superior court or county court in Canada, to hold an inquiry in a summary way and to report to the Governor in Council whether such combination exists, the judge being empowered to compel attendance of witnesses, examine them under oath, and require production of books and papers, etc., and, upon the judge reporting the existence of such a combination, the Governor in Council is given authority to admit the article concerned free of duty, or so reduce the duty thereon as to give the public the benefit of reasonable competition if it appears that the disadvantage to the consumer is facilitated by the duties of customs imposed on a like article.

Section 2.—The Commercial Intelligence Service.*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

Organization at Ottawa.—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Trade Inquiries—where inquiries for Canadian products, forwarded by the Trade Commissioners, are prepared for publication and distribution, and the Exporters Directory listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal Products; Wood and Vegetable Products; Minerals, Metals and Chemicals; and Fish Products and Miscellaneous Manufactures. These last five divisions handle correspondence falling within their respective classifications.

* Revised by L. D. Wilgress, Director, Commercial Intelligence Service, Department of Trade and Commerce.

Also, in order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

Organization Abroad.—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office and cable address of the Trade Commissioner in each case, is given below:—

CANADIAN GOVERNMENT TRADE COMMISSIONERS.

NOTE.—This list revised as at Jan. 1, 1935. Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

Argentine Republic (Territory includes Uruguay)	H. A. Scott, B. Mitre 430, Buenos Aires (1).
Australia	L. M. Cosgrave. Address for letters—Box 196c, G.P.O. Melbourne. Office—Safe Deposit Building, Melbourne. Commercial Agent—B. Millin, The Royal Exchange, Sydney, N.S.W.
Belgium	Henri Turcot, 98 Boulevard Adolphe Max, Brussels.
Brazil	L. S. Glass. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office—Ed. Da "A Noite", Sala 802, Praca Maua.
British Malaya (Territory includes the Straits Settlements, the Federated and Unfederated Malay States, British Borneo, Northern Sumatra and Siam)	Acting Trade Commissioner, Union Building, Singapore, Straits Settlements.
British West Indies—	
Trinidad (Territory includes Barbados, Windward and Leeward islands and British Guiana)	Acting Trade Commissioner. Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Bank Building.
Jamaica (Territory covers Jamaica, Haiti, the Bahamas, and British Honduras)	F. W. Fraser, P.O. Box 225. Office—Canadian Bank of Commerce Chambers, Kingston.
China—	
Shanghai	Acting Trade Commissioner. P.O. Box 264, Shanghai. Office—Ewo Building, 27 The Bund, Shanghai.
Tientsin (Territory includes North China and Manchuria)	C. S. Bissett, Hong Kong and Shanghai Banking Corporation Building.
Cuba (Territory includes Dominican Republic and Puerto Rico)	E. L. McColl. Address for letters—Apartado 1945, Havana. Office address—Royal Bank of Canada Building, Calle Aguiar 75, Havana.
New Zealand (Territory includes Fiji and Western Samoa)	C. M. Croft. Address for letters—P.O. Box 33, Auckland. Office—Yorkshire House, Shortland Street, Auckland.
Norway (Territory includes Scandinavian countries and Finland)	A. S. Bleakney, Stortingsgaten 28, Oslo.
Panama (Territory includes the Canal Zone, Venezuela, Colombia, Nicaragua and Costa Rica)	J. A. Strong. Address for letters—P.O. Box 222, Panama City. Office—Royal Bank of Canada Building, Santa Ana Plaza, Panama City.
Peru (Territory includes Bolivia, Chile and Ecuador)	Acting Trade Commissioner. Address for letters—Casilla 1212, Lima. Office—Portal de Belen No. 166, Plaza San Martin, Lima.
South Africa—	
Cape Town (Territory includes Cape Province and Southwest Africa, Natal, Tanganyika, Kenya, Uganda, Mauritius and Madagascar)	G. R. Heasman. Address for letters—P.O. Box 683, Cape Town. Office—Cleghorn and Harris Building, Adderley Street, Cape Town. Cable address—Cantracom.
Johannesburg (Territory includes Transvaal, Orange Free State, Bechuanaland, Somaliland, the Rhodesias, Portuguese East Africa, Mozambique and Nyasaland)	J. L. Mutter. Address for letters—P.O. Box 715, Johannesburg. Cable Address—Cantracom.
United Kingdom—	
London	Frederic Hudd, Chief Trade Commissioner in the United Kingdom, Canada House, Trafalgar Square, S.W. 1. Cable Address—Sleighing, London.
London (Territory covers Home Counties, Southeastern Counties, and East Anglia)	J. H. English, Canada House, Trafalgar Square, S.W.1.

CANADIAN GOVERNMENT TRADE COMMISSIONERS—concluded.

London (Territory—for fresh fruit only—covers United Kingdom, Norway, Denmark, Sweden, France, Holland, Belgium and Germany)	W. B. Gornall, Fruit Trade Commissioner, Aldine House, Bedford Street, Strand, W.C. 2. Cable address—Canfrucom.
London	W. A. Wilson, Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address—Agrilson.
Liverpool (Territory covers North of England, Lincolnshire, North Midlands and North Wales)	H. R. Poussette, Century Bldgs., 31 North John Street.
Bristol (Territory covers West of England, South Wales and South Midlands)	Frederick Palmer, Northcliffe House, Colston Ave.
Glasgow	G. B. Johnson, 200 St. Vincent Street. Cable address—Cantracom.
Egypt (Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Persia, Greece, Turkey, Bulgaria and Roumania)	Yves Lamontagne. Address for letters—P.O. Box 1770, Cairo. Office—22 Shari Kasr el Nil, Cairo.
France (Territory includes French Colonies in North Africa)	Hercule Barré, Commercial Attaché, 3 rue Scribe, Paris (9). Cable address—Cancomac.
Germany (Territory covers Germany—except the Rhine Valley—Czechoslovakia, Austria, Hungary, Poland, Lithuania, Latvia and Estonia)	Paul Sykes. Mönckebergstrasse 31, Hamburg.
Hong Kong (Territory includes South China, the Philippines and Indo-China)	V. E. Duclos. Address for letters—P.O. Box 80, Hong Kong. Office—Gloucester Building, Hong Kong.
India and Ceylon	R. T. Young. Address for letters—P.O. Box 2003, Calcutta. Office—23 Esplanade Mansions, Government Place East, Calcutta.
Irish Free State and Northern Ireland	James Cormack, 66 Upper O'Connell Street, Dublin, Irish Free State; and 44 Ann Street, Belfast, Northern Ireland. Cable address—Adanac.
Italy (Territory includes Spain, Portugal, Gibraltar, Malta, Albania and Yugoslavia)	A. B. Muddiman, Via Manzoni Nr. 5, Milan (102).
Japan—	
Tokyo	J. A. Langley, Commercial Secretary. Address for letters—P.O. Box 401, Tokyo Central. Office—Canadian Legation, 16 Omotecho, 3-chome, Akasakaku, Tokyo.
Kobe	Richard Grew. Address for letters—P.O. Box 230, Kobe. Office—309 Crescent Building, 72 Kyomachi.
Mexico (Territory includes Guatemala, Honduras and Salvador)	M. B. Palmer. Address for letters—Apartado Num. 126-bis, Mexico City. Office—Edificio Banco de Londres y Mexico, Num. 30, Mexico City. Cable address—Cancoma.
Netherlands (Territory includes the Rhine Valley and Switzerland)	J. C. McGillivray, Beursplein 26B, Rotterdam.
Netherlands Indies	Acting Trade Commissioner. Address for letters—P.O. Box 84, Batavia, Java. Office—Chartered Bank Building, Melacca St., Batavia, Java. (This office is administered as a branch of that at Singapore—see under British Malaya.)
United States—	
New York City. (Territory includes Bermuda).	D. S. Cole, 25 Broadway. Cable address—Cantracom.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

Commercial Intelligence Journal.—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is $1 per annum in Canada and $3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

Section 3.—Statistics of External Trade.*

NOTE.—For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind.

Fiscal Years.—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

Quantities and Values.—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means "Imports entered for consumption". "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling, and profit. (See Sections 35 to 45 of the Customs Act.)

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Section 55 of the Customs Act and Orders in Council respecting currency valuations.)

Canadian Exports: Valuation.—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, flour ground from imported wheat, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

Foreign Exports: Valuation.—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transhipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

*Revised by W. A. Warne, Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report of the Trade of Canada, the Condensed Preliminary Report of the Trade of Canada (annual), the Quarterly Report of the Trade of Canada, the Calendar Year Report of the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of this Branch see Chapter XXIX, Section 1, under "External Trade".

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transhipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. Thus about 14 p.c. of Canada's exports to overseas countries are shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are to a large extent routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be $100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States' grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, published by the Dominion Bureau of Statistics.

Subsection 1.—Historical Statistics of Canadian Trade.

A general view of the trade of Canada in the fiscal years from 1868 to 1934 is furnished in Table **1** (p. 554), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past 14 years, re-exports of foreign products from bonded warehouses have no longer been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. From 1915 to 1929, except in the fiscal year ended Mar. 31, 1921, there was an annual excess of total exports over imports entered for consumption. In the fiscal years ended Mar. 31, 1930 and 1931, however, there was an excess of imports which was changed to an excess of exports for the latest three years.

The percentage of exports to imports rose to a peak of 164·6 in 1918, owing to the exportation of war supplies, then dropped to 97·6 in 1921, rose again to a post-war high of 143·3 in 1926 and has since declined to 109·7 in 1929, 91·7 in 1930 and 90·1 in 1931, but rose to 101·6 in 1932, 118·3 in 1933 and 135·0 in 1934.

The values of coin and bullion imported and exported are shown in Table 3, the later figures including much new Canadian gold refined at the Mint. Amounts collected in export duties from 1868 to 1892, and in import duties from 1868 to 1934, together with the cost of collection expressed as a percentage of the total duties, are stated by years in Table 4. Tables 5 and 6 show, respectively, exports of Canadian produce and imports for home consumption from the United Kingdom, the United States and other countries since 1868. These figures show the overwhelming predominance of the two great English-speaking countries in our foreign trade; in the fiscal year ended Mar. 31, 1934, for example, 72·9 p.c. of our exports of domestic produce was shipped to these two countries, which, in the same year, together provided 79·1 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1934. The higher rates collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is largely due to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. This subject is treated in more detail at pp. 38-39 of the Condensed Preliminary Report on the Trade of Canada, 1934. Table 18 of this chapter shows the imports from Empire countries which entered Canada in 1934 at lower rates or free of duty under the preferential tariff.

Importations of important raw materials used in Canadian manufacturing industries are given in Table 9 for the fiscal years ended 1911 to 1934.

Subsection 2.—General Analysis of Current Import and Export Trade.

The external trade of Canada, like that of every other country in the world, declined considerably in volume and very greatly in value in the period of falling prices following the War. Thereafter it recovered and by 1929 had reached a value greater even than in the war period. The great world-wide depression which commenced in the autumn of 1929, however, was responsible for a very great reduction in the value, and a smaller reduction in the volume, of the trade of Canada and of every other country, the total value of our merchandise trade falling steadily

from $2,655,000,000 in the fiscal year ended Mar. 31, 1929 to $887,000,000 in the fiscal year 1933. The fiscal year ended 1934 saw the turn of the tide with a total merchandise trade of $1,019,000,000, further increased to $1,173,000,000 in the calendar year 1934.

The external trade of Canada during the year ended Mar. 31, 1934, was valued at $1,019,453,094, as compared with $887,097,541 in 1933 and $1,166,069,421 in 1932, showing an increase in 1934 of $132,355,553 or 14·9 p.c. over 1933, and a decrease of $146,616,327 or 12·6 p.c. from 1932. Imports as well as exports showed an increase in 1934 compared with the year 1933, the increase in imports amounting to $27,414,881 or 6·7 p.c., and in exports to $104,940,672 or 21·8 p.c. In this latest fiscal year the trade balance of the Dominion was favourable to the extent of $151,855,844, compared with a favourable balance of $74,330,053 in 1933, and of $9,061,613 in 1932. If the trade in merchandise and coin and bullion are added together the trade balance with the world in the fiscal year 1934 was favourable to the extent of $218,708,714, compared with a favourable balance of $130,883,312 in 1933 and of $75,101,389 in 1932. The place of these trade balances of merchandise and coin and bullion in the larger sphere of international payments is shown in Section 5 at the end of this chapter, pp. 637–639.

Statistical Tables of Current Trade.—Tables **10** to **18** (pp. 562–627) deal with the current trade statistics of the Dominion. Tables **10** and **11** are summary tables, showing by groups our trade with the United Kingdom, the United States and all countries, by values and percentages, for the latest four fiscal years. Table **12** shows the same in detail for exports and Table **13** for imports of all important articles. Table **14** shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1930-34. Table **15** shows imports and exports for the fiscal year ended 1934 by degree of manufacture and by origin, and Table **16** gives similar information on a classification according to purpose. Table **17** gives our imports and exports for the two latest years by ports and provinces, and Table **18** shows the values imported from different countries dutiable or free under the general, preferential and treaty rate tariffs in 1934.

Subsection 3.—Trade with the United Kingdom and the British Empire.

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending us capital on a considerable scale for those times, supplied us with more than half our imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for our exports, holding that position steadily from 1890 to 1920, while in certain of the more recent years the United States has been our largest customer. This latter tendency has again been reversed, however, owing on the one hand to the increasingly restrictive tariff legislation of the United States after 1920 and to the preferences granted to Canada and other Empire countries by the United Kingdom in 1932.

As regards our imports, on the other hand, the United States, though in the beginning ranking second in supplying our wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82·3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined to 54·9 p.c. in 1934. Our imports from the United Kingdom, which fell as low as 8·0 p.c. of the total in 1919, fluctuated between 15·2 p.c. and 19·0 p.c. between 1921 and 1930, but rose from 15·2 p.c. in the latter year to 24·2 p.c. in 1934. Thus in four years the United Kingdom's share of our import trade has risen from less than a sixth to nearly one-quarter. In the same period the percentage of our exports taken by the United Kingdom has risen from 25·2 to 39·3 or from one-quarter to two-fifths.

The following statement gives summary statistics of Canadian trade with the United Kingdom in the latest years. Commodity imports in 1934 showed an increase of $18,634,709 or 21·5 p.c. as compared with 1933, while exports of Canadian products to the United Kingdom showed an increase of $43,240,392 or 23·5 p.c.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in detail in Tables **12** and **13** of this chapter.

Trade of Canada with the British Empire.—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended by Order in Council from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. Australia receives special concessions under the Trade Agreement of 1931 and the British West Indies under the Agreement of 1925 referred to on p. 520. Table **18** on p. 627 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897 Canada's total imports from the United Kingdom amounted to only $29,401,000, compared with imports in 1887 valued at $44,741,000 and in 1873 at $67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by $38,596,000 or 56·7 p.c. After the

introduction of the British preferential tariff, the downward trend in the value of imports from the United Kingdom was reversed, but imports from the Empire were at a low level. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown a distinctly upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products.

In the interpretation of statistics covering a long period, such as those in Statement III following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which the recent serious decline has occurred. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as under:—

III.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

Subsection 4.—Trade with the United States and other Foreign Countries.

Trade with the United States.—In the period immediately following Confederation the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, we bought more from the United Kingdom than from the United States.

In the '70's, however, the proportion of our exports going to the United States, which had been over 50 p.c. in the first few years of the Dominion, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years, rising again to about 40 p.c. on the average of the nineteen-twenties.

Imports from the United States exceeded half of our total imports for the first time in the years from 1877 to 1879, while in the eighteen-eighties they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65·0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82·3 p.c. in 1918, and throughout the nineteen-twenties stood at about two-thirds of the total. In the most recent year, however, to some extent as the result of the Ottawa Agreements and the premium on United States funds, the percentage of imports coming from the United States has declined to 54·9 or approximately five-ninths of the total.

Analysis of Canada's Total Trade with the United States.—Canada's total merchandise trade with the United States in the fiscal year 1934 was valued at $437,538,613, compared with $381,077,886 in 1933, and $596,037,639 in 1932, the increase in 1934 over 1933 amounting to $56,460,727 or 14·8 p.c., but a decrease of $158,499,026 or 26·6 p.c. compared with 1932. Imports from the United States in 1934 were valued at $238,187,681, in 1933 at $232,548,055, and in 1932 at $351,686,775, the increase in 1934 compared with 1933 amounting to $5,639,626 or 2·4 p.c., but compared with 1932 the decrease was $113,499,094 or 32·3 p.c. The total exports to the United States in 1934 amounted to $199,350,932, in 1933 to $148,529,831, and in 1932 to $244,350,864, the increase in 1934 compared with 1933 amounting to $50,821,099 or 34·2 p.c., while compared with 1932 the decrease was $44,999,932 or 18·4 p.c. The domestic exports to the United States in 1934 amounted to $194,443,139, in 1933 to $143,160,400, and in 1932 to $235,186,674, the increase in 1934 compared with 1933 amounting to $51,282,739 or 35·8 p.c., but compared with 1932 the decrease was $40,743,535 or 17·3 p.c. The trade balance with the United States has been unfavourable to Canada in each year since 1882. For the year ended Mar. 31, 1934, Canada's unfavourable merchandise trade balance with the United States totalled $38,836,749, being less than for any fiscal year since 1901 (when it was $36,971,065). In 1929 the unfavourable trade balance with the United States amounted to $346,745,142, in 1930 to $310,753,856, in 1931 to $220,483,994, in 1932 to $107,335,911 and in 1933 to $84,018,224. If the trade in merchandise and coin and bullion are combined, the trade balance with the United States was unfavourable in 1934 to the extent of $23,472,761, compared with an unfavourable balance in 1933 of $27,443,575, and in 1932 of $43,314,645.

For a more detailed treatment of the commodities making up our export and import trade with the United States, see Tables **12** and **13** of this chapter.

Canadian Trade via the United States.—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1934 imports *via* the United States have decreased from 9·5 p.c. to 1·85 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages for the pa t eight fiscal years being: 1927, 39·4; 1928, 38·7; 1929, 36·6; 1930, 33·7; 1931, 27·3; 1932, 18·7; 1933, 14·2; 1934, 14·4. The decline has thus been very marked in the latest years. Details by countries are given in Table **21** of this chapter.

Trade with Other Foreign Countries.—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1934 are shown in Statement V below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries have increased from 4·5 p.c. to as high as 24·0 p.c. in 1929, declining to 18·4 p.c. in 1934.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 10 to 37 (pp. 153–188) of the Condensed Preliminary Report on the Trade of Canada, 1934, published by the Bureau of Statistics. These tables show the trade of Canada in leading commodities with 84 British and foreign countries for the fiscal years 1933 and 1934.

Subsection 5.—Geographical Distribution of Canadian Trade by Continents and Countries.

Canadian Trade by Continents, 1934.—In the latest fiscal year both exports of Canadian products and imports increased substantially, imports by $27,600,000 and exports by $105,500,000. Imports from the United Kingdom increased by $18,700,000 and from the United States by $5,700,000, while imports from "other Europe", "other North America" and Africa showed slight declines, and imports from South Africa, Asia and Oceania recorded minor increases. Of the increase in exports of Canadian products totalling $105,500,000, the United Kingdom accounted for $43,200,000, the United States for $51,300,000, Asia for $3,600,000, Oceania for $5,100,000, Africa for $4,000,000 and South America for $1,300,000. "Other Europe" and "other North America" recorded slight declines. Details respecting Canada's trade by continents, 1929 to 1934, are given in the following statement.

Imports from Principal Countries.—The following statement on imports from thirty-five leading countries in 1934 shows how predominant the two great English-speaking countries are as the source of supply of Canadian imports, the United States supplying approximately 55 p.c. of all our imports, while the United Kingdom, with less than half the share of the United States in our import trade, has, nevertheless, more than ten times as large a share as Germany, ranking third. Again it is to be noted that in 1934 three British countries, India, Australia and South Africa, took fifth, sixth and seventh places, respectively, in our import trade, ranking immediately after Germany and France. These same countries twelve years earlier ranked ninth, thirtieth and forty-fourth, respectively, in supplying us with imports and the change is indicative of the growing proportion of Empire trade to total trade.

Exports to Principal Countries.—Figures in the following statement, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as our customers. The third country, the Netherlands, takes from us only about 10 p.c. of the commodities taken by the United States. It may be noted that in the latest year the Netherlands and Belgium were our best customers on the continent of Europe, surpassing France and Germany in this respect, while Italy ranked only sixteenth as a customer compared with third in 1922. The relative positions of these countries are largely due, of course, to the attitudes taken by the various countries to imports of Canadian wheat, France, Germany and Italy all desiring to be independent of imported food supplies.

As among the Empire countries, the rise of British South Africa from sixteenth in 1922 to ninth in 1934 may be noted as of special significance, while Australia ranked sixth in 1934, as in 1922, and New Zealand was twelfth in 1934 as compared with thirteenth in 1922. In the Orient, Japan maintained fourth place in 1934, the same as twelve years earlier.

Statistical Tables of Trade by Countries.—Statistics showing the course of import and export trade during the latest five fiscal years, by countries with which Canada carries on trade, will be found in Tables **19** (imports) and **20** (exports). Table **21** shows by countries the values and percentages of goods imported into and exported from Canada *via* the United States for the latest two fiscal years.

A series of tables showing Canadian trade in principal commodities with the leading countries with which she trades (other than the United Kingdom and the United States, which are exhaustively dealt with in Tables **12** and **13**) followed Table **21** in the 1931 Year Book. These tables have since been omitted to economize space. They will be found in the Condensed Preliminary Report on the Trade of Canada 1934, (pp. 153-188). Historical tables showing our trade with leading countries in each year since Confederation, will be found on pp. 13-19 of the Annual Report of the Trade of Canada for 1934, both volumes published by, and obtainable from, the Dominion Bureau of Statistics.

Subsection 6.—Principal Commodities Imported and Exported.

Canada's Principal Imports.—Statement IX, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930 and 1934, the commodities being arranged in order of importance in 1934. In the interpretation of the trends in imports shown by the figures in this statement, the effect of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59·3 in the calendar year 1889, 52·1 in 1899, 59·5 in 1909, 134·0 in 1919, 95·6 in 1929 and 67·1 in 1933, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930 and 1934. In the matter of business fluctuations, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1934 the effects of the depression and price decline were still being severely felt, although there was a distinct improvement as compared with 1933.

During the period of 44 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus, aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only $161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, cotton goods and raw cotton, tea, grain products and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada.

IX.—CANADA'S LEADING IMPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, 1934.

Canada's Principal Exports.—Statement X, which follows, gives Canada's leading domestic exports for the fiscal years ended 1890, 1900, 1910, 1920, 1930 and 1934, arranged in descending order of importance in 1934. In the interpretation of these figures of the main commodities exported the same qualifications should

apply regarding price changes and business fluctuations as cited above in the case of imports.

Over the period of 44 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. Of the five leading exports in 1934 four were very unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1934 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, silver, lead, aluminium and platinum. Gold refined in Canada and exported as bullion is not shown in the table.

X.—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, 1934

NOTE.—Commodities arranged in order of importance, 1934.

No.	Commodity.	1890.	1900.	1910.	1920.	1930.	1934.
